Dear Mr. Hansen:

Plains Pipeline, L.P. is pleased to submit the attached Quarterly Report, dated August 13, 2010, for the C.S. Cayler release site located in Section 6 of Township 17 South, and Range 37 East of Lea County, New Mexico. This document summarizes the status of recent activities performed during the second quarter of 2010.

Should you have any questions or comments, please contact me at (575) 441-1099.

Sincerely,

Jason Henry

Dear Mr. Hansen:

Talon/LPE (Talon), submits this letter report on behalf of Plains Pipeline, L.P. (Plains) to summarize the second quarter 2010 groundwater monitoring activities.

Remediation Activities

During the second quarter of 2010, four (4) specific gravity skimmers with bladder pumps operated in monitoring wells MW-4, MW-5, MW-7, and MW-12, and three (3) total fluids pump operated in monitoring well MW-1A, MW-2, and MW-3. The skimmers and total fluids pumps are utilized to recover phase separated hydrocarbons (PSH) and to inhibit migration of the PSH and dissolved-phase plumes. The recovery system is maintained on a weekly basis in order to optimize efficiency and recovery rates.

Attachments to this letter report include a site plan, gradient map, and a PSH thickness isopleth map combined with dissolved-phase distribution in Appendix A. A synopsis of the historical groundwater gauging data and groundwater analytical results are provided in Appendix B and the laboratory analytical report with chain-of-custody are located in Appendix C.

During the second quarter, the system recovered approximately 1,941 barrels of water and 2,162 barrels of water was transferred to Three Forks Apollo salt water disposal facility. Approximately 41 barrels of crude oil was recovered by the

system during the second quarter and 14 barrels of crude oil was introduced into a Plains pipeline at their 34 Junction South facility.

Second Quarter Groundwater Monitoring Event

The second quarter 2010, a groundwater monitoring event was conducted on June 9, 2010. Prior to the event, the PSH recovery system was shut-down and the pumps were pulled in order to allow the potentiometric surface to stabilize. During the groundwater monitoring event, all monitor/recovery wells were measured with an interface probe to determine static water levels and PSH thicknesses if present. Groundwater samples were collected from monitor wells MW-6, MW-9, MW-10, MW-11, and MW-13 through MW-18. The samples were submitted to the laboratory for quantification of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA SW-846, Method 8021B. Groundwater samples were not collected from monitor wells MW-1A through MW-5, MW-7 and MW-12 due to the presence of PSH. A groundwater sample was not collected from monitor well MW-8 because groundwater levels had declined below the total depth of the well.

Results of the Groundwater Monitoring Event

Data collected from the February 2010 groundwater monitoring event exhibited the following results:

- Benzene concentrations ranged from <0.00100 mg/L to 0.0953 mg/L. Benzene concentrations exceeded the New Mexico Water Quality Control Commission (NMWQCC) remediation threshold of 0.010 mg/L in groundwater samples collected from monitor wells MW-6, MW-9, MW-13 and MW-16.
- Toluene concentrations ranged from <0.00100 mg/L to 0.00890 mg/L. All toluene concentrations were below the NMWQCC remediation threshold of 0.750 mg/L in groundwater samples collected from monitor wells not impacted with PSH.
- Ethylbenzene concentrations did not exceed the detection limit in any sample; therefore, all ethylbenzene concentrations were below the NMWQCC remediation threshold of 0.750 mg/L in groundwater samples collected from monitor wells not impacted with PSH.
- Xylene concentrations ranged from <0.00100 mg/L to 0.00480 mg/L. All xylene concentrations were below the NMWQCC remediation threshold of 0.620 mg/L in groundwater samples collected from monitor wells not impacted with PSH.
- Dissolved-phase concentrations remained relatively stable from the first quarter 2010 to the second quarter of 2010.
- PSH thicknesses exhibited significant declines in monitor wells MW-2, MW-5, and MW-12 and exhibited a significant increase in MW-1A near the core of the plume indicating

that the plume is contracting. The PSH thickness in MW-7 declined to non-detect supporting that the plume is contracting.

- Groundwater levels declined an average of 0.049 feet from the first quarter 2010 to the second quarter of 2010.

If you have any questions or require further information, please contact me at (432) 522-2133 or Mr. Jeffery Dann at (713) 646-4657.

Corrected Groundwater Elevation = Top of Casing Elevation - (Depth to Water Below Top of Casing - (SG)(PSH Thickness)) SG=0.835

** Estimated Product Thickness using Total Depth of Well as the Depth to Water.

ND = Not Detected

btoc = Below Top of Casing

amsl = Above Mean Sea Level

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 12 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director

Dr. Michael Abel, Project Manager

Standard Flags

B - The sample contains less than ten times the concentration found in the method blank.

Case Narrative

Samples for project were received by TraceAnalysis, Inc. on 2010-06-10 and assigned to work order 10061013. Samples for work order 10061013 were received intact without headspace and at a temperature of 3.7 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	60669	2010-06-11 at 08:30	70837	2010-06-11 at 23:57
BTEX	S 8021B	60678	2010-06-12 at 15:00	70842	2010-06-12 at 17:23

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10061013 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Dear Mr. Hansen:

Plains Pipeline, L.P. is pleased to submit the attached Quarterly Report, dated February 18, 2010, for the C.S. Cayler release site located in Section 6 of Township 17 South, and Range 37 East of Lea County, New Mexico. This document summarizes the status of recent activities performed during the first quarter of 2010.

Should you have any questions or comments, please contact me at (575) 441-1099.

Sincerely,

Jason Henry

Dear Mr. Hansen:

Talon/LPE (Talon), submits this letter report on behalf of Plains Pipeline, L.P. (Plains) to summarize the first quarter 2010 groundwater monitoring activities.

Remediation Activities

During the first quarter of 2010, six specific gravity skimmers with bladder pumps operated in monitoring wells MW-2 through MW-5, MW-7, and MW-12, and one total fluids pump operated in monitoring well MW-1A. On March 18, 2010, the skimmers were replaced in monitor wells MW-2 and MW-3 by total fluids pumps. The skimmers and total fluids pumps are utilized to recover phase separated hydrocarbons (PSH) and to inhibit migration of the PSH and dissolved-phase plumes. The recovery system is maintained on a weekly basis in order to optimize efficiency and recovery rates.

Attachments to this letter report include a site plan, gradient map, and a PSH thickness isopleth map combined with dissolved-phase distribution in Appendix A. A synopsis of the historical groundwater gauging data and groundwater analytical results are provided in Appendix B and the laboratory analytical report with chain-of-custody are located in Appendix C.

During the first quarter, the system recovered approximately 928.5 barrels of water and 953.2 barrels of water was transferred to Three Forks Apollo salt water disposal facility. Approximately 19 barrels of crude oil was recovered by the system during the first quarter.

Fourth Quarter Groundwater Monitoring Event

The first quarter 2010 groundwater monitoring event was conducted on February 18, 2010. Prior to the event, the PSH recovery system was shut-down and the pumps were pulled in order to allow the potentiometric surface to stabilize. During the groundwater monitoring event, all monitor/recovery wells were measured with an interface probe to determine static water levels and PSH thicknesses if present. Groundwater samples were

collected from monitor wells MW-6, MW-9, MW-10, MW-11, and MW-13 through MW-18. The samples were submitted to the laboratory for quantification of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA SW-846, Method 8021B. Groundwater samples were not collected from monitor wells MW-1A through MW-5, MW-7 and MW-8 and MW-12 due to the presence of PSH.

Results of the Groundwater Monitoring Event

Data collected from the February 2010 groundwater monitoring event exhibited the following results:

- Benzene concentrations ranged from <0.00100 mg/L to 1.36 mg/L. Benzene concentrations exceeded the New Mexico Water Quality Control Commission (NMWQCC) remediation threshold of 0.010 mg/L in groundwater samples collected from monitor wells MW-6 and MW-16.
- Toluene concentrations ranged from <0.00100 mg/L to 0.0375 mg/L. All toluene concentrations were below the NMWQCC remediation threshold of 0.750 mg/L in groundwater samples collected from monitor wells not impacted with PSH.
- Ethylbenzene concentrations ranged from <0.00100 mg/L to 0.0456 mg/L. All ethylbenzene concentrations were below the NMWQCC remediation threshold of 0.750 mg/L in groundwater samples collected from monitor wells not impacted with PSH.
- Xylene concentrations ranged from <0.00100 mg/L to 0.0773 mg/L. All xylene concentrations were below the NMWQCC remediation threshold of 0.620 mg/L in groundwater samples collected from monitor wells not impacted with PSH.
- Dissolved-phase concentrations remained relatively stable from the fourth quarter 2009 to the first quarter of 2010 except monitor well MW-6 exhibited an increase in benzene concentration of 0.95 mg/L.
- PSH thicknesses remained stable from the fourth quarter 2009 to the first quarter of 2010 except for significant declines of approximately three (3) feet each in monitor wells MW-1A and MW-4.
- Groundwater levels increased by an average of 0.079 feet from the fourth quarter 2009 to the first quarter of 2010.

If you have any questions or require further information, please contact me at (432) 522-2133 or Mr. Jeffery Dann at (713) 646-4657.

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 12 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director

Standard Flags

B - The sample contains less than ten times the concentration found in the method blank.

Case Narrative

Samples for project C.S. Cayler were received by TraceAnalysis, Inc. on 2010-02-19 and assigned to work order 10021935. Samples for work order 10021935 were received intact without headspace and at a temperature of 3.9 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	58042	2010-02-25 at 14:00	67848	2010-02-25 at 17:21
BTEX	S 8021B	58049	2010-02-26 at 10:00	67875	2010-02-26 at 08:22

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10021935 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Toluene	0.0887	mg/L	1	0.100	<0.000200	89	75 - 111.8
Ethylbenzene	0.0889	mg/L	1	0.100	<0.000200	89	78.8 - 106.6
Xylene	0.268	mg/L	1	0.300	<0.000900	89	68.9 - 114

Percent recovery is based on the spike result. RPD is based on the spike and spike duplicate result.
