French Dr , Hobbs, NM 88240 Form C-141 Energy Minerals and Natural Resource Revised October 10, 2003 District II HOBBSOCD 1301 W Grand Avenue, Artesia, NM 88210 District III Submit 2 Copies to appropriate Oil Conservation Division 1000 Rio Brazos Road, Aztec, NM 87410 District Office in accordance 1220 South St. Francis Dr. District IV with Rule 116 on back 1220 S St Francis Dr , Santa Fe, NM 87505 side of form Santa Fe, NM 87505 **Release Notification and Corrective Action OPERATOR** Initial Report Final Report Name of Company: Arena Resources, Inc. Contact: Fred Holmes Address: 2130 W. Bender Blvd. - Hobbs, NM Telephone No.: 575-738-1739 or 432-631-3757 Facility Name: East Hobbs San Andres Unit #210 Facility Type: Oil Well Surface Owner: Mineral Owner: Lease No.: 30-025-39222 LOCATION OF RELEASE Feet from the North/South Line Feet from the East/West Line Unit Letter Section Township Range County Ĥ 30 18S 39E 2590 Ν 460 E Lea Latitude: 32 43' 6.7" Longitude: -103 4' 37.7 NATURE OF RELEASE Type of Release: Drilling Fluid Volume of Release: ~10 bbls Volume Recovered: 0 Source of Release: Drilling Operations Date and Hour of Occurrence: Date and Hour of Discovery: December 2008 January 2009 Was Immediate Notice Given? If YES, To Whom? Yes No Not Required By Whom? Date and Hour: Was a Watercourse Reached? If YES, Volume Impacting the Watercourse. ☐ Yes ⊠ No If a Watercourse was Impacted, Describe Fully.\*: Describe Cause of Problem and Remedial Action Taken.\*: Following the drilling and completion of the well, it was discovered that some drilling fluid had impacted soils undeneath the liner of the trench used to set roll-off boxes that were used accumulate drill solids. The impacts were discovered after the drilling rig had moved off site. Describe Area Affected and Cleanup Action Taken.\* : About 1100 cubic yards of impacted soils were excavated and staged on-site prior to soil washing. Soils were sampled at various depth intervals to evaluate the progress of the remediation. Excavation was terminated when chloride concentrations were below action levels. As per the corrective action plan prepared on July 28, 2009 and submitted to NMOCD, impacted soils were washed in stages using fresh water in a twochamber pit that was constructed at the site of the original excavation. The soils were periodically sampled for cholirde concentrations using a field titration kit. Additionally confimration samples were analyzed by an independent lab. About 300 cubic yards of the excavated material was judged to be too contaminated to wash, and this material was manifested off-site for disposal. The remining soils were washed until the chloride concentrations were below action levels. The soils were staged back into the soil washing pit over the pit's base liner and compacted. The excavation was brought up to grade with clean soil. I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. # Remediation Summary Report Form

# **General Information**

This section provides general information about the operator and the site where the spill occurred.

Date:	07/08/10				
Client:	Arena Reso	urces			
Site Nam	e: East Hob	bs San Andres	s Unit #210	County: Lea	State: NM
Site Cool	rdinates		32° 43' 6.7" -103° 4' 37.7"		
Property State Rep		Arena Resou	rces		

# **Release Description and Assessment**

The information below is related to the spill (Date, Type, Cause and Quantity) and the area impacted.

Date of Spill:	~12/1/2008
Type of Spill:	Oil Produced Water Condensate Other (Specify): Drilling Mud (Brine)
Cause of Spill:	☐ Equipment Failure ☐ Valve Failure ☐ Line Rupture ☐ Leaking Tank ☐ Tank Overfill
	used as temporary tanks in a closed-loop drilling system. Leaks in the liner allowed brine to infiltrate the soils below the upper and lower trenches that were used to position the boxes.
Other Contribution	ng Factors or Comments:
<b>Quantity Spilled:</b>	~10 bbls. Quantity Recovered: 0 bbls. Total Released: 0 bbls.
Method of Recov	rery: 🗌 Vacuum Truck 🔄 Other (Specify):
OCD Notified:	Yes 🗌 No C-141 Completed and Submitted: 🛛 Yes 🗌 No
Spill Area Impact	ted: 🗌 Inside Firewall 🛛 🗍 On Production Pad 🔄 In Pasture 🔲 In Cultivated Land
	Other (List): Soils under the liner inside the upper and lower trenches.
Total Square Foo	tage Impacted: ~3000 Estimated Depth: 1-7' Volume (Cu. Yds): ~1100

Other Comments:

# **Remediation Activity Summary**

# The following summarizes the activities used to remediate the spill.

The EHSAU 210 was drilled using a closed-loop mud system. The drilling contractor placed roll-off boxes in a two-tier trench to accumulate drill solids. After the rig was removed from the site, some drilling fluids and soil residuals were observed in the trenches (see Photo #1). Visual inspection found several penetrations of the liner. After the liner was removed, initial sampling found chloride levels ranging from 28,000 mg/kg (lower south trench) to 48 mg/kg (upper north and south trenches) and TPH levels below action levels (all samples <10 ppm).

About 1100 cubic yards of impacted soils were excavated and stacked on-site prior to soil washing operations. The excavation was sampled at various depth intervals to evaluate the progress of the remediation. Excavation was terminated when chloride concentrations were below action levels (see Photo #2).

# Analytical Summary

Sample #	Depth (ft)	Date	TPH C6-C10	TPH C10-C28	Total TPH	Chl
Upper N	0.00	1/20/09	<10	<10	NA	48
Upper S	0.00	1/20/09	<10	<10	NA	48
Lower C	0.00	1/20/09	<10	<10	NA	288
Upper C	1.00	2/11/09	NA	NA	NA	16
Lower N	6.00	2/11/09	NA	NA	NA	32
Lower S*	7.50	3/20/09	NA	NA	NA	32

Results of analyses following the excavation of the affected soil are as follows:

\* This sample was mislabeled as Lower C in the analytical results.

# **Remediation of Affected Soils**

About 800 cubic yards of chloride contaminated soils were remediated on-site using freshwater to dissolve the salt in the soils. About 300 yards of material was judged to be too contaminated to be washed. This material was manifested offsite for disposal.

The soil washing operation was conducted in a two-chamber pit that was constructed at the site of the original excavation (see Figure 1). The soil wash pit was excavated to be about 210' long overall and about 15' wide. The pit was sloped from a depth of about 10' to about 12'. This pit was covered with a bottom liner of 40 mil polyethylene (see Photo #3). A soil retaining wall was constructed inside the trench (see Photo #4) to provide a soil washing chamber about 140' x 15' and a wash water collection chamber about 20' x 15'. The chambers were connected by means of a drain line. A layer of 3'' minus gravel was placed in the bottom of the soil wash chamber and the chamber was over lined with geotextile.

Soil was added to the wash cell in batches and mixed with fresh water. The water dissolved the salt in the soils, drained through the geotextile and gravel layer, and was carried via the drain line into the wash water collection pit. Water from the collection pit was pumped out and disposed off along with the produced water from the location. The soils in the wash pit were periodically sampled for chloride concentrations in the field using a HAUC Quantalab ® low range titrator using Standard Method 4500 CIB. This procedure is identical to the analytical procedure used by third-party labs. Confirmation samples were also collected and sent to a third-party lab.

After field samples indicated that the chloride concentration in the washed soils was below 100 mg/kg, additional contaminated soil was added to the wash cell and mixed with the clean soil. Then the entire contents of the cell were again washed with water. The washing and testing procedure was repeated until the mixed soils had a chloride concentration below 100 mg/kg. In this way, all the contaminated soil were staged into the wash cell in batches (except for the most heavily contaminated materials, which were manifested offsite for disposal). A picture of the wash pit after all soil had been added is included (see Photo #5). A tabulation of the analytical results of the soil washing operation is included as Table 1.

# Final Site Restoration

After the soil washing operation was complete, the soil level in the wash pit was about 3.5' below grade. The original bottom liner was trimmed and the liner edges were buried in a retaining trench (see Photo #6). The wash chamber was also filled in (see Photo #7). New soil was brought from nearby locations where it had been stockpiled and was used to bring the excavation to grade. Finally, the area was regraded to establish appropriate elevations (see Photo #8).

# **Conclusion**

A review of the analytical data indicated that the samples collected from the original remediation excavation are within the Oil Conservation Division (OCD) regulatory threshold limits for chlorides. Furthermore, analytical data from the soil washing operation indicated that the affected soils have been effectively remediated to below the OCD regulatory limit for chlorides. These soils were left in-place after

washing and the wash pit liner has also been left in place to limit potential contamination from future spills. Based upon this information it has been determined that remediation of the site is complete. Copies of soil manifests, analytical reports and photographs are attached.
