If a Watercourse was Impacted, Describe Fully.*:		
Describe Cause of Problem and Remedial Action Taken.*: Following the drilling and completion of the well, it was discovered that some drilling fluid had impacted soils underneath the liner of the trench used for the roll-off boxes as part of the closed-loop system. Impact was discovered after the liner was removed.		
Describe Area Affected and Cleanup Action Taken.*: Soils impacted with chlorides above regulatory action levels were removed from the trench and staged onto plastic. A corrective action plan was developed and submitted to the OCD Hobbs office for approval and implementation. The approved corrective action involved washing the impacted soil with freshwater until the chlorides were below action levels. Water from the soil washing process would be removed and sent to the facility produced water tanks for disposal. Once all of the impacted soils were cleaned, the exposed plastic is removed and the remainder of the trench backfilled with clean fill material.

Remediation Summary Report Form

General Information

This section provides general information about the operator and the site where the spill occurred.

Date: 07/08/10

Client: Arena Resources

Site Name: East Hobbs San Andres Unit #813

County: Lea

State: NM

Site Coordinates Latitude: 32° 42' 42.3"

Longitude: 103° 4' 29.9"

Property Owner: Arena Resources

State Report No.:

Release Description and Assessment

The information below is related to the spill (Date, Type, Cause and Quantity) and the area impacted.

Date of Spill: ~12/1/2008

Type of Spill: ☐ Oil ☐ Produced Water ☐ Condensate ☒ Other (Specify): Drilling Mud (Brine)

Cause of Spill: ☐ Equipment Failure ☐ Valve Failure ☐ Line Rupture ☐ Leaking Tank ☐ Tank Overfill
☒ Other (List): Leak in the liner used as secondary containment for roll-off boxes. The boxes were used as temporary tanks in a closed-loop drilling system. Leaks in the liner allowed brine to infiltrate the soils below the upper and lower trenches that were used to position the boxes.

Other Contributing Factors or Comments:

Quantity Spilled: ~10 bbls. Quantity Recovered: 0 bbls. Total Released: 0 bbls.

Method of Recovery: ☐ Vacuum Truck ☐ Other (Specify):

OCD Notified: ☒ Yes ☐ No C-141 Completed and Submitted: ☒ Yes ☐ No

Spill Area Impacted: ☐ Inside Firewall ☐ On Production Pad ☐ In Pasture ☐ In Cultivated Land

☒ Other (List): Soils under the liner inside the upper and lower trenches.

Total Square Footage Impacted:

Estimated Depth: 1-6' Volume (Cu. Yds): ~592

Other Comments:

Remediation Activity Summary

The following summarizes the activities used to remediate the spill.

The EHSAU 813 was drilled using a closed-loop mud system. The drilling contractor placed roll-off boxes in a two-tier trench to accumulate drill solids. After the rig was removed from the site, some drilling fluids and soil residuals were observed in the trenches. Visual inspection found several penetrations of the liner. After the liner was removed (see Photo #1), initial sampling found chloride levels ranging from 7,600 mg/kg (lower south trench) to 48 mg/kg (upper north trench) and TPH levels below action levels (highest was <10 mg/kg). The initial form C-141 was submitted to NMOCD on April 16, 2010.

About 592 cubic yards of impacted soils were excavated and staged onto plastic prior to being sent offsite for disposal. Soils were sampled at various depth intervals to evaluate the progress of the remediation. Excavation was terminated when chloride concentrations were below action levels (see Photo #2). Once all of the impacted soils were removed, clean soil from the location was to bring the excavation area to grade (see Photo #3 & #4). Final form C-141 has been prepared and is attached.

Analytical Summary

Results of analyses following remediation activities are as follows:

Sample #	Depth (ft)	Date	TPH C6-C10	TPH C10-C28	Total TPH	Chl
Upper N	0.00	12/19/08	NA	NA	NA	48
Upper S	0.00	12/19/08	NA	NA	NA	80
Lower N	0.00	12/19/08	NA	NA	NA	256
Upper C	2.00	01/16/09	<10	<10	NA	16
Lower S	3.00	01/16/09	<10	<10	NA	128
Lower S	4.00	02/11/09	NA	NA	NA	208
Lower C	3.00	02/11/09	NA	NA	NA	64

A review of the analytical data indicated the sample is within the Oil Conservation Division (OCD) regulatory threshold limits. Based upon this information it has been determined that remediation of the site is complete. Copies of soil manifests, analytical reports and photographs are attached.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of services hereunder by Cardinal, regardless of whether such claim is based upon any of the above-stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.
