Mike,

Per our meeting this morning at your office, Yates will excavate impacted soils at the above location. The excavation will be an area of 12' wide x 12' wide X 20' deep (where the production tank was), impacted soils will be taken to an NMOCD approved facility. Based on analytical results once the soils have been excavated no further samples will be required and soils below the excavation can remain in-place. When the excavation work is completed Yates will submit a Final Report C-141 requesting closure and a request will be made for backfill work to begin. A work plan will be submitted to outline this work also.

If you have any questions please call me.

Thank you.

**Robert Asher**
