Attention: Mr. Daniel Sanchez
Acting Division Director

Re: Unorthodox Well Location
Turner No. 10
API No. (N/A)
467' FSL & 1332' FEL, Unit O
Section 29, T-21 South, R-37 East, NMPM,
Lea County, New Mexico

Dear Mr. Sanchez:

Pursuant to Division Rule 19.15.15.13, Apache Corporation ("Apache") respectfully requests administrative approval of an unorthodox oil well location for its proposed Turner Well No. 10. This well will be drilled as a development oil well in the Blinebry Oil & Gas Pool (Oil-6660) and Tubb Oil & Gas Pool (Oil-60240).

In the Blinebry and Tubb Oil & Gas Pools, the Turner No. 10 will be dedicated to an existing 40-acre oil spacing and proration unit comprising the SW/4 SE/4 of Section 29. This unit is currently dedicated in the Blinebry and Tubb Oil & Gas Pools to the Apache Corporation Turner Well No. 7 (API No. 30-025-39691) located at a standard well location 660 feet from the South line and 1980 feet from the East line of Section 29.

The Blinebry and Tubb Oil & Gas Pools are currently governed by the General Rules and Regulations for the Prorated Gas Pools of New Mexico/Special Rules and Regulations for the Blinebry and Tubb Oil & Gas Pools as established by Order No. R-8170, as amended. These rules require standard 160-acre gas spacing and proration units and 40-acre oil spacing and proration units. The setback requirement for oil wells and gas wells to which no more than 40 acres is dedicated is 330 feet to the outer boundary of the spacing unit.

The Turner No. 10 is being drilled at a 20-acre infill location in order to recover remaining oil and gas reserves underlying the S/2 SE/4 of Section 29. Although the SE/4 SE/4 of Section 29 has not yet been developed in the Blinebry and Tubb Oil & Gas Pools, Apache anticipates drilling a well on that tract in the near future.

Due to drainage considerations, a well at the proposed location should recover additional oil and gas reserves from the target reservoirs that will otherwise not be drained by the existing well(s), thereby preventing waste.

In support of the application, the following tables show drainage area, estimated ultimate oil and gas recoveries, cumulative oil and gas production (as of 10/2010) and current daily oil and gas producing rates for the Turner No. 7. (Note: drainage areas were calculated from SophiH taken off contoured isopach maps or from log calculations.)

Operator	Well Name	Unit	Reservoir	SophiH (Ft)	Area (Acres)	EUR (MBO)	EUR (MMCFG)
Apache	Turner No. 7	0	Blinebry/Tubb	9	3.2	19	762

Operator	Well Name	Unit	Reservoir	Cum Oil	Cum Gas	Daily Oil	Daily Gas
				(BO)	(MMCFG)	(Bbls)	(MCFG)
Apache	Turner No. 7	0	Blinebry/Tubb	459	32.5	3.76	266

Utilizing the average offset drainage areas and SophiH and applying it to the proposed location for the Turner No. 10 results in an estimated recovery of 32 MBO and 3,200 MMCF of gas from the Blinebry and Tubb reservoirs.

The affected offset acreage in the Blinebry Oil & Gas and Tubb Oil & Gas Pools is the SE/4 SE/4 of Section 29. This affected offset acreage is operated by Apache and is contained within the commonly-owned Turner lease. Consequently, notice of this application is not required.

In summary, approval of the application will provide Apache Corporation the opportunity to recover additional oil and gas reserves from the Blinebry and Tubb formations underlying the SW/4 SE/4 of Section 29 that may otherwise not be recovered by the existing producing well, thereby preventing waste, and will not violate correlative rights.

If you should have any questions, please call me at (505) 690-9453.

Sincerely,

David Catanach, Agent Apache Corporation 6120 S. Yale, Suite 1500 Tulsa, Oklahoma 74136
