Mr. Dan Nutter **Oil Conservation Commission** P. 0. Box 2088 Santa Fe, New Mexico

> Re: Application for Expansion of a Pilot Waterflood Project Approved by Oil Conservation Commission Order No. R-1433 Brown Pool, Chaves County New Mexico

Dear Sir:

In accordance with our telephone conversation of this week, we are herewith applying for permission to convert wells E-92 No. 13, No. 18 and No. 19 to water injection as an expansion of the subject waterflood, which was commenced by Mr. J. W. Brown in July of 1959. Mercury Production Company has purchased all of the leases in the subject field from the State of New Mexico and from the estates of Mr. Brown and his partner, Mr. Coll.

For the past year we have been diligently analyzing the results of Mr. Brown's injection in order to determine why his project had not been successful. In our opinion, the principal reason for its failure has been a highly permeable thief zone in the base of the oil sand. We have identified this thief zone as being present throughout the productive area of the field from our drilling during the past two months, and we have taken special precautions in our drilling and cementing program to assure the proper re-entry of water into the pay zone in our future waterflood development.

We have drilled eight new wells in the project (State E-92 wells 12, 13, 14, 15, 16, 17, 18 and 19) and have used the same completion procedure on all of these wells. The wells were drilled and cored through the pay zone, utilizing a 7-7/8" hole. Four and one-half inch 9.5# J-55 casing was then set through the pay zone and cemented with sufficient Incor cement to completely fill the annulus space from total depth to the surface. The joints of casing opposite the pay zone were coated with an epoxy granular substance to improve bonding and 18% salt and 3/4% fluid loss additive were added to the cement slurry to further improve the bonding characteristics of the cement. These wells were selectively perforated with jet shots and fracture treated by the limited re-entry technique, and from the results of the treatment to date we feel certain that we have contained our fracture treatment to the pay zone while excluding the troublesome thief zone.

Dan Nutter January 27, 1967

Injectivity tests indicate that wells E-92 Nos. 6 and 9 (present active injection wells) are not in communication with this thief zone, but we have determined that wells E-92 Nos. 2, 7 and 8 are in direct communication to the extent that injection into them channels in a period of days to offset producing wells. It is, therefore, respectfully requested that we be granted administrative approval to plug with cement wells E-92 Nos. 2, 7 and 8 and to convert wells E-92 Nos. 13, 18 and 19 to injection so that we can go ahead with water injection in the project. These wells are marked in red on the attached plat and we have attached a schematic diagram of a typical new well completion for your information.

A copy of this application is being sent to Mr. Frank Irby, office of the State Engineer in Santa Fe.

Your kind cooperation in this matter will be greatly appreciated.

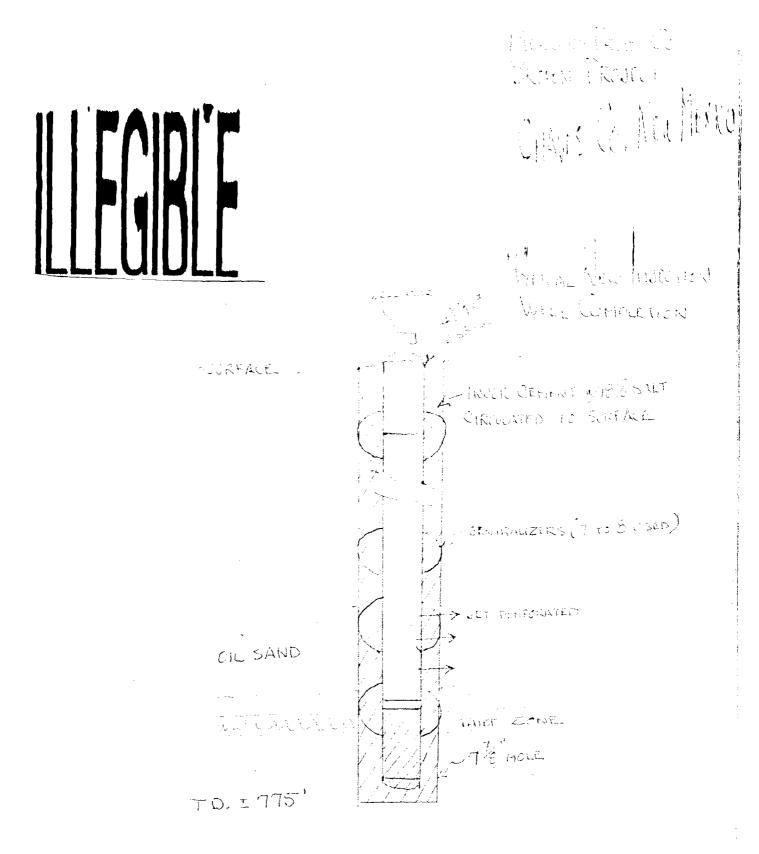

Yours very truly,

Frank Carden

Re: State E-92 Well Lo. 9

-0

ILLEGIBLE

Dear Mr. Brown:

Reference is made to your latter of December 19, 1903, wherein you request authority to convert your Selts E 52 Well No. 9, located 1310 feet from the North Line and 1630 feet from the West line of Section 20, Township 10 South, Range 26 East, Brown Pool, Chaves County, New Mexico, 10 a water injection well. It is our understanding that this well was originally drilled as a producer, but that it is now needed to fill out the desired water injection pattern for the waterflood project which you are operating in the aforesaid pool. It is our understanding further that this well was drilled to a total depth of 800 feet, that 800 feet of 4 1/2inch casing was set at total depth and cemented with 100 sacks of cement. Water injection will be into the Penross member of the Queen formation through 144 perforations from approximately 750 to 785 feet.

Inasmuch as the aforesaid casing and cementing program appear to be adequate for water injection purposes in this waterflood, the conversion of the subject Well No. 9 to water injection at the aforesaid unorthodox location is horeby approved.

Very truly yours, Perter, L.

A. L. PORTER, Jr. Secretary-Director

Re: State E-92 Well No. 9

Dear Mr. Brown:

Reference is made to your letter of December 19, 1963, wherein you request authority to convert your State E-92 Well No. 9, located 1310 feet from the North line and 1980 feet from the West line of Section 26, Township 10 South, Range 26 East, Brown Pool, Chaves County, New Mexico, to a water injection well. It is our understanding that this well was originally drilled as a producer, but that it is now needed to fill out the desired water injection pattern for the waterflood project which you are operating in the aforesaid pool. It is our understanding further that the well was drilled to a total depth of 600 feet, that 800 feet of 4 1/2-inch casing was set at total depth and cemented with 100 sacks of cement. Water injection will be into the Penrose member of the Queen formation through 144 perforations from approximately 750 to 785 feet.

Inasmuch as the aforesaid casing and cementing program appear to be adequate for water injection purposes in this waterflood, the conversion of the subject Well No. 9 to water injection at the aforesaid unorthodox location is hereby approved.

Very truly yours,

A. L. PORTER, Jr. Secretary-Director

> Subject: State E-92 Well No. 9 Brown Field Chaves County, New Mexico

Dear Jim:

Since our telephone conversation of the other day, I have dug into the well file on Well E-92 No. 9, and found the attached correspondence pertaining to authorization for injecting water in that well. I am enclosing a copy of the approved application to convert this well and a copy of Mr. Potter's letter concerning the casing program.

I am also sending a copy of this correspondence to Mr. Irby in the State Engineer's Office.

I trust this will be sufficient for going forward with the injection in this well.

Very truly yours,

Frank Darden for Mercury Production Company

Mercury Production Company 508 Fort Worth National Bank Building Fort Worth, Texas 76102

Attn. Mr. Frank Darden

Dear Mr. Darden:

Reference is made to your application to the Oil Conservation Commission which seeks authority for expansion of your Pélot Waterflood Project approved by Order R-1433 in the Brown Pool, Chaves County. In examining the typical new injection well completion, it is noted that no depths are given except for the total depth which is 775 feet. Please furnish the approximate depth to the top of the oil sand, the bottom of the oil sand, the top of the Thief Zone and the bottom of the Thief Zone, and the approximate depth of the perforations which will naturally be in the oil sand. Please state the type of formation between the oil sand and the Thief Zone, i.e., sandstone, limestone, shale, etc.

In reviewing the transchipt and exhibits of the original hearing held on June 24, 1959, it is noted that you expected to obtain the water supply for the project from the M. G. Peters #1 Gulf State well in the SEMSENWA of Sec. 23, T. 10 S., R. 26 E., which was then being tested in a zone at 400 feet. It is also noted that the Treat-rite Water Lab report shows this water to be highly corrosive and that it must be kept in a closed and lined system and that the well was expected to produce approximately 240 barrels per day and that the drilling of additional wells in the same aquifer was contemplated. Please advise as to whether this source of water is being used. If this source is not being used, please advise as to the source of water and its analysis. Please also advise as to whether the water is being injected through cement lined tubing and is in a closed system as originally proposed. . .

ADDRESS CORRESPONDENCE TO: STATE CAPITOL SANTA FE, NEW MEXICO 87501

Mr. A. L. Porter, Jr. Secretary-Director Oil Conservation Commission Santa Fe, N. M.

Attn. Mr. Dan Nutter

Gentlemen:

Reference is made to the application of Mercury Production Company which seeks authority for expansion of the waterflood project in the Brown Pool of Chaves County, which was approved **b**y Order R-1433. Further reference is made to my letter of February 8, 1967 addressed to Mercury Production Company and to Mercury Production Company's reply to my letter pertaining to the subject application. There is no indication that you received a copy of the February 10th letter of Mercury Production Company addressed to me. Therefore, I am reproducing and sending to you a copy of the letter and a copy of the analysis report which is attached to the letter. It appears that the original proposed water supply well is not being used and that the water supply wells in Sec. 25 are of much higher quality than the well in Sec. 23.

In view of the answers to the questions contained in my letter of February 8, 1967, it does not appear that the approval of the application would constitute a threat to any fresh waters which may exist in the area. Therefore, this office offers no objection to the granting of the application.

FEI/ma encl. cc-Mercury Production Co. Yours truly,

S. E. Reynolds State Engineer
