Devon Energy Production Company LP request approval to perform a casing exit from the existing casing @approx 10,900 and drill to a projected target 50 North and 50 West of the surface location to test the Devonian formation with a projected TD of 15,003 MD and 15,000 TVD. Prior to this work the existing Atoka perforations will be abandoned by setting a CIBP @approx 12,000 and capping with 35ft cement. A CIBP will then be set at 10,900 and a casing bottom trip whipstock will be set on top of the CIBP. See attached for cement and casing designs.
