Included herewith is our Authority for Expenditure ("AFE") in the gross amount of \$4,146,651, being the total estimated cost to drill and complete said well.

Chisholm is proposing to drill this well under the terms of the modified 1989 AAPL form of Operating Agreement which is enclosed for your review and approval. The Operating Agreement covers Section 34, Township 20 South, Range 34 East, limited to the Bone Spring Formation. It has the following general provisions:

- 100/300 Non-consenting penalty
- \$10,000/\$1,000 Drilling and Production rate
- Chisholm Energy Operating, LLC named as Operator

Great Western Drilling Company will own an approximate 43.75% working interest in the well, subject to title verification. Please indicate your participation election in the space provided below, sign and return this letter, along with a signed copy of the enclosed AFE and a copy of your geologic well requirements, to my attention at the letterhead address. You may also email your response to lshelton@chisholmenergy.com

Should you have any questions, please do not hesitate to contact myself at 817-953-0359.

Very truly yours,

Chisholm Energy Operating, LLC

Estimate is for a 16,155' MD horizontal 3rd Bone Spring well in Lea County, NM. This AFE assumes 22 days to drill. The rig will move in and set a surface string at ~1820'. Intermediate casing will be set at ~5,700' with a stage tool and ACP. An 8-3/4" hole will be drilled to pilot hole TD of 12,000 TVD where a full suite of logs will be run and sidewall cores will be collected at varying depths. The well will then be plugged back to KOP (~10,700' MD). From there, a curve will be built to 90° in the 3rd Bone Spring and drilled to TD (approx. 4,621' VS & 4,000' LL). The well will be completed with 5-1/2", 17#, P-110, BTC production casing cemented through the lateral and up to 500' inside intermediate casing. The well will be completed with 20 stages (210'/stage) using the P&P completion technique. The completion will use a 315K pound per stage slickwater design resulting in a lateral treatment of 1,500 #/ft.

The well will be completed with 5-1/2", 17# P-110, BTC production casing cemented through the lateral and up to 500' inside intermediate casing. The well will be completed with 20 stages (210'/stage) using the P&P completion technique. The completion will use a 315K pound per stage slickwater design resulting in a lateral treatment of 1,500 #/ft.
