Hello Mike:

Thanks for this. Only one thing left to check.

If you have access to commercial production/injection data - would you please send a plot of the NW Artesia Unit from the date of initiation of the waterflood until today and include the injection rates on this plot?

Regards,

William V. Jones PE

This is the well you & I talked about yesterday on the phone.

It appears that this well started injection in 1982 as per the attached WFX-498 although I still can't find the order on the State web site. The well was an active injection well until 1996 when a previous operator applied to convert it to a producer. The conversion to producer was never done, and the well has remained shut-in (injection) since that time. The current injection permit may have expired. Lime Rock would like to resume previously permitted injection operations.

Do we still have to go through a full C-108 application???
