RE: San Juan 32-5 Unit, # 14-08-001-534
San Juan County, New Mexico
Fruitland Coal Participating Area
Initial Expansion, effective April 30, 2000
First Expansion, effective May 1, 2001
Second Expansion, effective October 1, 2001
Third Expansion, effective November 1, 2001
Fourth Expansion, effective December 1, 2001
Fifth Expansion, effective August 1, 2002
Sixth Expansion, effective September 1, 2002
Seventh Expansion, effective November 1, 2002
Eighth Expansion, effective August 1, 2003
Ninth Expansion, effective November 1, 2003

Dear Sir or Madam:

By letter dated November 14, 2005, Energen Resources Corporation submitted the Initial through the Ninth Expansions for your review and approval. None of the agencies listed have approved these Expansions as of this date.

A more thorough review of these Unit Expansions has indicated that additional acreage should be included in the Eighth and Ninth Expansions as a result of being proven productive by geologic inference.

Enclosed for your review are geologic structure, isopach and production maps, two cross sections and a geologic write-up explaining our conclusions. A revised Expansion Schedule for both the Eighth and Ninth Expansions and Eighth and Ninth Expansion maps are also included.

The revised Expansion Schedules for the Eighth and the Ninth Expansions are enclosed. The schedules describe the Participating Areas and show the percentages of unitized substances allocated to the Tracts according to the ownership within the Tracts.

We would appreciate your including the above along with the materials previously furnished and consider all of the Expansions for approval as soon as possible. Please contact the undersigned at (505) 326-6162 if there are any questions regarding this matter. Copies of this letter are being furnished to the Working Interest owners on the attached list.

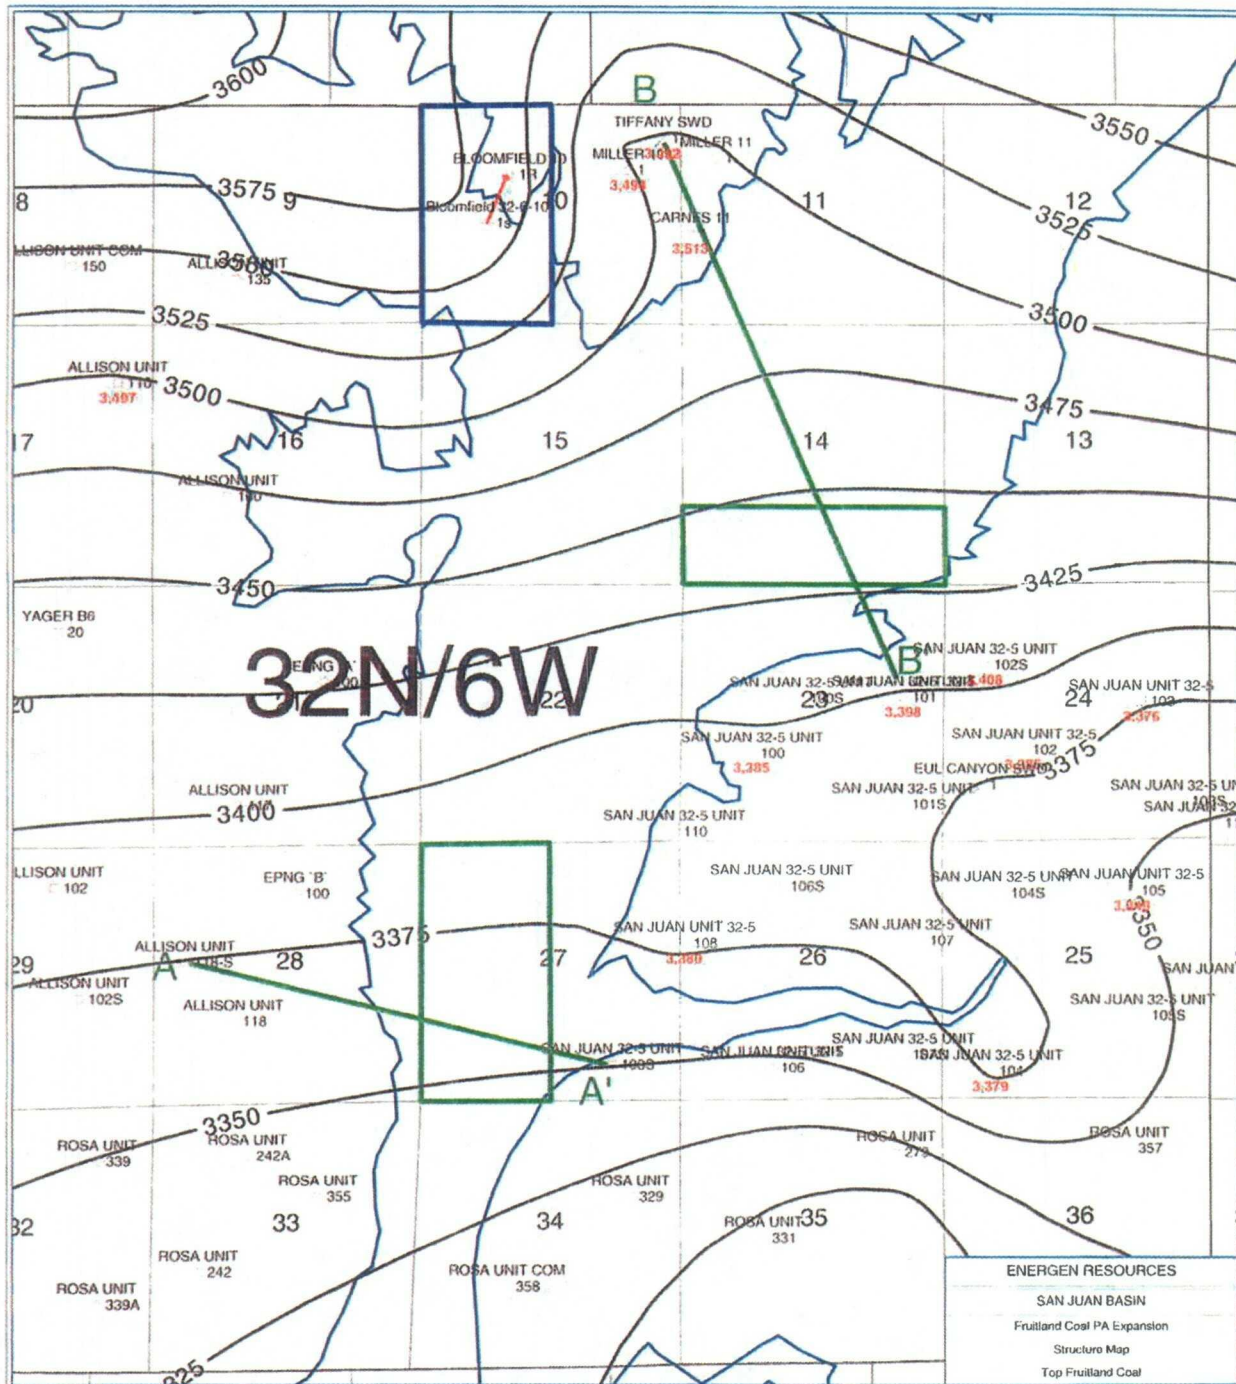

Very truly yours,

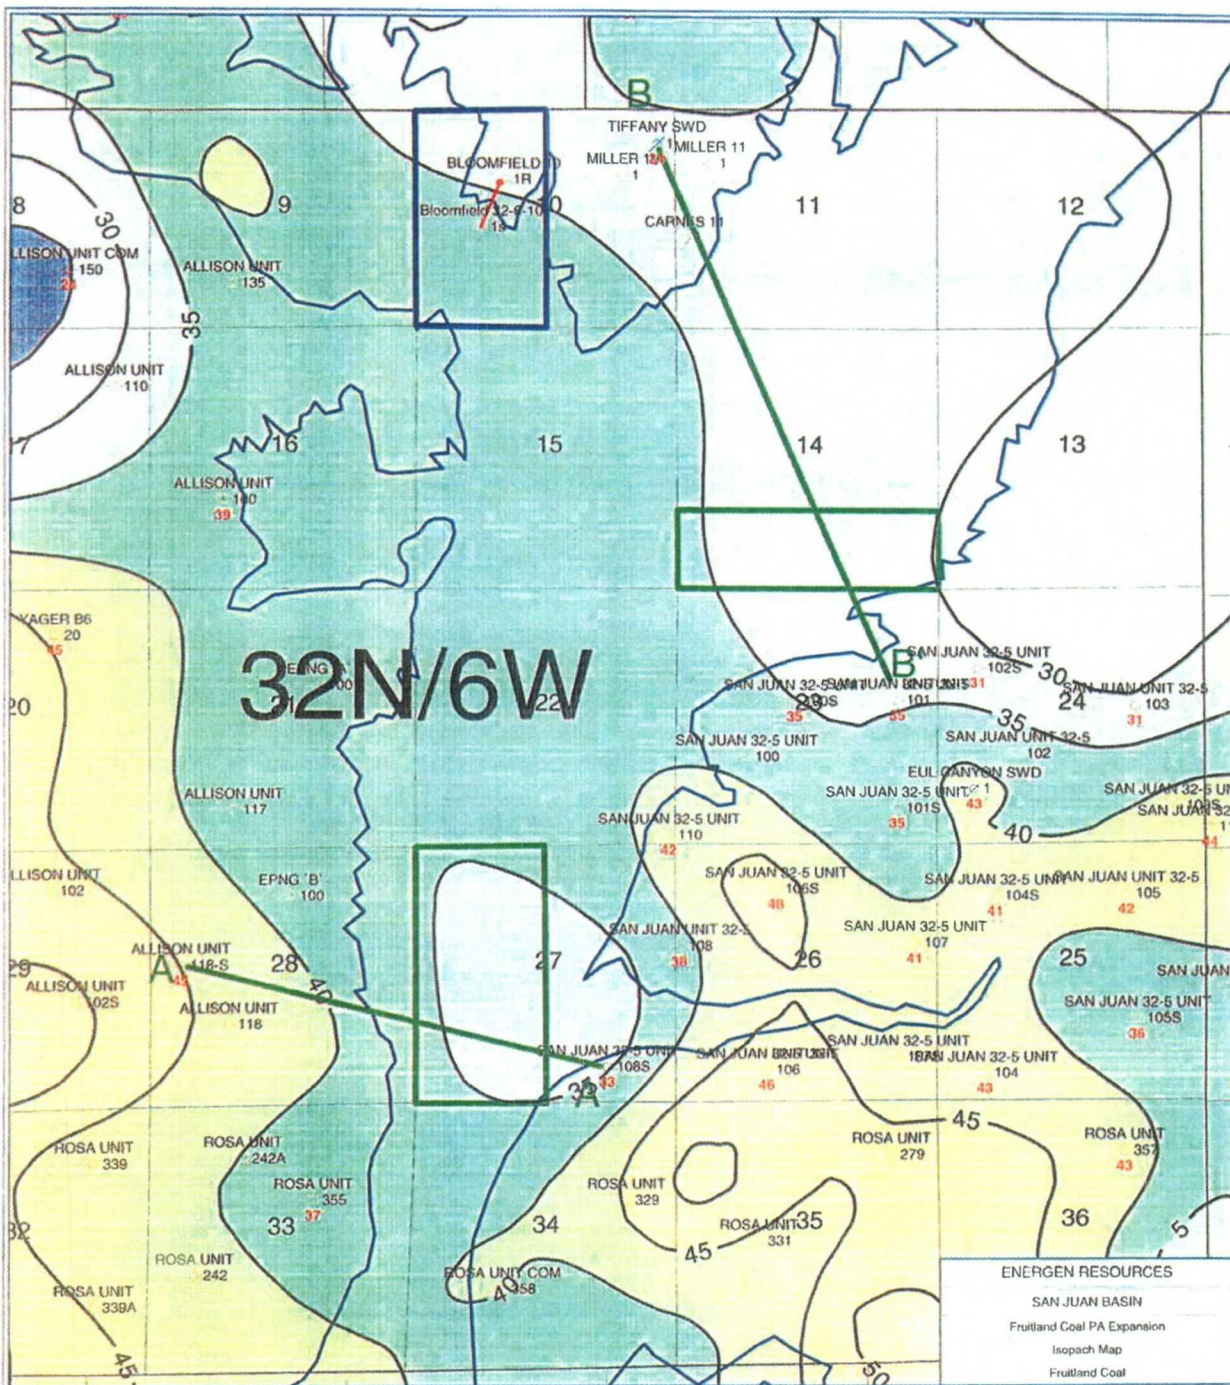

A handwritten signature in black ink, appearing to read "David M. Poage", with a stylized, cursive script.

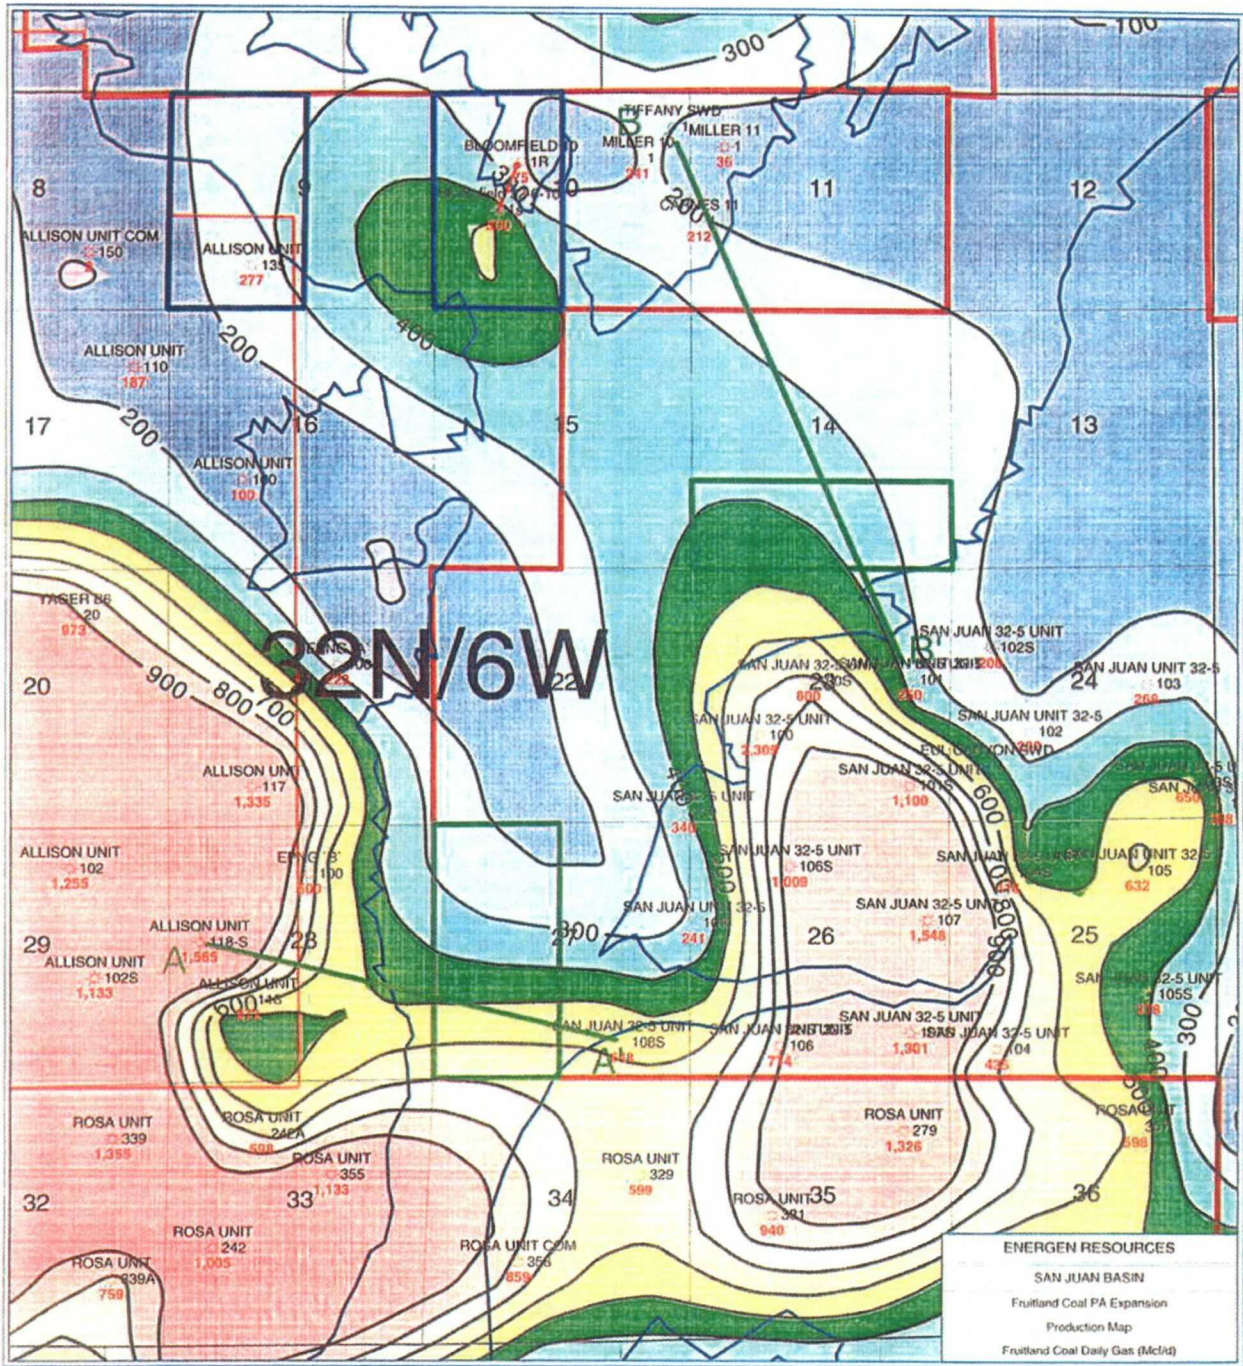

David M. Poage
District Landman

San Juan 32-5 Unit
Fruitland Coal PA Expansion by Geologic Inference
3/2/2006

Summary

Two drill blocks need to be included in the PA prior to drilling the wells in the west half of sect. 27 and the south half sect. 14, T32N-R6W. This will provide a 10' internal setback, as opposed to the 660' if they are not in the PA. This is necessary to get the wells drilled, since these well locations are under Navajo Lake and have to be drilled directionally. The distance to these locations is near the limits of our drilling rigs and the extra 650' would potentially make the drilling impossible under current conditions.

Geology

The Fruitland Coal is continuous and commercially productive in the 32-5 Unit, in the areas to the north and west of the unit, and in the intervening area where these drill blocks are located.

There are two main coal packages present in this area, as shown on the two attached cross sections. Total coal thickness ranges from 35'-45' in the area, and the main coals are continuous. Regional structural dip is down-dip to the north, and there are no known faults in the area, as shown on the attached structure map. Commercial production is present in the 32-5 Unit and to the north and west, as shown on the attached daily production map.

It is not uncommon to find production variations in the Fruitland Coal. This is attributable to different completion methods and different operational conditions (e.g., the presence or absence of pumps and/or compression). However, this entire area has been proven to commercially productive, and there is no doubt about the expected commerciality of the proposed PA expansion drill blocks.
