

Koch Exploration Company, LLC

Infill Drilling Results

- Actual Results from KEC operated wells in T31N-R9W & T31N-R8W depicted on following graph
 - This graph depicts the performance of 31 parent wells from inception
 - Also shown are the results of 24 infill wells beginning December, 2004
- A second graph showing more detail of the same data since January, 2002 is also shown
- Conclusions: no detrimental interference to parent wells performance and overall infill program results have been economically beneficial
- KEC's lack of detrimental interference to parent wells is consistent with Fruitland infill drilling in Colorado
