

APPLICATION FOR AUTHORIZATION TO INJECT

I. PURPOSE: Secondary Recovery Pressure Maintenance Disposal Storage
Application qualifies for administrative approval? Yes No

II. OPERATOR: Armstrong Energy Corporation

ADDRESS: P.O. Box 1973, Roswell, NM 88202-1973

CONTACT PARTY: Bruce A. Stubbs

PHONE: 575-625-2222

III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.
Additional sheets may be attached if necessary.

IV. Is this an expansion of an existing project? Yes No
If yes, give the Division order number authorizing the project: _____

V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.

VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.

VII. Attach data on the proposed operation, including:

1. Proposed average and maximum daily rate and volume of fluids to be injected;
2. Whether the system is open or closed;
3. Proposed average and maximum injection pressure;
4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).

*VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.

IX. Describe the proposed stimulation program, if any.

*X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).

*XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.

XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.

XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.

XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

NAME: Bruce A. Stubbs TITLE: Vice President - Operations

SIGNATURE: B. Stubbs DATE: May 11, 2009

E-MAIL ADDRESS: bastubbs@armstrongenergycorp.com

* If the information required under Sections VI, VIII, X, and XI above has been previously submitted, please show the date and circumstances of the earlier submittal: _____

BEFORE THE OIL CONSERVATION DIVISION
Santa Fe, New Mexico
Case No. 14341 & 14342 (Consolidated) Exhibit No. 9
Submitted by:
ARMSTRONG ENERGY CORPORATION
Hearing Date: July 23, 2009

DISTRIBUTION: Original and one copy to Santa Fe with one copy to the appropriate District

III. WELL DATA

A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No.; Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

VII. Operations

1. Average rate: 100 BWPD Maximum rate: 200 BWPD
Volume: 250,000 BW

2. Closed system

3. Average Pressure: 100 PSI Maximum Pressure: 300 PSI

4. Injection water will be from San Andres wells in the area.

	J.W. State #1	Eskimo State #2
Res.	.060 @ 59°	.065 @ 68°
S.G.	1.178	1.099
pH	5.8	6.67
Ca	5,900	2,560
Mg	9,600	1,890
Cl	159,000	85,205
SO ₄	2,200	Heavy
HCO ₃	144	457
Fe	20	0
Oil Grav.	37.0°	33.4°

Waters are compatible, there is a slight tendency toward calcium carbonate scale that can be controlled with scale inhibitors.

5. N.A.

VIII. Geological Data

Lithological Detail- Sandstone

Geological Name- Queen

Thickness- 16 ft.

Depth- 1575-1590'

Drinking Water- Quaternary, above the Rustler at +/- 140', closest water well is in section 3-T15S-R29E, 5 miles N-NE.

Underlying Zones- None

IX. Stimulation Program

Breakdown perforations with 1500 gals. 15% NEFE acid. Fracture stimulate with 20,000 gals. + 20,000 pounds of sand.

X. Logging

After drilling, logs will be submitted with the completion report.

XI. Fresh Water Analysis – N.A., no water wells within one mile of the Round Tank Federal #1, 30A-T15S-R29E.

XII. Affirmative Statement

Re: Round Tank Federal #1

We have examined the available geological and engineering data and find no evidence of open faults or any other hydraulic connection between the injection zone and any underground source of drinking water.

Armstrong Energy Corporation

Date: 5/11/09

Bruce A. Stubbs, Vice President – Operations

XIII. Proof of Notice

Chaves County, New Mexico

Drilling Program

1. The Estimated tops of geological markers are as follows:

Surface Formation: Permian – Quaternary

Quaternary	Surface
Rustler	140'
Yates	770'
Queen	1500'

2. The estimated depth at which anticipated water, oil or gas formations are expected to be encountered:

Water	140'
Oil	1500'

No other formations are expected to give up oil, gas or fresh water in measurable quantities. Any potential surface fresh water sands will be protected by setting 8 5/8" casing at 150' and circulating cement back to surface. The salt section will be protected by setting 5 1/2" casing to 1600' and circulating cement back to surface. Any shallower zones above TD, which contain commercial quantities of oil and/or gas, will have cement circulated across them by cementing 5 1/2" production casing with sufficient cement to circulate back to surface.

3. Proposed Casing and Cementing Program:

A. Casing Program:

Hole Size	Casing Size	Wt./Ft.	Grade	Coupling	Interval	Cond.
11"	8 5/8"	24 #/ft.	J-55	ST&C	0-150'	New
7 7/8"	5 1/2"	15.5 #/ft.	J-55	LT&C	0-1600'	Used

Minimum casing design factors: Collapse 1.125, Burst 1.0, Tensile Strength 1.8

B. Cementing Program:

String	Sacks	Type	Weight	Yield	T.O.C.
Surface	105	Class "C" w/ 2% CaCl ₂	14.8 PPG	1.32 ft ³	Circ.
Production	120	EconoCem-C	11.9 PPG	2.46 ft ³	Circ.
	100	Class "C" w/.5% LAP-1, .5% CFR-3, 3.0 #/sx. Salt,	14.8 PPG	1.38 ft ³	1100'

3 #/sx. Gilsonite,
.25 #/sx. D-Air

4. Mud Program and Auxiliary Equipment: The well will be drilled to TD with air. The applicable depths and properties of this system are as follows:

<u>Interval</u>	<u>Type</u>	<u>Weight</u>	<u>Viscosity</u>	<u>Fluid loss</u>
0-150'	Air & Mist			N.C.
150-1600'	Air & Mist			N.C.

5. Testing, logging and coring programs:

DST's: No DST's are planned.

Mud Logging: No mudlogger will be used.

Electric Logging: A cased hole GR-Neutron log will be run from surface to T.D.

Coring: No coring is anticipated at this time.

Water Sample Mix

Water Sample 1: Ions & Dissolved Gases (mg/L)

Ca ⁺⁺	5900	Mg ⁺⁺	9600	Na ⁺	0	Ba ⁺⁺	0	Fe ⁺⁺	20	Sr ⁺⁺	0
CO ₃ =	0	HCO ₃ ⁻	144	SO ₄ =	2200	Cl ⁻	159000	OH ⁻	0		
H ₂ S	0	O ₂	0	CO ₂	0						
pH	5.8	Temperature (F)	75	Volume 1 (L)	3						Clear

Water Sample 2: Ions & Dissolved Gases (mg/L)

Ca ⁺⁺	2650	Mg ⁺⁺	1890	Na ⁺	0	Ba ⁺⁺	0	Fe ⁺⁺	0	Sr ⁺⁺	0
CO ₃ =	0	HCO ₃ ⁻	457	SO ₄ =	2000	Cl ⁻	85205	OH ⁻	0		
H ₂ S	0	O ₂	0	CO ₂	0						
pH	6.67	Temperature (F)	75	Volume 2 (L)	2						Clear

Instructions:

There are two types of mixing available:

Mix by Ratio: Insert Temperatures and Ratios for each sample and the Total Volume.

Mix by Volume: Insert Temperatures and Volumes for each sample.

Then click Mix.

Mix Water by Ratio*

*You must enter a total volume to use this method.

Mix Water By Volume

 Total Volume (L)

This will give you a mixed sample, which you can then use to calculate scaling tendencies by clicking the Calculate Scale button. You will be taken to the Calculate Scale page and can choose the method you want.
