

MICHAEL

STONY
D. S. NUTTER
CHIEF ENGINEER

To, Bill Brown

Here are the alternatives of
the P&H wells within 1/2
mile of the injection wells
in B&B Rights proposed.
Saladur Unit water flood.
The Recommendation comments are
mine, taken from the well files.
Please look these over and let
me know if you think any of
these wells should be re-entered
before drilling of waterflood begins.
Many of the wells in this area
have been abandoned, and plugging
program has been a lot to be
desired, please see sheet - (30)

2-8-77 Dan.

I agree that the casing, cementing and
plugging programs on these wells have
a lot to be desired.
However, apparently there is no point
water in the area and he will be the
only operator, therefore any problems
that might arise as a result of the
injection would be his alone.
Maybe the order could be conditioned
to require the immediate re-entry
re-plugging if any well that a leak
shows up on, or the project be shut
down immediately.

Bill

talking of about plugging
the area. I'm not too
sure its very important,
However, if there's no
good water in the area
I'm worry about.

Anyway, pls. let
me know what you think
of these plugged wells.
Thank you.
