RE: Targa Midstream Services
C-108 Application to inject acid gas
Case Number 14575

Commission:

As offset landowners to the above listed application, we are deeply concerned that our property, minerals and health may be affected.

As offset landowners in the area of review, we have several concerns:

- 1) If this is such an important project, why is Targa proposing to use an old abandon SWD well instead of drilling a well that is designed for this purpose.
- 2) The proposed well is located in or near a water flow area (OCD-5003). What happens when one of these flows breaks into the Targa disposal zones?
- 3) All of the H₂S and acid gas will have to be piped to the disposal well. This piping will have to come from the North plant and Middle plant belonging to Targa. With the history of many pipeline "leaks" and eruptions from Targa/Dynagy/Texaco lines, what safeguards do we have that an accident won't occur?
- 4) If the disposal well has to be shut in for reason, will venting occur, if so will the acid gas /H₂S be vented to the atmosphere and will this acid affect the ground surface by sterilizing the soil, killing the grass and cattle.
- 5) Will this affect our minerals by not allowing companies to drill wells in the San Andres or even the safe to crews working on wells in the area?
- 6) Will the Targa operations have more odor by increasing the H₂S and acid gas than we already have?

We hope and pray that you take our concerns into considerations and we appreciate your time in this important matter.

Sincerely,

Minnie Hedgeth
