**Case No. 12857 (Re-opened)**

**APPLICATION**

~~ENERGEN RESOURCES CORPORATION~~ by its undersigned attorneys, Montgomery and Andrews, P.A., (~~J. Scott Hall~~) hereby makes application pursuant to the provisions of Order No. R-11848, and requests the Division re-open Case No. 12857 in order to present the results and recommendations from the ~~25-well-pilot-project-study~~ conducted by Energen, Burlington Resources and BP in portions of the Pictured Cliffs formation in San Juan, Sandoval and Rio Arriba Counties, New Mexico. In support of this re-opened Application, Energen states:

1. On October 2, 2002, the Division entered Order No. R-11848 authorizing Burlington Resources Oil and Gas Company L.P., BP-Amoco and Energen Resources Corporation to conduct a 30-well infill pilot study program in the Pictured Cliffs formation in existing spacing units located within portions of the following pools in San Juan, Sandoval and Rio Arriba counties:

Aztec-Pictured Cliffs Pool (71280)  
Ballard-Pictured Cliffs Pool (71439)  
Blanco-Pictured Cliffs Pool (72359)  
South Blanco-Pictured Cliffs Pool (72439)  
Fulcher Kutz-Pictured Cliffs Pool (77200)  
Gavilan-Pictured Cliffs Pool (77360)  
West Kutz-Pictured Cliffs Pool (79680)  
Tapacito-Pictured Cliffs Pool (85920)

2. The Division's acreage dedication requirements for these pools specify that Pictured Cliffs formation reserves be developed on 160-acre units. However, neither the statewide rules nor the specific pool rules applicable to these pools permitted infill development.

3. At the time of the initial approval of the pilot project, the Division noted that the volumetric ~~analysis of then available data suggested that increasing well density to two wells per 160-acre spacing unit would possibly recover additional reserves and that the current one well per 160-acre unit density rule may result in a low percentage of the gas in place being produced.~~

However, the Division further found that based on studies of then-current geologic and reservoir engineering data, a pilot infill development program was needed to study the relationship between well densities and ultimate gas recoveries.

4. The pilot program proposed by the original applicants was intended to:

- (a) enable the applicants to gather layer pressure measurements;
- (b) accumulate comprehensive technical data for study and reservoir simulation;
- (c) accurately determine formation ~~water saturations~~; and
- (d) make an estimation of original gas-in-place and remaining reserves.

5. To implement the study, the applicants proposed to drill or recomplete thirty pilot wells based on the following criteria:

- (a) they must each be located 900 feet or more from an existing Pictured Cliffs well;
- (b) the existing Pictured Cliffs gas wells must be in good producing condition
- (c) if any Basin-Fruitland Coal (Gas) Well exists within a subject 160-acre unit, it must not have high production rates or cumulative recoveries;
- (d) offset Pictured cliffs wells' cumulative recoveries should be between 0.7 and 1.5 BCF;
- (e) they represent a variety of Pictured Cliffs pools; and
- (f) they include wells located in both ~~high and low permeability areas~~

Criteria used for selecting the wellbores to be recompleted were:

- (a) current well production be less than 50 MCFD;
- (b) casing and cement be in good mechanical condition; and
- (c) production from the current producing formation can be commingled with production from the Pictured Cliffs formation.

6. Of the 30 infill wells initially approved, 5 were not recompleted due to well bore integrity issues. The applicants subsequently drilled or recompleted 25 of the pilot wells in the areas operated by each of them respectively on the following spacing units:

- (1) The standard 160.50-acre gas spacing unit in the South Blanco-Pictured Cliffs Pool (72439) comprising Lots 1 and 2 and the S/2 NE/4 (NE/4 equivalent) of Section 1, Township 26 North, Range 8 West, NMPM, San Juan County, New Mexico, dedicated to Burlington's Luthy "A" Well No. 1 (API No. 30-045-06040), located at an unorthodox location 1980 feet from the North line and 510 feet from the East line (Unit H) of Section 1. and the Luthy "A" Well No. 4 (API No. 30-045-26613), located at an unorthodox infill gas well location 2250 feet from the North line and 1610 feet from the East line (Unit G) of Section 1.
