### STATEMENT OF CASE

BTA Oil Producers LLC (BTA) is the operator of record for the Pardue C 8808 JVP #001, a salt water injection well located approximately 110 feet to the west of the Pecos River. Overflow pipelines carry produced water from the produced water tank battery at the well site to an unpermitted, unlined pit. For over two years the Oil Conservation Division (OCD) has worked with BTA and its predecessor to require the operator to conduct a proper investigation of the site and perform appropriate corrective action. According to a report submitted on behalf of BTA by its consultant, groundwater “has likely been impacted by the facility operations at the surface.” The report indicates that the water zone beneath the site “is expressed from the hillside and ultimately leaks into the flowing Pecos River.” The parties were not able to agree to an appropriate delineation and abatement/remediation plan.

In its application, the OCD alleged that BTA’s use of this unpermitted pit to dispose of produced water is in violation of the terms of its injection permit (Order No. R-9147-C); the rules on injection projects (19.15.26.10.B NMAC); the rules governing the disposition of produced water (19.15.34 NMAC); the pit rule (19.15.17 NMAC); and the rule governing releases (19.15.29 NMAC). The OCD sought an order requiring BTA to remove the pit and return the site to its original condition.

At the first hearing in this matter, the OCD and BTA submitted a stipulated order and settlement agreement to the examiner in which BTA acknowledged the violations and the parties agreed on a path forward to delineate and remediate contamination at the site. Division Director Mark Fesmire signed the order on February 5, 2010. The order was entered in the case as Order

No. R-13218. The order required BTA to submit a delineation plan to the OCD's Environmental Bureau by February 25, 2010. The order continued the case until the March 4, 2010 docket. The order provided that the issue to be determined at the March 4 hearing would be the adequacy of the delineation plan and the next step to be taken in the delineation/remediation process. If the parties were able to enter into an amendment to the stipulated order specifying the next step(s), they could request that the case be continued until a future docket.

BTA timely submitted a delineation plan, which the Environmental Bureau approved with conditions. At the March 4 hearing, the parties hope to provide the examiner with a proposed amendment to the stipulated order specifying the next step(s) in the delineation/remediation process. If the parties are not able to agree, the OCD will request that the examiner enter an order setting out the next steps in the delineation/remediation process.

#### **OCD'S PROPOSED EVIDENCE**

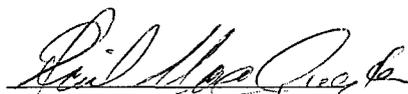

WITNESS: Glenn von Gonten, OCD, Acting Bureau Chief for the Environmental Bureau  
ESTIMATED TIME: 1 hour.  
The OCD intends to offer Mr. VonGonten as an expert witness to testify on the subjects of delineation and remediation/abatement, hydrology and geology.

Witness: Daniel Sanchez, OCD Compliance and Enforcement Manager  
ESTIMATED TIME: 10 minutes

#### **PROCEDURAL MATTERS**

At the close of the hearing, the OCD will request that the examiner continue the case until a hearing date at a specified date in the future, and require the parties to appear at that hearing to report on their progress. The OCD may request an additional order and additional update hearings to move the process forward.

Respectfully submitted
