

BEFORE THE NEW MEXICO OIL CONSERVATION DIVISION

APPLICATION OF CHARLES B.
GILLESPIE, JR. FOR AUTHORITY TO
INSTITUTE A PRESSURE MAINTENANCE
PROJECT AND FOR QUALIFICATION
FOR THE RECOVERED OIL TAX RATE,
LEA COUNTY, NEW MEXICO

No. 11194

APPLICATION

Charles B. Gillespie, Jr. hereby applies for an order approving the institution of a natural gas injection project for pressure maintenance and for secondary recovery of hydrocarbons in the proposed West Lovington Strawn Unit located in Lea County, New Mexico, and to qualify the project for the recovered oil tax rate, and in support thereof, states:

1. Charles B. Gillespie, Jr., in a related application, has requested Division approval of statutory unitization and of the Unit Agreement and Unit Operating Agreement for the proposed West Lovington Strawn Unit in Lea County, New Mexico. The Unit Area, Unitized Formation, Unit Agreement, and Unit Operating Agreement are described in said application.

2. Charles B. Gillespie, Jr., the operator of the Unit, proposes to institute a natural gas injection project for pressure maintenance and secondary recovery of oil and gas from the Unitized Formation within the Unit Area.

3. By converting a presently producing well into an injection well, Charles B. Gillespie, Jr. proposes to inject natural gas into the Strawn Formation in the West Lovington Strawn Unit. Attached hereto as Exhibit 1 is a plat showing the location of all wells located within the Unit Area which are

proposed to be used as producing or injection wells.

4. The gas to be used for injection for the project is natural gas. Initially, 3 MMCFG per day will be injected, with an anticipated maximum injected volume of 6 MMCFG per day.

5. Approval of the pressure maintenance project will substantially increase recoverable reserves to be produced within the useful life of the new production and injection facilities which will be installed, thereby preventing waste and protecting correlative rights.

7. The Form C-108 relating to the proposed pressure maintenance project is attached hereto as Exhibit 2.

8. Applicant further requests qualification of the pressure maintenance project for the recovered oil tax rate pursuant to the Enhanced Oil Recovery Act, L. 1992, Ch. 38, and Division Order No. R-9708.

9. The initial project area, containing 1457.05 acres, is described on Exhibit 3, and a plat of the project area is attached as Exhibit 4. The leases, lessors, lessees, and other interest owners within the Unit Area are identified on Exhibit 5 attached hereto.

10. Project data includes:

- (a) Number of initial producing wells: 8
- (b) Number of initial injection wells: 1
- (c) Capital cost of additional facilities: \$50,000
- (d) Total project cost: \$1,500,000

(e) Estimated net value of secondary production recovered from the project: \$35,000,000¹

(f) Anticipated injection volumes: 3-6 MMCFGPD

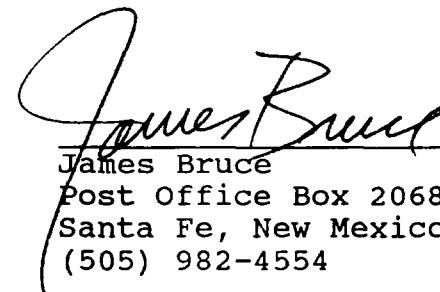

A listing of initial producing and injection wells in the Unit is attached hereto as Exhibit 6.

11. The production history of the project area is exhibited on the graph attached hereto as Exhibit 7. The projected oil production from the project area is exhibited on the graph attached hereto as Exhibit 8.

WHEREFORE, Charles B. Gillespie, Jr. requests that this application be set for hearing before the Division, and that after hearing the Division enter its order approving the pressure maintenance project and qualifying this project as an Enhanced Oil Recovery Project.

Respectfully submitted,

HINKLE, COX, EATON, COFFIELD
& HENSLEY

APPLICATION FOR AUTHORIZATION TO INJECT

Case 11194

- I. Purpose: Secondary Recovery Pressure Maintenance Disposal Storage
Application qualifies for administrative approval? Yes no

II. Operator: Charles B. Gillespie, Jr.Address: P. O. Box 8 Midland, Texas 79702Contact party: Kevin Widner Phone: (915) 683-1765

III. Well data: Complete the data required on the reverse side of this form for each well proposed for injection. Additional sheets may be attached if necessary.

IV. Is this an expansion of an existing project? yes no
If yes, give the Division order number authorizing the project _____.

V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.

* VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.

VII. Attach data on the proposed operation, including:

1. Proposed average and maximum daily rate and volume of fluids to be injected;
2. Whether the system is open or closed;
3. Proposed average and maximum injection pressure;
4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and
5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).

*VIII Attach appropriate geological and geophysical data including appropriate lithologic detail, geological name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such source known to be immediately underlying the injection interval.

IX. Describe the proposed stimulation program, if any.

* X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division they need not be resubmitted.)

* XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.

XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground source of drinking water.

XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.

XIV. Certification

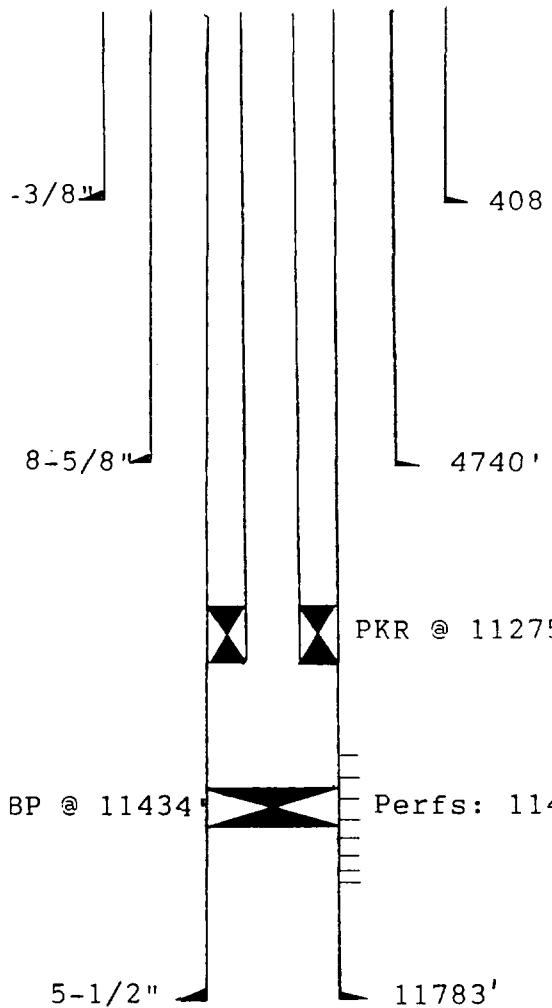

I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

Name: Kevin Widner Title Production ManagerSignature: Kevin Widner Date: _____

* If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be duplicated and resubmitted. Please show the date and circumstance of the earlier submittal.

Gas Injection Well

Injection Gas Analysis

ATTACHMENT C-108 VIII

GEOLOGICAL DATA

Pressure maintenance is proposed for the Lovington Strawn, West Pool by injecting natural gas into the top of the Strawn reservoir in an interval from 11,424 feet to approximately 11,444 feet in the Charles B. Gillespie, Jr. Speight Fee No. 1 well located 660 feet from the North line and 2310 feet from the West line of Section 1, Township 16 South, Range 35 East, N.M.P.M., Lea County, New Mexico.

The Strawn formation in this well, as well as throughout the general area, is mostly a carbonate limestone interval underlying the Canyon shale section, however, there is a thin lower Strawn clastic section immediately overlying the Atoka formation, all of which are Pennsylvanian in age. The top of the Strawn formation in the proposed injection well occurs at 11,420 feet, while the base of the formation is found at 11,744 feet, for an overall thickness of 324 feet. The proposed injection well, like all the wells in the Lovington Strawn, West Pool, is producing oil and gas from a phylloid algal mound of Pennsylvanian (Strawn) age where porosity and permeability was greatly enhanced by fresh water dissolution of bioclastic material during periods of subaerial exposure.

Fresh water may be found in the Quaternary formation above the redbeds in the vicinity of the proposed injection well. This ground water is usually found at a depth between 100 feet and 200 feet, and all oil and gas wells drilled in the area have surface casing set and cemented to a depth of at least 375 feet.

There are no other known fresh water sands overlying the proposed injection zone and there are no known fresh water sands underlying the injection zone anywhere in the vicinity.
