

SJ 28-7 Unit Dakota Pilot

(Division Order R-11139)

- Summary of Core Results :
 - Natural fracturing was observed
 - Perm @400 psi averaged .007 md (geometric mean)
 - Porosities widely varied: 4-10%
 - Water saturation widely varied with average of 35-50%
 - Overall low reservoir quality present: low permeability, reservoir heterogeneity, varying but commonly low amounts of recognizable fracturing, etc.
