Re: Stephens & Johnson Operating Co.
Inactive Wells
Artesia District

Dear Mr. Gum:

We are in receipt of your letter dated September 8, 2000 concerning the future plans of certain inactive wells operated by Stephens & Johnson Operating Co.

A tabulation has been attached indicating current plans for the inactive wells which were included in your letter of September 8, 2000. As indicated, two of the wells will be returned to active status while a TA'd status will be requested for the remaining two wells on the East Millman Pool Unit located in Eddy County, New Mexico.

The East Millman Pool Unit is an active waterflood project with an infill drilling program currently underway. The infill drilling program will continue for the next three years after which it is anticipated that the East Millman Pool Unit wells No. 4-4 and 6-5 will be utilized as water injection wells. As indicated, the required mechanical integrity tests are planned to be preformed during the week of October 2, 2000. As required, the Oil Conservation Division will be notified prior to these mechanical integrity tests after which the necessary Oil Conservation forms will be submitted.
