STATE OF

EXHIBIT 1172

PAN AMERICAN PETROLEUM CORPORATION  
APPLICATION FOR PERMISSION TO TRIPLE  
COMPLETE ITS STATE "CK" WELL NO. 2,  
IN THE DRINKARD (OIL) BLINEBRY (OIL) AND  
PADDOCK (OIL) POOLS, LEA COUNTY, NEW MEXICO

EXAMINER HEARING CASE NO. 2540  
APRIL 25, 1962

DISCUSSION

BEFORE EXAMINER UTZ	
OIL CONSERVATION COMMISSION	
Appl. No. _____	EXHIBIT NO. <u>1</u>
CASE NO. _____	<u>2540</u>

Pan American Petroleum Corporation respectfully requests that the New Mexico Oil Conservation Commission grant permission to triple complete its State "CK" No. 2 well in the Drinkard (Oil)-Blinebry (Oil)-Paddock (Oil) pools of Lea County, New Mexico.

State "CK" well No. 2 is located 330 feet from the south and east lines of the NE/4 of the SW/4 of Section 19, T-21-S, R-37-E which location is approximately three miles northwest of Eunice, New Mexico.

This well is in a multi-pay area with a number of multiple completions already in existence. Its south offset, Pan American State "CK" No. 1 is a dual Paddock (Oil)-Drinkard (Oil) well. A southeast diagonal offset, J. W. Perry Hardy Federal No. 5, is a dual Blinebry (Oil)-Paddock (Oil) well; one location east of this well is the J. W. Perry Hardy Federal No. 2, a dual Drinkard (Oil)-Blinebry (Oil) well. The Texaco Henderson No. 6 located one-half mile south is reported to be a triple Drinkard (Oil)-Blinebry (Gas)-Paddock (Oil) well. Amerada Petroleum Corporation has sought in Case No. 2535 permission to quadruple complete its Warlick "A" No. 1, located one-half mile east of the subject well, in the Eumont (Gas)-Blinebry (Oil)-Penrose-Skelly (Oil) and Drinkard (Oil) pools.

Attachment I is a plat showing the locations of State "CK" No. 2 and other wells in its vicinity.

Attachment II is a diagrammatic sketch showing the mechanical aspects of this triple completion. The packers and related equipment were manufactured by a reputable supply firm and will prevent the commingling of fluids from the three horizons in the well bore. It is believed that this mechanical installation is well suited to safely and efficiently produce oil from these three reservoirs through separate tubing strings. Packer leakage tests are now being run and test data will be supplied the Commission upon completion.

This 40 acre proration unit is adjacent to the E/2 of Section 19, T-21-S, R-37-E which has been placed in the Drinkard pool by Nomenclature orders ending with No. R-2119, dated December 1, 1961. It is adjacent to S/2 SE/4 Section 19 which has been placed in the Blinebry pool by Nomenclature orders ending with No. R-2119 dated December 1, 1961. It is also adjacent to the SE/4 of Section 19 which has been placed in the Paddock pool by Nomenclature orders ending with No. R-2172 dated February 1, 1962.

Attachments III A, B, and C, are copies of waivers of objection from the offset operations Amerada, Gulf, Texaco, and Peck Oil (J. W. Perry).

Attachment IV is a Gamma Ray Neutron log of the subject well with the perforated intervals marked in red.

Attachment V presents, for convenience, a copy of Pan American application for multiple completion of this <sup>well</sup> which was submitted by Pan American's letter of March 22, 1962, File: CDF-6085-986.510.1.
