

October 29, 1970

Mr. H. L. Brown, Jr.
309 Midland Tower Building
Midland, Texas

Dear Sir:

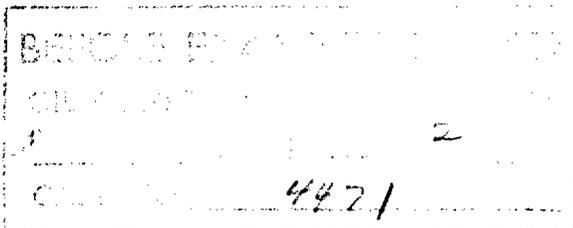

In reply to Mr. H. H. Gaston's inquiry concerning a well location in Section 19, Township 19 South, Range 30 East, Southwest Potash Corporation would preselection of the southernmost location, specifically, 660' from the South line and 1,980' from the East line.

Our reasons are twofold: (a) This location would be furthest from our present mine openings and projections, and (b) this location would be furthest from our Potash Test Hole #41 drilled in Section 19 and mineralized to some extent.

Very truly yours,

R. E. Kirby
Chief Mine Engineer
