Re: Proposed Stock Unit  
21S-33E (Our L-10485)  
LEA COUNTY, NEW MEXICO

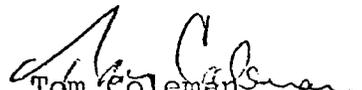

Gentlemen:

We have reviewed your letter of October 18, 1973, in which you proposed the formation of a nine-section unit for the drilling of a 14,500' Morrow test. This is to advise that Midwest cannot recommend participating in this unit, however we will be agreeable to a farmout of our 240-acre tract. In farming out to the unit Midwest would retain a 1/16 of 8/8 overriding royalty interest with the option to convert the override to a 50% working interest after payout of the test well. Both the override and the working interest would, of course, be proportionately reduced to Midwest's net interest in the unit. On subsequent wells Midwest would then take part to the extent of one-half of this interest under the terms of a satisfactory joint operating agreement.

If this farmout offer is acceptable, please let us know and also please advise the manner in which you wish to handle this farmout trade. We would be agreeable to having the terms of our farmout incorporated in the joint operating agreement.

Very truly yours,

MIDWEST OIL CORPORATION
