RE: Application - High Angle/Horizontal
Directional Drilling Pilot Project
Special Operating Rules
Non-Standard Oil Proration Unit
Special Project Oil Allowable

Dear Mr. LeMay,

Petroleum Development Corporation (PEDCO) applies for public hearing on September 9, 1993 to authorize the intentional deviation from the existing vertical hole using the following procedure:

1. Mill a 45+ foot section in the existing 5 1/2" casing.
2. A directional survey will be run to determine the location of the kick off point.
3. Drill a 60+ foot radii 85° to 90° into the San Andres pay zone.
4. Horizontally drill 1000+ feet into the pay zone.
5. Adequate directional surveys will be run in the deviated hole.
6. The horizontal hole will be maintained a distance of 100 feet from any boundary of any lease line.

The horizontal hole will cross the boundary joining the two 40 acre spacing tracts forming an 80 acre spacing unit. PEDCO request a 160 barrels of oil per day allowable be assigned to this 80 acre spacing unit. The horizontal hole may be drilled as close to or cross any boundary of any adjoining 40 acre spacing tract to the 80 acre spacing unit on the same lease. In the event the horizontal hole crosses any boundary of any adjoining 40 acre spacing tract to the 80 acre spacing unit on the same lease, an 120 acre spacing unit may be formed with an allowable of 240 barrels of oil per day. However, the cumulative allowable for any spacing units formed will never be greater than 80 BOPD per 40 acre oil proration unit.

PEDCO
