Gentlemen:

This letter is in response to Exxon's letter of October 19, 1989 and several conversations concerning same. It has just come to Santa Fe's attention through conversations with the OCD District Office that the referenced well will fall under the Field Rules for the Rock Tank Morrow Pool which commands 640 acre spacing. Initially Santa Fe and the OCD District Office felt this location would qualify for 320 acre spacing due to the Dark Canyon Penn Field to the South. However with further research by the OCD, this well is to be placed in the said Rock Tank Field.

Santa Fe has also been forced to move its location due to the topography located around this location. After staking approximately four locations, the only viable location appears to be 1980' FNL & 1980' FWL of this Section 20. Due to this falling approximately 200 feet higher in elevation from our original location, the projected total depth now becomes 11,100'. This should not affect the original AFE costs.

Considering the above, Exxon's request to utilize the E/2 of Section 20 as a Proration Unit and its suggested farmout terms could not be accommodated. Irregardless of the 640 acre spacing, the E/2 Proration Unit is not allowable pursuant to the Federal Regulations, specifically under 43 CFR Section 3105.2-2. The BLM will not approve a Communitization Agreement if it can be independently developed and operated in conformity with an established well spacing program. Since Amoco's lease in the S/2 of Section 20 could have been developed independently on a 320 acre spacing basis, it is our understanding the BLM will not communitize said tract irregardless of OCD approval of same.

Santa Fe will entertain accepting a farmout agreement from Exxon of its interest in the 640 acre Proration Unit, based on delivering a 75% NRI

lease with Exxon reserving an ORRI equal to the difference of 25% and existing lease burdens with Exxon having the option to convert the ORRI to a 25% Back-In APO of the initial well, all proportionately reduced. Santa Fe feels that a one-third (1/3rd) Back-In, as Exxon proposes, is excessive for this exploratory Morrow test. Should Exxon like to reconsider and join this well, Santa Fe will likewise offer the option to Exxon should the change in spacing influence Exxon's initial decision.

In order to proceed with this test, Santa Fe plans to go ahead and re-advertise the Compulsory Pooling for the November 29, 1989 docket. Hopefully a voluntary agreement can be reached and said hearing dismissed.

Should you have any questions concerning this matter, please feel free to give me a call.

Sincerely yours,

Sec. 20, T-23-S, R-25-E
Eddy County, New Mexico
Mutton Prospect

Gentlemen:

Please be advised that the New Mexico OCD has mandated that Santa Fe drill the referenced well under the 640 acre spacing attributable to the Rock Tank Field. Therefore, Santa Fe again proposes this well with all of Section 20 to be dedicated to same. The AFE for the drilling of this well shall remain the same as that forwarded in our letter of September 6, 1989.

After staking approximately four locations, it has been determined that the referenced location is the only viable one due to the topography in the area. Due to this falling approximately 200 feet higher in elevation from our original location, the projected total depth now becomes 11,100'. This should not affect the original AFE costs.

Santa Fe again invites you to join or farmout for the drilling of this well. Should you elect to farmout, Santa Fe would entertain accepting a Farmout Agreement based on delivering a 75% NRI lease with Siete reserving an ORRI equal to the difference of 25% and existing lease burdens with Siete having the option to convert the ORRI to a 25% Back-In APO of the initial well, all proportionately reduced.

If it is your desire to join, it is requested that you execute and return the one copy of the two AFES previously forwarded, to the undersigned.

Due to the change in spacing, the original Force Pooling Hearing will be re-advertised and is planned to be held on the November 29, 1989 Docket.

Gentlemen:

Santa Fe Energy Operating Partners, L.P. hereby proposes the drilling of a 11,100' Morrow test at the referenced location in Eddy County, New Mexico. All of Section 20 is to be dedicated to the Proration Unit.

Santa Fe would invite you to join in this test well, and in this regard has enclosed two AFES itemizing the costs. If it is your desire to join, please so indicate by executing and returning one AFE to the undersigned. A JO/A will be signed and forwarded upon your election to join. Should Amoco desire not to join this test, Santa Fe would request that you farmout your interest in the Proration Unit based on delivering a 75% NRI lease with Amoco reserving an ORRI equal to the difference between 25% and the existing lease burdens with Amoco having the option to convert the ORRI to a 25% Back-In APO of the initial well, all proportionately reduced.

Santa Fe apologizes for the short notice concerning this proposal. As you are aware, Santa Fe had been discussing with Amoco the possibility of an Optional Farmout Agreement on Amoco's lease on the S/2 of Section 20 when it was believed that spacing for this well would be on a 320 acre basis. However, as discussed, it was not until this week that we received clarification from the OCD that this well would be in the 640 acre spacing for the Rock Tank Field.

Santa Fe previously filed a Force Pooling Hearing against Exxon for the N/2 of Section 20, which was to be held on the November 1st Docket. This change in spacing requires us to re-file the application and to proceed with the well. It is planned to enjoin Amoco under the Force Pooling in order to protect the interests for this well. The hearing will now be re-scheduled for the November 29, 1989 docket. It would be our plan however, to work out a voluntary agreement in order that we may dismiss said Hearing.

Gentlemen:

By letter of August 25, 1989, you proposed to drill the captioned well with the N/2 of Section 20 as the dedicated proration unit. By letter of September 26th, we advised that Exxon was not interested in participating in this well. Since your initial letter did not provide terms for a farmout, we did not propose any farmout terms at that time. Subsequent to that time, Exxon has received notification of your intention to force pool Exxon at a November 1st hearing before the New Mexico Oil Conservation Division. In order to resolve our farmout terms before the hearing, Exxon proposes the following terms and alternatives:

1. Exxon requests that Santa Fe consider amending your location in order to utilize the E/2 of Section 20 as the dedicated proration unit. This configuration will protect Santa Fe's acreage in Section 21 by eliminating the possibility of another well being drilled in the SE/4 of Section 20. In return for dedicating the E/2 of Section 20, Exxon will farmout our acreage in the NE/4 of Section 20 to Santa Fe on a produce to earn basis delivering a 75% NRI lease with Exxon reserving an overriding royalty equal to the difference between 25% and existing lease burdens. Exxon shall not reserve any back-in after payout of the initial well.
2. If Santa Fe will not consider our proposal in 1. above, then Exxon will farmout its leasehold in the N/2 of Section 20 on a produce to earn basis delivering a 75% NRI lease with Exxon reserving an overriding royalty interest equal to the difference between 25% and existing lease burdens. This overriding royalty interest shall be convertible to a 1/3 back-in after payout of the initial well.

As stated above, Exxon prefers that Santa Fe realign their proration unit to encompass the E/2 Section 20. If you have any questions concerning these proposals, please contact the undersigned at 688-6758. Your early attention to this matter is appreciated.

Yours Very Truly,

Brockman King

Dear Mr. Tower:

Exxon Company, U.S.A., is in receipt of your letter dated August 25, in which it is requested that Exxon elect to join or farmout the referenced acreage for a 10,900' Morrow test. After careful consideration, Exxon respectfully declines your request in the proposed unit at this time.

We appreciate your request and hope the future will hold some mutually beneficial opportunities.

Yours very truly,
