

EXHIBIT 3

Section C. Downhole Commingling item 1. (a)(5)

The total value of the crude oil will not be reduced by commingling.

Attached are crude oil run statements from the purchaser (Tesoro) showing no real change in quality of crude purchased from the Belcher lease prior to or after commingling of Blinebry, Tubb, and Drinkard zones.

January 1984 thru August 1984 the gravity of commingled Tubb and Drinkard crude from the Belcher Well No. 1 ranged from 36.80° to 40.6° API gravity. During September 1984 the Blinebry was opened and produced as a single zone with oil gravity ranging from 37.1° to 40.0° API gravity. In late December all three zones were commingled within the wellbore with crude oil runs ranging in gravity from 38.8° to 40.3° API gravity during January and February 1985.

Current crude oil gravity from the Belcher 'A' Well No. 1 ranges from 38.8° to 40.3° API gravity. The quality of the crude should not be reduced when all three zones are commingled and should be comparable to the Belcher Well No. 1.
