STATEMENT OF CASE

APPLICANT:

Conoco Inc. seeks approval for a high angle/ horizontal directional drilling pilot project in the Basin Fruitland Coal Gas Pool. The proposed project is the E/2 of Section 20, T29N, R8W, San Juan County, New Mexico.

Conoco proposes to utilize its existing Hughes B #16 Well as an observation well and replace it with the Hughes B-16R Well to be located at a surface location in the NE/4 and to then be drilled vertically to a kickoff point of approximately 2642 feet TVD and then drilled horizontally in a southerly direction within a drilling producing window in the E/2 of Section 20 such that its surface location and producing interval will be no closer than 790 feet to the outer boundaries of the spacing unit.

Section 20 and, with the exception of Section 30, each of the adjoining sections has been fully developed with two wells to the section.

Conoco seeks to drill this high angle well in a north to south direction in order to intersect substantially more of the coal cleats than a vertical well might thereby increasing the opportunity for a more productive well.
