It is intended to recomple the subject well in the Blanco Mesaverde (pool 72319) and downhole commingle the existing **Basin Dakota** (pool 71599) with the Mesaverde. The production will be commingled per Oil Conservation Division Order Number 11363. See attached allocation methodology. Commingling will not reduce the value of the production. The Bureau of Land Management has been notified in writing of this application.

Proposed perforations are: MV - 4300' – 5782'; **DK** - 7672' - 7687' **These perforations are in TVD.**

If the expected allocation changes, then the Operator shall submit a Form C-103 to the OCD Engineering Bureau with the amended allocation and all data used to determine it.

As referenced in Order # R- 11188 interest owners were not re-notified.

No later than ninety (90) days after the fourth year, the Operator shall submit a Form C-103 to the OCD Engineering Bureau that includes the fixed percentage allocation plan and all data used to determine it.

## Production Allocation Method - Subtraction

### Gas Allocation:

Production for the downhole commingle will be allocated using the subtraction method in agreement with local agencies. The base formation is the Dakota and the added formation to be commingled is the Mesaverde. The subtraction method applies an average monthly production forecast to the base formation using historic production. All production from this well exceeding the forecast will be allocated to the new formation.

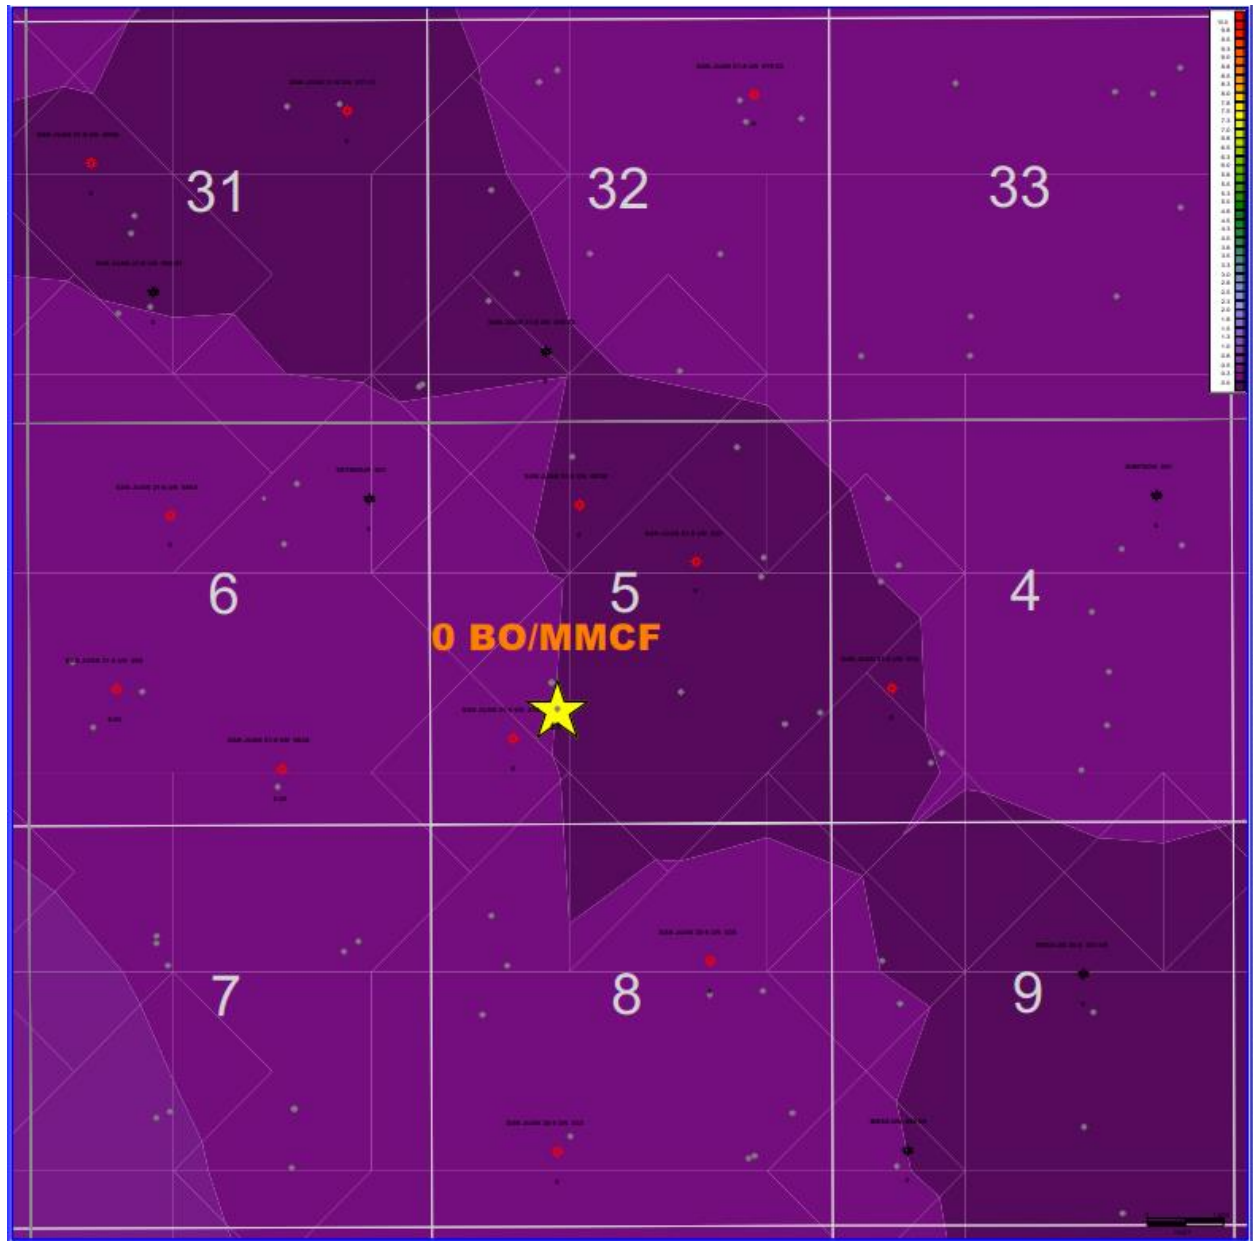

After 3 years production will stabilize. A production average will be gathered during the 4<sup>th</sup> year and will be utilized to create a fixed percentage based allocation.

### Oil Allocation:

Oil production will be allocated based on average formation yields from offset wells and will be a fixed rate for 4 years.

After 4 years oil will be reevaluated and adjust as needed based on average formation yields and new fixed gas allocation.

9- Section Area Map of MV Standalone Oil Yields

9- Section Area Map of DK Standalone Oil Yields

Historically the Dakota formation has not produced any oil therefore all oil will be allocated to the Meaverde zone.
