DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In accordance with approved notice of Intention to Abandon subject well, this work has been completed in the following manner: Bottom of well bore was filled with very heavy mud-laden fluid. 9-5/8" csg. was shot off and 5354' of this was recovered. A 20' cement plug was placed in bottom of 9-5/8 at 4980. Two 20' plugs were placed in open hole at 2700 and 2420, respectively. A 20' cement plug was placed in bottom of 13" csg. at 1084. A 15' cement plug was placed 15' to surface. All intervening space was filled up with heavy mud-laden fluid. A 4" pipe marker extends 5' above the ground level which was cemented in top of the surface csg. The cellar and pits were filled and location graded. Work completed April 3, 1943.

No 13" or 16" csg. was recovered. In as much as these csg. strings were cemented to surface.

In our Notice of Intention to Abandon, we proposed acidizing and testing the San Andres  
I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced. (OVER)
