

OIL CONSERVATION COMMISSION

P. O. BOX 871

SANTA FE, NEW MEXICO

INSPECTION REPORT

June 19, 1952

NEVILLE G. PENROSE, Inc. Re: Tippens No. 1
NWNW Sec. 35-12N-34E
Quay County

Total depth at this well today has reached 5885' and drilling is progressing satisfactorily. Formation encountered here is a re-worked granite or granite wash material. This is now being drilled with 7 7/8" WTR rock bits, although the new Hughes R-1 bit has been used up the hole to good advantage.

There is a great deal of red shale cavings in the cuttings. Ditch samples of the interval 5615-5880' were delivered to me for transfer to the state sample library.
