INSPECTION REPORT

May 15 1952

BESS OIL & GAS CO.

Re: Bess-Rock Bros. #1
N²SW Sec. 10-16N-35E
Quay County

I visited this well today and secured the following. Drilling by underreaming of the 7" casing in the hole is being done. The operators have decided not to run the 5" casing, as previously planned as the water in the hole is not a great hindrance. They will deepen until a good seating formation is encountered for the 7" casing. Hence, they will reduce the size of the hole.

Total depth at the end of the working day was 2485' in very fine grained, hard and compact white sandstone.
