re: A-22-45-6E

Ernie:

There is a large pad here;
big enough for both wells.
Only one well could be
found. I don't know which
of these I found - no
identification.

However, the well that
is there is obviously
a hazard. (Radioactive)

USGS has been advised
at least 4 times - different
people, including Beekman,
Knauf, Schmidt, and Lara.

I doubt that anyone (except me)
has gone for inspection.
