

7. Waste Disposal Methods

- a. All garbage, trash and drilling debris will be burned on location in a four (4) foot deep burn hole. No trash or debris will be buried in the reserve pit.
- b. Human waste will be disposed of in compliance with current laws and regulations.

8. Ancillary Facilities

None required.

9. Well Site Layout

- a. EXHIBIT "C" is the drill pad layout illustrating the location of drilling equipment, trailers, pits, etc.
- b. EXHIBIT "E" is Drillsite Profiles illustrating the cross-section of the drill pad and entrance road. There will be constructed around the West side of pad an interception ditch so that any runoff water will be diverted around pad.
- c. The reserve pit will be lined with a 4 mil. plastic liner so as to prevent loss of water.
- d. During construction, rocks and soil removed from the pad and pit areas will be used in road and location construction.

10. Plans for Surface Restoration

- a. After completion of drilling and/or completion operations, all equipment and other materials not needed for operations will be removed. The area will then be cleaned and leveled back to its original contour. Vegetation which existed prior to construction of pad will be re-seeded.
- b. If the reserve pit contains any fluids it will be fenced until dry. Drill cuttings will be placed in reserve pit, exposed edges of the plastic liner will be folded over same and then rock and dirt, removed during site construction, will be used to cover and restore pit to its original level.
- c. The drill pad will be used for testing equipment if the well is a success. If the well is a dry hole, the location will be cleaned and then seeded with original vegetation. The cellar will be filled and leveled with the exception of the dry hole marker.
