Re: Cecil D'Spain #1
NENW Sec. 12-6N-6E
Torrance County

The operators at this well are presently rigging up to run 60' of 14" surface casing. They were able to get 165' of used casing but intend to use only 60' of this right now. A home-made bridge, strengthened with two sacks of cement, will be used. Consequently, 10" casing can be run inside the 14" whenever the need arises.

This surface casing job should be finished by the first of next week. Plans are to continue the hole immediately afterwards.
