Re: Cecil D'Spain #1
NENW Sec. 12-6N-6E
Torrance County

Work at this well during the past week consists of running and setting 14" surface casing at 60'. This was done on November 22. Today the rig was shut down because of cold weather and bad roads. Twenty feet of cement will be set in the annulus above the bridge at 60'. The operators intend to mud up the casing to a point near the surface and then set a four foot cement block at the top of this casing.

Activity will be resumed the early part of next week if the weather permits.
