INSPECTION REPORT

May 14, 1952

SWEETMAN & ADAY
DRILLING ASSOCIATES

Re: Cecil D'Spain No. 1
NENW Sec. 12-6N-2E
Torrance County

This well was spudded on April 30, 1952 with a small cable tool rig and a 16" bit. A total depth of 79' was reached on May 7th. The formation at this depth is a very hard, buff to light grey crystalline white limestone.

Drilling is being attempted under very limited circumstances as the operators do not appear to be investing too much capital toward pushing this venture.

The well was shut down at the time of my visit, on this day, due to repairs being done to the rig.

E. A. C.
E. A. CHAVEZ,
Geologist
