INSPECTION REPORT

July 10, 1952

SWEETMAN AND ADAY
DRILLING ASSOCIATES

Re: Cecil D'Spain #1
NE1/4 Sec. 12-6N-6E
Torrance County

Total depth of the above captioned well at 9:15 a.m. today was 355' and a dark gray limestone has been penetrated for 1½ feet. Prior to this there was a 4 foot stringer of white highly calcareous, soft limestone.

The drilling rate is being limited to 5 feet per day in order to straighten up the hole. There is a proximately 125 feet of water in the hole but this is not hindering the drilling progress to any great extent.

The well was shut down Monday afternoon and all day Tuesday on account of heavy rains and consequential bad roads. Drilling was continuing satisfactorily today.

EAC.

Eugene A. Chavez
Geologist - District 4
