

NEW-MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS NOTICES

MAR 5 1938

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or its agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Place

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intentiton to do certain work as described below at the Chief Oil and

Gas Company Martha V. Pace Well No. 1 in SE 1/4
Company or Operator Lease
of Sec. 12, T. 6N, R. 7E, N. M. P. M., Estancia Field,
Torrance County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Drilling operations on the above well will be resumed on this date in accordance with the permission given to Mr. Orville J. Lee in Santa Fe, New Mexico, on January 31, 1938, by the Oil Conservation Commission. This permission was given while he was making necessary arrangements to procure the drilling bond required by your Commission. This well was shut down on June 29, 1937, at a depth of 848 feet at which depth the drilling will be resumed and carried to the expected producing horizon of 1700 feet.

Approved Mar 7 38

1. Introduction and Motivation

1.1. Background

1.2. Problem Statement

The purpose of this study is to investigate the impact of various factors on the performance of a system. The study aims to identify the key variables that influence the system's output and to develop a model that can predict the system's behavior under different conditions.

2. Literature Review

Several studies have been conducted in this area, focusing on the relationship between input variables and system performance. The findings of these studies provide a foundation for the current research.

The research methodology involves a combination of theoretical analysis and empirical data collection. The data is analyzed using statistical methods to identify trends and correlations.

The results of the study are presented in the following sections, showing the relationship between the variables and the system's performance.
