Dear Sirs:

I have at hand your C-103 which is intended to be your report of setting surface casing. You did not mention in your report anything regarding your test for water shut-off.

Since we are vitally interested in the protection of potable waters and since this particular well was in such bad condition at my last inspection, it will be necessary that you state on your C-103 as to whether a water shutoff was accomplished and how you tested it for the shut-off.

I recall that this well was in extremely bad condition on my last inspection inasmuch as an extra large hole was outside the surface casing in which surface water was standing 40 to 50' below the surface. If you will accomodate us with the required report, we will be pleased to approve same.

Very truly yours,

ELVIS A. UTZ,  
Gas Engineer
