INTRODUCTION

On behalf of Plains Marketing, L.P. (Plains), NOVA Safety and Environmental (NOVA) is pleased to submit this 2013 Annual Monitoring Report in compliance with the New Mexico Oil Conservation Division (NMOCD) letter of May 1998, requiring submittal of an Annual Monitoring Report by April 1 of each year. Beginning on or about August 8, 2006, project management responsibilities were assumed by NOVA, having previously been managed by Basin Environmental Service Technologies, LLC, (Basin). This report is intended to be viewed as a complete document with text, figures, tables and appendices. The report presents the results of the quarterly groundwater monitoring events conducted in calendar year 2013 only. However, historic data tables as well as 2013 laboratory analytical reports are provided on the enclosed data disk. A Site Location Map is provided as Figure 1.

Groundwater monitoring was conducted during each quarter of 2013 to assess the levels and extent of dissolved phase constituents and Phase Separated Hydrocarbon (PSH). Each groundwater monitoring event consisted of measuring static water levels in monitor wells, checking for the presence of PSH on the water column, and purging and sampling of each well exhibiting sufficient recharge. Monitor wells containing a thickness of PSH greater than 0.01 foot were not sampled.

SITE DESCRIPTION AND BACKGROUND INFORMATION

The legal description of the site is NW $\frac{1}{4}$, SW $\frac{1}{4}$, Section 2, Township 17 South, Range 36 East. The site is located on property owned by the State of New Mexico. The site latitude is 32° 51' 42.4" North and the site longitude is 103° 19' 54.4" West. Please reference Figure 1 for a Site Location Map. On June 10, 2005, Basin responded to a pipeline release on behalf of Plains. The release occurred as a result of the mechanical malfunction of an air eliminator check valve at an operational secondary metering station. Emergency response activities included the repair of the affected check valve and excavation of the hydrocarbon impacted soil. Approximately 15 barrels of crude oil were released from the pipeline and 0.5 barrels were recovered, resulting in a net loss of 14.5 barrels. The visibly stained surface area covers an area approximately 20 feet long by 20 feet wide. Excavation activities during the initial response activities covered an area within the fenced station approximately 20 feet long by 20 feet wide and one to four feet below ground surface (bgs). Approximately 100 cubic yards (cy) of excavated soil was placed on a polyethylene liner for future remedial activities. Please reference Appendix A for The Release Notification and Corrective Action (Form C-141).

Currently, there are 17 monitor wells (MW-1 through MW-17) and one recovery well (RW-1) on site. An automated PSH recovery system is present and consists of pneumatic total fluids pumps installed in monitor wells MW-3, MW-4, MW-8 through MW-11 and recovery well RW-1. Recovered PSH is temporarily stored in a frac tank and periodically re-injected into the Plains Pipeline transportation system.

A *Stage 1 and Stage 2 Abatement Plan* was submitted to the NMOCD in October 2006. The NMOCD has accepted the Abatement Plan as administratively complete and approved the public notice on October 25, 2011.

FIELD ACTIVITIES

Product Recovery Efforts

An automated PSH recovery system, consisting of pneumatic total fluids pumps installed in monitor wells MW-3, MW-4, MW-8 through MW-11 and recovery well RW-1, was operational during the reporting period of 2013. A measurable thickness of PSH was detected in seven monitor wells (MW-3, MW-4, MW-5, MW-8 through MW-11) and in recovery well RW-1 during the 2013 reporting period. The average thickness of PSH in monitor and recovery wells containing PSH during 2013 was 1.31 feet, with a maximum thickness of 7.05 feet occurring in monitor well MW-3 on August 21, 2013. Approximately 1,428.5 gallons (approximately 34.0 barrels) of PSH was recovered from the site during the 2013 reporting period. Approximately 5,059.0 gallons (approximately 120.5 barrels) of PSH have been recovered since the project inception. Measurable thicknesses of PSH are recorded in Table 1 and Figures 3A through 3D.

Groundwater Monitoring

Quarterly monitoring events for the reporting period were performed according to the following sampling schedule.

NMOCD APPROVED SAMPLING SCHEDULE					
Location	Schedule	Location	Schedule	Location	Schedule
MW-1	Annually	MW-7	Semi-Annually	MW-13	Quarterly
MW-2	Annually	MW-8	Quarterly	MW-14	Quarterly
MW-3	Quarterly	MW-9	Quarterly	MW-15	Quarterly
MW-4	Quarterly	MW-10	Quarterly	MW-16	Quarterly
MW-5	Quarterly	MW-11	Quarterly	MW-17	Annually
MW-6	Annually	MW-12	Quarterly	RW-1	Quarterly

The site monitor wells were gauged and sampled on February 11, May 13, August 14, and November 18, 2013. During each sampling event, sampled monitor wells were purged of approximately three well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos pump. Groundwater was allowed to recharge and samples were collected using disposable Teflon samplers. Water samples were placed in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of at a licensed disposal facility.

Locations of the monitor wells and the inferred groundwater gradient, which were constructed from measurements collected during the four quarterly monitoring events, are depicted on Figures 2A through 2D, the Inferred Groundwater Gradient Map(s). Groundwater elevation data for 2013 is provided as Table 1. Historic groundwater elevation data beginning at project inception is provided on the enclosed data disk.

The most recent Groundwater Gradient Map, Figure 2D, indicates a general gradient to the northeast.

LABORATORY RESULTS

Groundwater samples obtained during the quarterly sampling events of 2013 were delivered to Trace Analysis, Inc. in Midland, Texas for determination of Benzene, Toluene, Ethylbenzene and Xylene (BTEX) constituent concentrations by EPA Method 8021B. Polynuclear Aromatic

Hydrocarbons (PAH) analysis was not conducted during the 2013 calendar year. Based upon historic PAH analytical data, all monitor wells exhibited constituent concentrations below WQCC standards, with the exclusion of those wells containing measurable PSH thicknesses. A listing of BTEX constituent concentrations for 2013 are summarized in Table 2 and the historic PAH constituent concentrations are summarized in Table 3. Copies of the laboratory reports generated for 2013 are provided on the enclosed data disk. SUMMARY

This report presents the results of monitoring activities for the 2013 annual monitoring period. Currently, there are 17 monitor wells and one recovery well (RW-1) on site. An automated recovery system was operational during all four quarters of the 2013. The most recent Groundwater Gradient Map, Figure 2D, indicates a general gradient to the northeast.

Seven monitor wells and one recovery well (MW-3 through MW-5, MW-8 through MW-11 and RW-1) contained measurable thicknesses of PSH during the reporting period. The average thickness of PSH in monitor and recovery wells exhibiting PSH during 2013 was 1.31 feet. Approximately 1,428.5 gallons (approximately 34.0 barrels) of PSH was recovered from the site during the 2013 reporting period. Approximately 5,059.0 gallons (approximately 120.5 barrels) of PSH have been recovered since the project inception.

Review of laboratory analytical results of the groundwater samples obtained during the 2013 monitoring period indicates the BTEX constituent concentrations are below applicable NMOCD guidelines in nine (9) of the seventeen monitor wells. Monitor wells MW-3, MW-5, MW-9 through MW-11 and recovery well RW-1 consistently exhibited measurable thicknesses of PSH during gauging events.

A *Stage 1 and Stage 2 Abatement Plan* was submitted to the NMOCD in October 2006. The NMOCD has accepted the Abatement Plan as administratively complete and approved the public notice on October 25, 2011.

ANTICIPATED ACTIONS

Plains submitted a document to the NMOCD indicating that BTEX concentrations for monitor well MW-12 are below the regulatory guidelines set by the NMOCD. Therefore, a new well placed down gradient of monitor well MW-12 is not warranted at this time. Response from the NMOCD is pending.

Based on benzene concentrations during the 3rd and 4th quarters of 2013, Plains proposes to install two (2) additional monitor wells down gradient of monitor well MW-16.

Groundwater monitoring and groundwater sampling will continue in 2014. The onsite automated recovery system will continue to operate and may be modified, as conditions require. An Annual Monitoring Report will be submitted to the NMOCD before April 1, 2015.

Based on the results of the PAH analysis over the past several years, further PAH analysis will be conducted on the monitor/recovery wells which currently exhibit PSH thicknesses, as the PSH plume decreases, these wells will be sampled as necessary.

Case Narrative

Samples for project 34 Junction South were received by TraceAnalysis, Inc. on 2013-02-12 and assigned to work order 13021203. Samples for work order 13021203 were received intact without headspace and at a temperature of 4.1 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	83810	2013-02-13 at 12:00	98927	2013-02-13 at 12:00

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13021203 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project 34 Junction South were received by TraceAnalysis, Inc. on 2013-05-14 and assigned to work order 13051401. Samples for work order 13051401 were received intact without headspace and at a temperature of 1.9 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep		QC		Analysis	
		Batch	Date	Batch	Date		
BTEX	S 8021B	86105	2013-05-21 at 15:00	101624	2013-05-22 at 09:23		
BTEX	S 8021B	86164	2013-05-23 at 15:30	101692	2013-05-23 at 18:16		

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13051401 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project 34 Junction South were received by TraceAnalysis, Inc. on 2013-06-27 and assigned to work order 13062731. Samples for work order 13062731 were received intact without headspace and at a temperature of 4.8 C. Preservative removed by client necessitating rush charges.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	86964	2013-06-26 at 15:00	102678	2013-06-27 at 12:00

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13062731 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project 34 Junction South were received by TraceAnalysis, Inc. on 2013-08-15 and assigned to work order 13081513. Samples for work order 13081513 were received intact without headspace and at a temperature of 4.0 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep	Prep	QC	Analysis
		Batch	Date	Batch	Date
BTEX	S 8021B	88451	2013-08-24 at 16:32	104378	2013-08-24 at 16:32
BTEX	S 8021B	88458	2013-08-24 at 07:30	104387	2013-08-24 at 04:50
BTEX	S 8021B	88480	2013-08-26 at 16:33	104417	2013-08-26 at 16:33

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13081513 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project 34 Junction South were received by TraceAnalysis, Inc. on 2013-09-04 and assigned to work order 13090406. Samples for work order 13090406 were received intact without headspace and at a temperature of 4.5 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	88772	2013-09-05 at 16:19	104769	2013-09-05 at 16:19

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13090406 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project 34 Junction South were received by TraceAnalysis, Inc. on 2013-11-19 and assigned to work order 13111901. Samples for work order 13111901 were received intact without headspace and at a temperature of 4.7 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep		QC		Analysis	
		Batch	Date	Batch	Date		
BTEX	S 8021B	90529	2013-11-20 at 11:25	106957	2013-11-21 at 12:10		
BTEX	S 8021B	90552	2013-11-21 at 08:56	106991	2013-11-22 at 09:37		

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13111901 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
MI1	Split peak or shoulder peak
MI2	Instrument software did not integrate
MI3	Instrument software misidentified the peak
MI4	Instrument software integrated improperly
MI5	Baseline correction
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL
