RE: Online Submission of 2014 Annual Groundwater Reports

Dear Mr. Von Gonten,

Williams Field Services (Williams) is electronically submitting the attached 2014 annual groundwater monitoring reports covering the period from January 1, 2014 to December 31, 2014 for the following sites:

- Davis #1 (3RP-311-0);
- Dogie East Pit (3RP-312-0);
- Florance #40 (3RP-315-0);
- Florance #47X (3RP-317-0);
- Ice Canyon Drip (3RP-322-0);
- Jicarilla Contract #147-6 (3RP-325-0); and
- Pritchard #2A (3RP-339-0).

If you have any questions regarding these reports please contact me at 918-573-4371 or Danny.Reutlinger@Williams.com or Ashley Ager with LT Environmental at 970-385-1096 or aager@ltenv.com.

Sincerely,
Williams Field Services

Danny L. Reutlinger

APPENDICES

EXECUTIVE SUMMARY

Groundwater at the Pritchard #2A (Administrative/Environmental Order Number 3RP-339-0) (Site) is impacted by petroleum hydrocarbons in excess of the New Mexico Water Quality Control Commission (NMWQCC) groundwater standards for benzene, toluene, ethylbenzene, and total xylenes (BTEX) due to a release from two former pits: the former dehydrator pit and the former abandoned pit formerly operated by Gas Company of New Mexico (GCNM).

Impacted soil was excavated in 1997 and one monitoring well (MW-2) was installed in 1999 to assess groundwater quality. Additional groundwater monitoring wells were installed upgradient (MW-1) and downgradient (MW-3, MW-4, MW-5, and MW-6) of the former pits. Williams Field Services, LLC (Williams) purchased the GCNM facility from Public Service Company of New Mexico (PNM) in 2000 and assumed environmental liability for the Site. Since that time, Williams has monitored groundwater quality and conducted free product removal. During 2014, Williams retained LT Environmental Inc. (LTE) to complete annual sampling requirements. Between January 2014 and December 2014, LTE conducted four groundwater monitoring events (March 2014, June 2014, September 2014, and December 2014).

LTE sampled groundwater from monitoring wells MW-1, MW-3, MW-5, and MW-6 during 2014 and laboratory analytical results indicated all samples contained BTEX concentrations exceeding NMWQCC standards. Monitoring well MW-2 was dry and monitoring well MW-4 contained phase-separated hydrocarbons (PSH). Approximately 57 ounces of PSH were recovered from MW-4 during 2014 with oil adsorbent socks and manual recovery.

Williams will continue to monitor groundwater elevations and presence of PSH in the existing monitoring wells quarterly during 2015. Williams will collect groundwater samples annually for analysis of BTEX to monitor natural attenuation in monitoring wells MW-1, MW-2, MW-3, MW-5, and MW-6. Williams will manually recover PSH from monitoring well MW-4 when present and install oil absorbent socks for passive PSH recovery between site visits. If PSH is not present, the monitoring well MW-4 will be sampled annually for BTEX analysis.

Williams intends to install two additional monitoring wells to delineate the downgradient extent of impacted groundwater once a surface agreement can be negotiated with the Bureau of Land Management (BLM). The new wells will be developed and sampled to reassess the Site for plume delineation and PSH recovery options.

1.0 INTRODUCTION

LT Environmental, Inc. (LTE) on behalf of Williams Field Services, LLC (Williams) has prepared this report detailing groundwater monitoring activities completed from January 2014 through December 2014 at the Pritchard #2A (Site) (Administrative/Environmental Order Number 3RP-339-0) (Site). The scope of work for this project was continued monitoring of petroleum hydrocarbon impacts to groundwater as a result of a release from two former pits: the former dehydrator pit and the former abandoned pit.

1.1 LOCATION

The Site is located at latitude 36.837444 and longitude -107.713236 in Unit J, Section 6, Township 30 North, Range 8 West (Figure 1). The Site is at the confluence of an unnamed tributary to La Manga Canyon, which drains into Pump Canyon, in the San Juan Basin in San Juan County, New Mexico.

1.2 HISTORY

The source is two former pits: the former dehydrator pit and the former abandoned pit, which are considered a single source due to their proximity to each other. In December 1997, approximately 800 cubic yards of impacted soil were excavated from the Site. Soil samples from the floors of the two excavations revealed total petroleum hydrocarbons-diesel range organics and benzene, toluene, ethylbenzene, and total xylenes (BTEX) in excess of the New Mexico Water Quality Control Commission (NMWQCC) standards. A groundwater sample collected from a monitoring well drilled in the east pit at approximately 76.5 feet below ground surface (bgs) contained 8,600 micrograms per liter (µg/L) benzene. Sometime prior to April 2000, groundwater monitoring wells MW-2, MW-3, and MW-4 were installed, and in April 2000, MW-5 and MW-6 were installed at the Site. Between April 2000 (or earlier) and December 2012, Williams monitored groundwater at the Site. Records regarding these activities can be found in previous groundwater reports submitted to the New Mexico Oil Conservation Division (NMOCD).

On November 5, 2013, LTE performed a product bail down test at groundwater monitoring well MW-4 to assess potential product recovery options. Phase-separated hydrocarbons (PSH) recovery was minimal and only 12 percent of the original PSH thickness was recovered within 6 days. On September 12, 2013, LTE collected a sample of PSH from groundwater monitoring wells MW-2 and MW-4 for analysis of paraffins, isoparaffins, aromatics, naphthenes, and olefins (PIANO) to attempt to differentiate the chemical composition of the PSH and identify potential additional sources at the Site. The PSH samples collected indicated a natural gas condensate source, however results were inconclusive for differentiating two sources based on age or chemical composition.

2.0 METHODOLOGY

Groundwater monitoring activities were conducted at the Site in March 2014, June 2014, September 2014, and December 2014. Groundwater monitoring consisted of measuring groundwater elevations and sampling groundwater in monitoring wells MW-1, MW-3, MW-5, and MW-6. LTE recovered PSH from monitoring well MW-4.

2.1 WATER AND PRODUCT LEVEL MEASUREMENTS

LTE measured depth to groundwater in the monitoring wells with a Keck oil/water interface probe. The presence of PSH was investigated using the interface probe. The interface probe was decontaminated with Alconox™ soap and rinsed with de-ionized water prior to each measurement. These data are summarized in Table 1.

2.2 GROUNDWATER SAMPLING

Prior to sampling groundwater, LTE measured depth to groundwater and total depth of monitoring wells with a Keck oil/water interface probe. Groundwater monitoring wells containing measurable PSH were not sampled. The volume of water in each monitoring well was calculated, and a minimum of three well casing volumes of water was purged from each well using a dedicated polyvinyl chloride (PVC) bailer. As water was removed from the monitoring well, pH, electric conductivity, and temperature were monitored. Wells were purged until these properties stabilized, indicating the purge water was representative of aquifer conditions, or until the well was purged dry. Stabilization was defined as three consecutive stable readings for each water property (plus or minus (±) 0.4 units for pH, ±10 percent for electric conductivity, and ±2 degrees (º) Celsius for temperature). Purge water was containerized and disposed of at a facility designated by Williams. A copy of the 2014 field notes are presented in Appendix A.

Once each groundwater monitoring well was properly purged, groundwater samples were collected by filling three 40-milliliter (ml) glass vials. The laboratory-supplied vials were filled and capped with no air inside to prevent degradation of the sample. Samples were labeled with the date and time of collection, monitoring well designation, project name, collector's name, and parameters to be analyzed. They were immediately sealed, packed on ice, and transferred to Hall Environmental Analysis Laboratory (HEAL) under chain-of-custody (COC) procedures for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using United States Environmental Protection Agency Method 8021. COC forms were completed documenting the date and time sampled, sample number, type of sample, sampler's name, preservative used (if any), analyses required, and sampler's signature. The COC forms are included in the laboratory analytical reports in Appendix B.

2.3 GROUNDWATER CONTOUR MAPS

LTE used existing top-of-casing well elevations and measured groundwater elevations to draft groundwater contours and determine groundwater flow direction for the March, June, September, and December 2014 quarterly monitoring events (Figures 2 through 5). Contours were inferred based on groundwater elevations obtained and observations of physical characteristics at the Site (topography, proximity to irrigation ditches, etc.).

2.4 PSH RECOVERY

Oil absorbent socks and manual bailing were used to passively recover PSH in monitoring well MW-4. Oil absorbent socks were removed from the well at least seven days prior to sampling to allow groundwater to equilibrate. LTE estimated the volume of recovered PSH in the socks based on percent saturation observed in the socks. Once the oil absorbent socks were removed, LTE manually bailed as much PSH from the monitoring well as possible. After sampling, new oil absorbent socks were installed.

3.0 RESULTS

Depth to groundwater and depth to PSH data collected during the 2014 quarterly monitoring events are summarized in Table 1. Groundwater flow direction is to the southeast as depicted on Figures 3 through 5.

Laboratory analytical results indicated concentrations of benzene in groundwater sampled from monitoring well MW-1, which is upgradient of the original source, exceeded NMWQCC groundwater standards in September and December 2014. Benzene concentrations in groundwater sampled from monitoring well MW-3 exceeded the NMWQCC groundwater standard every quarter except March 2014. Benzene concentrations in groundwater sampled from downgradient monitoring wells MW-5 and MW-6 exceeded the NMWQCC groundwater standard during all 2014 quarterly monitoring events. Additionally, groundwater from monitoring well MW-6 contained concentrations of total xylenes exceeding the NMWQCC standard during three of four 2014 monitoring events. Monitoring well MW-2 was not sampled due to insufficient water volume in the monitoring well. Table 2 summarizes the groundwater analytical results and copies of the laboratory reports can be found in Appendix B.

Groundwater monitoring well MW-4 was not sampled during the 2014 quarterly monitoring events due to measurable PSH in the monitoring well. Measurable PSH ranged in thickness from 0.03 feet on December 8, 2014 to 0.32 feet on March 19, 2014, in monitoring well MW-4. A total of approximately 57 ounces of PSH was recovered from MW-4 during 2014 through passive oil adsorbent socks and manual recovery.

4.0 CONCLUSIONS

Impacts to groundwater in the source area at groundwater monitoring well MW-2 are currently unknown due to insufficient water in the monitoring well. The presence of PSH persists in groundwater monitoring well MW-4, downgradient of the source area. Surrounding monitoring wells MW-1, MW-3, MW-5, and MW-6 contained one or more BTEX constituents exceeding the NMWQCC groundwater standards in 2014.

5.0 RECOMMENDATIONS

Williams will continue quarterly monitoring groundwater elevations and presence of PSH in designated monitoring wells. Williams will collect groundwater samples from MW-1, MW-2, MW-3, MW-5, and MW-6 annually. Williams will use oil absorbent socks and manual bailing to recover PSH from groundwater monitoring well MW-4 as necessary. If PSH is not present, monitoring well MW-4 will be sampled for BTEX analysis annually. Williams intends to install two additional monitoring wells (MW-7 and MW-8) to delineate impacted groundwater once a surface agreement can be negotiated with the Bureau of Land Management (BLM). The new monitoring wells will be developed and sampled to reassess the Site for plume delineation and PSH recovery options.

Notes:
Bold - indicates sample exceeds NMWQCC standard
< - indicates result is less than laboratory reporting detection limit
* Please note when comparing to laboratory report MW-1 was mislabled as MW-7
µg/L - micrograms per liter
ND - not detected above laboratory reporting limits
NMWQCC - New Mexico Water Quality Control Commission
NS - not sampled
NS-FP - not sampled due to the presence of free phase hydrocarbons in the well
NS-IW - not sampled due to insuffiecnt water volume in the well

RE: San Juan Basin Remediation Pritchard #2A OrderNo.: 1403910

Dear Ashley Ager:

Hall Environmental Analysis Laboratory received 4 sample(s) on 3/21/2014 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

RE: Pritchard #2A OrderNo.: 1406676

Dear Brook Herb:

Hall Environmental Analysis Laboratory received 4 sample(s) on 6/14/2014 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager

RE: Pritchard #2A OrderNo.: 1409580

Dear Brooke Herb:

Hall Environmental Analysis Laboratory received 5 sample(s) on 9/12/2014 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager

Xylenes, Total	ND	2.0		µg/L	1	12/10/2014 12:49:02 AM	R23036
Surr: 4-Bromofluorobenzene	111	66.6-167		%REC	1	12/10/2014 12:49:02 AM	R23036

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
E	Value above quantitation range
J	Analyte detected below quantitation limits
O	RSD is greater than RSDlimit
R	RPD outside accepted recovery limits
S	Spike Recovery outside accepted recovery limits
B	Analyte detected in the associated Method Blank
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
P	Sample pH greater than 2.
RL	Reporting Detection Limit

QC SUMMARY REPORT

Hall Environmental Analysis Laboratory, Inc.

WO#: **1412393**

11-Dec-14

Client: LTE

Project: Pritchard #2A

Sample ID	**5ML RB**	SampType:	**MBLK**	TestCode:	**EPA Method 8021B: Volatiles**					
Client ID:	**PBW**	Batch ID:	**R23036**	RunNo:	**23036**					
Prep Date:		Analysis Date:	**12/9/2014**	SeqNo:	**680522**	Units:	**µg/L**			
Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	%RPD	RPDLimit	Qual
Benzene	ND	1.0

Chain of Custody

1. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
2. Is Chain of Custody complete?	Yes ☑	No ☐	Not Present ☐
3. How was the sample delivered?	Courier		

Log In

4. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
5. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
6. Sample(s) in proper container(s)?	Yes ☑	No ☐	
7. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
8. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
9. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
10. VOA vials have zero headspace?	Yes ☑	No ☐	No VOA Vials ☐
11. Were any sample containers received broken?	Yes ☐	No ☑	
12. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	
13. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	
14. Is it clear what analyses were requested?	Yes ☑	No ☐	
15. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	

# of preserved bottles checked for pH: _____ (<2 or >12 unless noted)

Adjusted? _____

Checked by: _____

Special Handling (if applicable)

16. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑
