Re: 2014 Annual Groundwater Monitoring Report
OXY USA, Inc.
Todd UT Hobbs R#10 ATB
Section 31, Township 7 South, Range 36 East
Roosevelt County, New Mexico. (AP085)

Mr. Griswold:

This report details the comprehensive results of the 2014 groundwater sampling events for the OXY USA, Inc. (OXY) Todd UT Hobbs R#10 (Site) located in Section 31, Township 7 South, Range 36 East, Roosevelt County, New Mexico. The Site location is shown on Figures 1 and 2.

Background

The Todd Field is an oilfield operated by various oil and pipeline companies. The Site was historically utilized as a tank battery location. The facility was acquired by OXY in March 2008. Prior to OXY acquiring the property, the facility was operated by Plains Exploration and Production (PXP), Pogo Producing Company (Pogo), and Latigo Petroleum (Latigo). As part of a due diligence assessment for Pogo, this site was inspected by Highlander Environmental Corp. (Highlander) of Midland, Texas. Due to visual observations of historical spills, Highlander supervised the installation of hand-auger and soil borings at the site. The site location is shown on Figures 1 and 2.

Several visually impacted areas were investigated around the abandoned tank battery (ATB). A total of seven hand-auger borings were advanced in these areas on July 20, 2006. Total petroleum hydrocarbon (TPH) concentrations and chloride concentrations were vertically defined in all borings with the exception of AH-3 (TPH) and AH-4 (chloride). Two borings were advanced by air-rotary drilling in the vicinity of AH-3(BH-1) and AH-4 (BH-2). Sample location BH-1 exhibited TPH concentrations below the Recommended Remedial Action Limit (RRAL) at 5'-7' below ground surface (bgs). BH-2 was advanced in an area suspected of being a former pit located north of the ATB in an area measuring 45' x 60'. Elevated chloride concentrations were found from the surface to a depth of 70 feet bgs. In order to further define the lateral extent of impact, an additional nine borings were installed and sampled.

Based on the results, one (1) boring (BH-2) was converted to a temporary 2-inch monitoring well (MW-1). Groundwater was encountered at approximately 72 feet below top of casing (TOC). On September 6, 2006 and May 15, 2007, Highlander purged and sampled the

well per the New Mexico Oil Conservation Division (NMOCD) guidelines for analyses of chlorides and benzene, toluene, ethylbenzene and xylenes (BTEX). Chloride concentrations exceeded New Mexico Water Quality Control Commission (NMWQCC) standards, while BTEX was detected at levels below the NMWQCC action levels. The monitoring well was subsequently completed as a permanent monitoring well. On July 25, 2007, the Director of the NMOCD, Environmental Bureau was notified in writing of groundwater impact at the above-referenced site in accordance with NM Rule 116.

In September 2007, an additional seven (7) monitoring wells were installed at this facility. The monitoring wells were gauged and sampled on September 21, 2007 and December 7, 2007. Chloride concentrations exceed NMWQCC standards, while BTEX constituents were detected at levels below the NMWQCC action levels.

After OXY began operations of the site, soils that were previously identified as having TPH concentrations exceeding the RRAL and shallow chloride impacts were excavated and the material transported to the Gandy-Marley landfill for disposal.

During a November 2010 meeting, the New Mexico Office of the State Engineer (OSE) stated they do not necessarily consider groundwater monitored by the eight site monitoring wells to be "public water" (i.e. hydraulically connected to the Causey-Lingo Water Basin). The OSE may consider this suspected artificial shallow water zone as "private water". The "public water" associated with the Causey-Lingo Water Basin in the vicinity of the site is noted at depths of approximately 180 feet bgs. During the subsurface investigation conducted by Tetra Tech, Inc. (Tetra Tech) at this site (and 3 other sites in the immediate area), a tan to yellow clay of moderate to high plasticity was observed below the bottom of the shallow water (at depths of 70 to 80 feet bgs). This clay layer was observed at one of the other sites to extend to depths of 130 feet bgs (termination of the soil boring). At the site with the deeper boring, water was observed at approximately 120 feet bgs. A monitoring well was installed at this other location (identified as the Todd Field West Spill Area) in this deep boring. This water was found to meet drinking water standards (chloride concentrations below action levels). The data demonstrates that the clay material above acts as an aquitard which prevents the downward migration of chlorides from the shallow water table aquifer.

OXY has completed the restoration of this area (including the removal of well locations, roads and tank pads) in order that the site can be moved towards regulatory closure and the management of the property and surrounding properties can revert to the New Mexico State Land Office (SLO). To date, OXY has excavated approximately 1,380 cubic yards of shallow soils from the pad at the Todd UT Hobbs site and transported this material to a landfill for disposal. The SLO intends to restore the sections surrounding Section 31 to native grass lands and allow the Nature Conservancy to manage the Todd Field as a Prairie Chicken Habitat.

Regulatory Requirements

The OCD has regulatory jurisdiction over oil and gas exploration and production in the State of New Mexico. This Site is subject to the OCD's rules. New Mexico Administrative Code (NMAC) 19.15.29 requires all releases over five (5) barrels of produced water be reported to the OCD using Form C-141. In addition, the operator must submit a remediation plan to be approved by the NMOCD or an abatement plan in accordance with NMAC 19.15.30.

At locations where constituents in the vadose zone are likely to leach to groundwater, the OCD rules require that groundwater be analyzed for potential contaminants as defined by the NMWQCC regulatory limits (NMAC 20.6.2.3103). Human health standards for groundwater are presented in the following table. It should be noted that chlorides are not identified by the NMWQCC as a human health standard, but rather as an "Other Standard for Domestic Water Supply".

Human Health Standard Maximum Allowable Concentration

Compound	Maximum Allowable Concentration (mg/L)
Benzene	0.01
Toluene	0.75
Ethyl-benzene	0.75
Xylenes	0.62
Chlorides	250*

***Other Standard for Domestic Water Supply**

Gauging and Monitor Well Sampling

Since the first quarter of 2010, quarterly groundwater monitoring, including the gauging, purging, and sampling of all site monitoring wells has been performed. Utilizing the water level elevation calculations, groundwater gradient maps were generated for each of the sampling events. The hydraulic gradient was to the southwest during all the sampling events. The groundwater gradient maps for the quarterly sampling events conducted in 2014 are included as Figures 3 through 5. Groundwater gauging data is summarized in Table 1. Phase separated hydrocarbon (PSH) has never been observed at the Todd UT Hobbs site.

During the monitoring events, each of the monitoring wells were properly purged and sampled for BTEX and chlorides. The samples were properly preserved and were submitted under proper chain-of-custody control to ALS Laboratory of Houston, TX for analysis of BTEX by EPA Method 8260 and chlorides by EPA Method 300.0. Analytical results indicated that benzene did not exceed the NMWQCC Human Health Standards Maximum Allowable Concentration of 0.010 mg/L in any of the monitoring wells during the three sampling events. Chloride concentrations exceeded the NMWQCC Maximum Allowable Concentration for Domestic Water Supply of 250 mg/L during all the 2014 sampling events for all monitoring wells with the exception of MW-6, and MW-7. These two (2) wells had chloride concentrations above laboratory detection limits, but below the NMWQCC Maximum Allowable Concentrations. The chloride concentrations for the sampling events are included as Figures 6 through 8. The analyses for the 2014 sampling events are shown in Table 1. Copies of the laboratory analyses are enclosed in Appendix A.

Quality Assurance/Quality Control Parameters

At the time of sampling, all monitoring well caps were opened and each well was inspected for the presence of PSH. Water level measurements were taken from a permanent mark placed at the top of the each monitoring well casing. The measurements were taken to the nearest 0.01 feet. Prior to sampling, approximately three casing volumes of water were purged from each well. Groundwater samples were collected as soon as possible, after the groundwater returned to its static level using dedicated, disposable bailers and line.

Samples were placed into labeled and preserved containers provided by the laboratory. All of the samples were shipped under proper chain-of-custody control to ALS Laboratory of Houston, Texas for analysis of BTEX by EPA Method 8260 and chlorides by EPA Method 300.0.

A trip blank sample was submitted for analysis during each sampling events. The trip blanks were below the method detection limits. Quality Assurance/Quality Control results showed all the recovery spike percentages within recommended recovery limits.

All non-dedicated down-hole monitoring equipment (i.e. water level meter, oil-water interface probe) was decontaminated between monitoring wells with laboratory grade detergent and potable water wash followed with a distilled water rinse. Purged water was combined with other produced water in the field and transported by Oxy Petroleum for management at one of their facilities.

Proposed Soil Remediation

The soil in the spill area still contains elevated concentrations of chlorides in the soils. This Site is located within an area of land that the New Mexico SLO and The Nature Conservancy plan to manage as a Prairie Chicken Habitat. Oil and gas operators have removed all surface equipment including the access roads to allow this area to return to native grass lands in an attempt to rehabilitate the prairie chicken population. In order to achieve these goals, a path-forward closure plan dated April 12, 2013 was prepared and submitted to the NMOCD. The plan was approved by Mr. Jim Griswold with the NMOCD on September 16, 2014. The approved work plan will consist of the following:

1. Excavate the area of the spill footprint to depth as discussed in the Closure Plan dated April 12, 2013, submitted to the NMOCD.
2. Place a 40-mil plastic liner at four feet below surface grade to reduce the potential leaching of surface water through the soils within the vadose zone that exhibit elevated chloride concentrations. Backfill the excavation with clean soil and revegetate with native grasses.

Groundwater Conclusions

1. The New Mexico Office of the State Engineer does not necessarily consider this artificial groundwater associated with this site as “public water” of the Causey-Lingo Water Basin.
2. The groundwater at this site is separated from the “public water” of the Causey-Lingo Water Basin by a clay aquitard observed in the area to be approximately 40 feet in thickness. This aquitard has been observed to prevent the downward migration of chloride impacted water to the “public water”.

3. PSH has never been observed in any of the site monitoring wells.
4. The hydraulic gradient direction was consistently to the southwest during all quarterly monitoring events.
5. BTEX was below laboratory reporting limits for all monitoring wells during all three sampling events.
6. During the 2014 quarterly monitoring events, chlorides ranged from 118 mg/L in monitor well MW-6 to 129,000 mg/L in monitor well MW-1. Chloride concentrations exceeded the NMWQCC Maximum Allowable Concentration for Domestic Water Supply of 250 mg/L during the 2014 sampling events for all monitoring wells with the exception of MW-6 and MW-7. These two (2) wells had chloride concentrations above laboratory detection limits, but below the NMWQCC Maximum Allowable Concentrations.

Proposed Groundwater Closure Activities

Based on the conclusions presented above, OXY proposes the following:

1. Complete the NMOCD approved soil excavation and liner placement.
2. Plugging and abandonment of all site monitoring wells.
3. Restore all surface improvements to native conditions for prairie chicken habitat.
4. Complete a yield test to classify the groundwater bearing unit at the site.

Apex and OXY understand that until all parties responsible for regulating and managing the site agree on the recommendations for site closure. Apex recommends continuation of the quarterly groundwater gauging and sampling activities until the soil excavation is complete.

Respectfully submitted,
Apex

Lyle Alsobrook
Senior Project Manager

Laboratory Results for: **55629DM GSHI PXP UT Hobbs R 10 ATB**

Dear Angela,

ALS Environmental received 9 sample(s) on Jun 07, 2014 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

Laboratory Results for: **GSHI PXP UT Hobbs R10 ATB**

Dear Angela,

ALS Environmental received 9 sample(s) on Sep 19, 2014 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

**QUALIFIERS,
ACRONYMS, UNITS**

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

Acronym	Description
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike

Work Order: **HS14110821**

Laboratory Results for: **55269DM GSHI PXP UT Hobbs R10 ATB**

Dear Angela,

ALS Environmental received 9 sample(s) on Nov 22, 2014 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

**QUALIFIERS,
ACRONYMS, UNITS**

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

Acronym	Description
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

Unit Reported	Description
µg/L	Micrograms per Liter
mg/L	Milligrams per Liter
