Subject: RE: Globe Energy Services - Soils Closure Request Report, Lea County - 1RP 3960
Date: Friday, June 2, 2017 2:20:05 PM

All,

After review of this document the OCD accepts the partial completion of soil work.

Per the report verbiage, as soil work is ongoing-

"However, the impacted soils (south area) encountered along the adjoining property line (BH-1 ESW and BH-2 ESW) showed chloride concentration of 4,160 mg/kg and 5,840 mg/kg, respectively. These impacted soils will be properly addressed to assess and proper removal of the impacted soil."

Closure of the soil portion will be reviewed once all soil work has been completed.

As per the statement-

"However, a chloride concentration of 1,610 mg/kg was detected at MW-1."

The OCD takes this as a statement affirming groundwater impact.

The OCD will continue review placement of monitor wells and requests a pump test of the extant well and future modelling of the plume.

Thank you for the update, please keep us informed.

Subject: RE: Globe Eunice Facility RP 3960 - MW-1 Installation and Sampling Results

Tomas,

In response to our telephone conference requesting additional information regarding the submitted work plan, Tetra Tech installed a monitor well (MW-1) at the Globe Services Facility located in Lea County, New Mexico. Prior to performing the proposed soil remediation, the NMOCD requested a monitor well be installed in the area of AH-4 (BH-4) outside the spill footprint. The proposed monitor well was completed as stated in the Work Plan and the Addendum to the Work Plan, dated July 19, 2016 and August 18, 2016, respectively. The NMOCD requested the groundwater data be reviewed prior to implementing the soil remediation plan as approved.

The monitor well location and groundwater sampling results are attached for your review. Once Globe receives a response from the NMOCD, the proposed soil remediation will be implemented at the site. If you have any questions or comments please call me. Thanks
