RE: 2019 SEMI ANNUAL EVAPORATION PONDS

OrderNo.: 1911A79

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 7 sample(s) on 11/22/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written in a cursive style.

Andy Freeman

Project Summary

The samples listed on the following page(s) were received for analysis at Anatek Labs, Inc. The analytical report is attached. All test results reported below comply with and meet current TNI standards, other applicable regulatory standards, and the Anatek Labs, Inc. Quality Assurance Manual, unless otherwise noted in the report.

The results in this report relate only to the samples analyzed. All soil and solid results are reported on a dry-weight basis unless otherwise noted. An estimation of uncertainty is available upon request.

This report shall not be reproduced, except in full, without the written consent of Anatek Labs, Inc.

For questions about this report, please contact Justin Doty at 208-883-2839.

Project Summary

The samples listed on the following page(s) were received for analysis at Anatek Labs, Inc. The analytical report is attached. All test results reported below comply with and meet current TNI standards, other applicable regulatory standards, and the Anatek Labs, Inc. Quality Assurance Manual, unless otherwise noted in the report.

The results in this report relate only to the samples analyzed. All soil and solid results are reported on a dry-weight basis unless otherwise noted. An estimation of uncertainty is available upon request.

This report shall not be reproduced, except in full, without the written consent of Anatek Labs, Inc.

For questions about this report, please contact Justin Doty at 208-883-2839.

RE: 2019 4th QTR GW Wells

OrderNo.: 1912138

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 5 sample(s) on 12/4/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written in a cursive style.

Project Summary

The samples listed on the following page(s) were received for analysis at Anatek Labs, Inc. The analytical report is attached. All test results reported below comply with and meet current TNI standards, other applicable regulatory standards, and the Anatek Labs, Inc. Quality Assurance Manual, unless otherwise noted in the report.

The results in this report relate only to the samples analyzed. All soil and solid results are reported on a dry-weight basis unless otherwise noted. An estimation of uncertainty is available upon request.

This report shall not be reproduced, except in full, without the written consent of Anatek Labs, Inc.

For questions about this report, please contact Justin Doty at 208-883-2839.

RE: Up Gradient MKTF Wells

OrderNo.: 1912157

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 12 sample(s) on 12/4/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Freeman', is written over a white background.

Project Summary

The samples listed on the following page(s) were received for analysis at Anatek Labs, Inc. The analytical report is attached. All test results reported below comply with and meet current TNI standards, other applicable regulatory standards, and the Anatek Labs, Inc. Quality Assurance Manual, unless otherwise noted in the report.

The results in this report relate only to the samples analyzed. All soil and solid results are reported on a dry-weight basis unless otherwise noted. An estimation of uncertainty is available upon request.

This report shall not be reproduced, except in full, without the written consent of Anatek Labs, Inc.

For questions about this report, please contact Justin Doty at 208-883-2839.

Sample Log-In Check List

Client Name: **MARATHON GALLUP**

Work Order Number: **1912157**

RcptNo: 1

Received By: **Yazmine Garduno** 12/4/2019 11:20:00 AM *[Signature]*

Completed By: **Leah Baca** 12/4/2019 2:02:16 PM *[Signature]*

Reviewed By: *[Signature]* 12/4/19

Chain of Custody

1. Is Chain of Custody sufficiently complete? Yes No Not Present
 2. How was the sample delivered? Courier

Log In

3. Was an attempt made to cool the samples? Yes No NA
 4. Were all samples received at a temperature of >0° C to 6.0°C Yes No NA
 5. Sample(s) in proper container(s)? Yes No
 6. Sufficient sample volume for indicated test(s)? Yes No
 7. Are samples (except VOA and ONG) properly preserved? Yes No
 8. Was preservative added to bottles? Yes No NA
 9. Received at least 1 vial with headspace <1/4" for AQ VOA? Yes No NA
 10. Were any sample containers received broken? Yes No
 11. Does paperwork match bottle labels? Yes No
 (Note discrepancies on chain of custody)
 12. Are matrices correctly identified on Chain of Custody? Yes No
 13. Is it clear what analyses were requested? Yes No
 14. Were all holding times able to be met? Yes No
 (If no, notify customer for authorization.)

of preserved bottles checked for pH: 24 8
 (<2 or >12 unless noted)
 Adjusted? NO

**APPENDIX I
GROUNDWATER DATA VALIDATION**

1.0 DATA VALIDATION INTRODUCTION

This summary presents data verification results for groundwater and surface water sampling activities conducted in 2019 at the Gallup Refinery pursuant to Section IV.L of Final RCRA Permit No. NM000333211 (Modified September 2017). The data review was performed in accordance with the procedures specified in the USEPA Functional Guidelines for Organic and Inorganic Data Review, and quality assurance and control parameters set by the project laboratory Hall Environmental Analysis Laboratory, Inc.

The samples evaluated include groundwater samples collected from monitoring wells in five separate groups (Group A thru Group E). There are three leak detection units (LDUs) at the new API Separator. These LDU units are located in Group B. Surface water samples are collected from the evaporation ponds and from the STP1 to EP-2 outfall.

Groundwater samples were collected 240 times during the quarterly, semiannual, and annual sampling events in 2019. Surface water samples were collected during the quarterly, semiannual, and annual sampling events 46 times. Samples from the LDUs were collected four times in 2019. All samples were submitted to Hall Environmental Analysis Laboratory (HEAL). HEAL subcontracts One Lab Nationwide for the analysis of cyanide and chemical oxygen demand (COD).

The samples from each location were analyzed for a specific list of parameters. Those parameters generally consisted of one or more of the following parameters:

- Volatile organic compounds (VOCs) by SW-846 Method 8260B;
- Semi-volatile organic compounds (SVOCs) by SW-846 Method 8270C;
- 1,2-Dibromoethane by SW-846 Method 8011
- Gasoline, diesel, and motor oil range organics by SW-846 Method 8015B;
- Total metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, iron, lead, manganese, mercury, selenium, silver, uranium, vanadium, and zinc) and dissolved metals (antimony, arsenic, barium, cadmium, calcium, chromium, copper, iron, lead, magnesium, manganese, potassium, selenium, silver, sodium, uranium, and zinc) by SW-846 Method 6010B or USEPA Methods 200.7 200.8;
- Anions (bromide, chloride, fluoride, nitrite (as N), nitrate (as N), bromide, phosphorus and sulfate) by USEPA Method 300.0;
- Mercury by USEPA Method 245.1;
- Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500CN E-2011;
- pH (SM Method 4500-H+B);
- Specific conductance (SM Method 2510B); and
- Total dissolved solids (SM Method 2510B).

Surface water samples were also analyzed for E. Coli (SM Method 9223B), biochemical oxygen demand (SM Method 5210B), chemical oxygen demand (USEPA Method 410.4), and pesticides (SW-846 Method 8081).

Additionally, 158 quality assurance samples consisting of trip blanks, field blanks, equipment rinsate blanks, and field duplicates were collected and analyzed as part of the investigation activities. Table I-1 presents a summary of the field sample identifications, laboratory sample identifications, and sample collection dates.

Data validated in "italics" was completed by a separate consultant (3rd and 4th quarter data).

2.0 QUALITY CONTROL PARAMETERS REVIEWED

Sample results were subject to a Level II data review that includes an evaluation of the following quality control (QC) parameters:

- Chain-of-Custody;
- Sample Preservation and Temperature Upon Laboratory Receipt
- Holding Times;
- Blank Contamination (method blanks, trip blanks, field blanks, and equipment rinsate blanks);
- Surrogate Recovery (for organic parameters);
- Laboratory Control Sample (LCS) Recovery and Relative Percent Difference (RPD);
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recovery and RPD;
- Duplicates (field duplicate, laboratory duplicate); and
- Other Applicable QC Parameters.

The data qualifiers used to qualify the analytical results associated with QC parameters outside of the established data quality objectives are defined below:

- | | |
|----|--|
| J+ | The analyte was positively identified; however, the result should be considered an estimated value with a potential high bias. |
| J- | The analyte was positively identified; however, the result should be considered an estimated value with a potential low bias. |
| JB | <i>The analyte was given an estimated concentration due to blank contamination</i> |
| UJ | The reporting limit for a constituent that was not detected is considered an estimated value. |
| R | Quality control indicates that the data is not usable. |

Results qualified as “J+”, “J-”, “JB”, or “UJ” are of acceptable data quality and may be used quantitatively to fulfill the objectives of the analytical program, per EPA guidelines.

The laboratory also qualified data with “J” flags for results that were greater than the method detection limit but less than the reporting limit. These are noted in the laboratory reports.

Results for the performance monitoring events that required qualification based on the data verification are summarized in Table I-2.

2.1 CHAIN-OF-CUSTODY

Chain-of-custodies (COCs) included sample identifications, date and time of collection, requested parameters, and relinquished/received signatures. The chain-of-custody documentation associated with project samples was found to be complete, with the following exceptions.

Lab Report 1903C58 – Issued April 22, 2019

- An extra EDB sample container was included in the cooler and was not listed on the COC. Hall contacted Marathon via email. The sample was added to the COC for MKTF-19.

Lab Report 1903D57 – Issued April 24, 2019

- Two 1-liter amber bottles were received without labels. The lab moved the 8270 to 8015DRO fraction for analysis.

Lab Report 1904535 – Issued May 7, 2019

- An extra EDB sample container was included in the cooler and was not listed on the COC. Hall contacted the sampler. The sample was added to the COC for DUP01; and
- The time listed on the COC for sample KA-3 was incorrect. Hall contacted the sampler. The correct time was added to the COC.

Lab Report 1904D77 – Issued May 22, 2019

- An extra sample container was included in the cooler and was not listed on the COC. Hall contacted the sampler. The sample was added to the COC for EP-12B (Pesticide 8081).

Lab Report 1904E06 – Issued May 22, 2019

- The COC listed containers for samples TRIP BLANK and FIELD BLANK for 8270 analyses. The containers were not in the shipment. The lab contacted Marathon. The analysis were not needed for the missing bottles.

Lab Report 1905120 – Issued May 22, 2019

- The COC listed containers for samples OW-14, OW-13, OW-29, DUPLICATE, OW-50, and OW-52. The containers were not in the shipment. The lab contacted Marathon;
- The 8270 analysis designated on the COC was not required; and
- The anion analysis designated on the COC was not required.

Lab Report 1905520 – Issued June 5, 2019

- The COC listed containers for sample MKTF-28. The containers were labelled MKTF-13. The lab contacted Marathon. The COC was revised to MKTF-13.

Lab Report 1904008 – Issued June 11, 2019

- The sample Field Blank was listed on the COC, but was not in the shipment;
- The COC listed a container for sample MKTF-28 for EDB analyses. The container was not in the shipment; The lab did not receive containers for anion or 8270 analyses for sample OW-30. The lab contacted Marathon via email. The analysis was not needed for the missing bottles; and
- The sample times were added by the lab for samples MKTF-29 and DUPLICATE.

Lab Report 1905D86 – Issued June 17, 2019

- The COC listed containers for samples OW-10, DUPLICATE, NAPIS-3, STP1 to EP-2, WEST LDU, and EAST LDU. The containers were not in the shipment. The lab contacted Marathon;
- The COD analysis were not needed for the missing bottles for WEST LDU and EAST LDU;
- The VOA vials for OW-10, DUPLICATE, and NAPIS-3 were submitted on May 30, 2019; and
- The missing bottles for sample STP1 to EP-2 was not explained on the COC.

Lab Report 1905E66 – Issued June 17, 2019

- The sample containers that were missing on the COC for Lab Report 1905D86 for OW-10, DUPLICATE, NAPIS-3, and STP1 to EP-2 were submitted.

Lab Report 1905710 – Issued July 2, 2019

- The COC listed containers for sample MKTF-37. The containers were labelled MKTF-38. The lab contacted Marathon. The COC was revised to MKTF-38.

Lab Report 1908756 – Issued September 26, 2019

- *The sample time for MW-1 was adjusted from 12:55 to 14:55.*
- *The 200.7 method for Total and Dissolved Metals were added for samples OW-29, OW-13, and DUPLICATE.*

Lab Report 1908D36 – Issued September 26, 2019

- *The COC did not include analysis for 8270C. The laboratory added the analysis to the laboratory report.*

Lab Report 1908D66 – Issued September 30, 2019

- *Sample MKTF-43 was broken during the extraction process for 8270. The sample was not able to be reported due to insufficient sample volume for re-extraction. The duplicate sample was from MKTF-43 and the 8270 data could be used for the MKTF-43 sample.*
- *Samples MKTF-4 and DUPLICATE were listed on the COC but were not included in the shipping cooler. The samples will be recollected on another lab report.*

Lab Report 1908900 – September 16, 2019

- *The time listed on the bottle was incorrect for sample BW-1C. The lab was instructed to use the time listed on the COC.*

Lab Report 1910D02 - November 25, 2019

- One of the VOAs for the sample TRIP BLANK was received broken.

2.2 SAMPLE PRESERVATION AND TEMPERATURE UPON LABORATORY RECEIPT

Samples were received by the laboratory at a temperature of 6.0 degrees Celsius (°C) or lower. Data qualification on lower temperature samples was not required. Samples collected were received preserved and intact by Hall Environmental Laboratories, Inc., with the following exceptions:

Lab Report 1903C58 – April 22, 2019

- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for MKTF-19, MKTF-4, and MKTF-11 to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.
- The temperatures of shipping cooler numbers 2 (11.3°C), 3 (7.3°C), and 5 (8.1°C) were above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1903D57 – April 24, 2019

- The temperatures of shipping cooler numbers 2 (8.6 °C) and 3 (6.4 °C) were slightly above the 6.0 °C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1904008 – June 11, 2019

- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for “OAPIS-1” and “MKTF-30” to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.
- The temperature of shipping cooler number 3 (6.4°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1904535 – May 7, 2019

- The temperatures of shipping cooler numbers 1 (11.9 °C) and 2 (6.8 °C) were above the 6.0 °C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1904D77 – Issued May 22, 2019

- The temperature of shipping cooler number 2 (9.5°C) was above the 6.0 °C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1905D86 – June 17, 2019

- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for OW-10 and DUPLICATE to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1905360 – Issued May 30, 2019

- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for MKTF-27 to achieve the acceptable pH. The container was held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1905448 – Issued June 5, 2019

- The temperature of shipping cooler number 1 (7.0°C) was slightly above the 6.0 °C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1905520 – Issued June 5, 2019

- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for MKTF-19 to achieve the acceptable pH. The container was held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1905865 – Issued June 5, 2019

- The temperature of shipping cooler number 1 (9.7°C) was above the 6.0 °C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1905866 – Issued June 5, 2019

- The temperature of shipping cooler number 1 (9.7°C) was above the 6.0 °C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1906248 – June 24, 2019

- The lab added 0.4 ml HNO₃ to the 125 ml sample container for OW-58 to achieve the acceptable pH. The lab added 0.5 ml HNO₃ to the 125 ml sample container for DUPLICATE to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.
- The temperature of shipping cooler number 1 (6.7°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1908C74 – September 26, 2019

- *The temperature of shipping cooler number 3 (6.6°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.*

Lab Report 1908D36 – September 26, 2019

- The temperature of shipping cooler number 3 (6.6°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1908D65 – September 26, 2019

- The lab added 0.5 ml HNO₃ to the 125 ml sample container for samples with dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1908E37 – October 1, 2019

- The temperature of shipping cooler number 2 (6.5°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1908E39 – October 1, 2019

- The temperature of shipping cooler number 2 (6.5°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1908952 – September 26, 2019

- The temperature of the shipping cooler (7.1°C) was slightly above the 6.0°C requirements. The samples were collected the same day and chilled. The data was not qualified.

Lab Report 1910A53 – December 11, 2019

- The temperature of the shipping cooler (0.4°C) was below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.

Lab Report 1910C12 – November 25, 2019

- The temperature of the shipping coolers (0.4°C and 0.7°C) were below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.
- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for OAPIS-1 and DUPLICATE for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1910C12 – December 23, 2019

- The lab added 0.3 ml HNO₃ to the 125 ml sample containers for MKT-4 and DUPLICATE for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1910D00 – November 25, 2019

- The temperature of the shipping coolers (1.5°C, 1.2°C, 1.2°C, and 0.5°C) were below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.

Lab Report 1911A00 – January 16, 2020

- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for EP-7 for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1911A04 – January 16, 2020

- The lab added 0.4 ml HNO₃ to the 125 ml sample containers for PW-4 for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1911A79 – January 16, 2020

- The temperature of the shipping coolers (0.9°C, 1.2°C, and 0.6°C) were below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.
- The lab added 0.5 ml HNO₃ to the 125 ml sample containers for STP1 to EP-2 for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.

Lab Report 1910619 – November 6, 2019

- The temperature of the shipping cooler (0.8°C) was below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.

Lab Report 1910981 – November 19, 2019

- *The temperature of the shipping cooler (-1.3°C) was below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.*
- *The lab added 0.5 ml HNO₃ to the 125 ml sample containers for OW-60 and DUPLICATE for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.*

Lab Report 1911178 – December 23, 2019

- *The temperature of shipping cooler 2 (0.4°C) were below the 2.0°C requirements. The samples were not noted as being frozen or broken. The data was not qualified.*
- *The lab added 0.4 ml HNO₃ to the 125 ml sample containers for MKTF-39, DUPLICATE, and OW-57 for dissolved metals analyses to achieve the acceptable pH. The containers were held for 24 hours prior to dissolved metals analysis. The data was not qualified.*

2.3 HOLDING TIMES

All samples were extracted and analyzed within method-specified holding time limits, with the exception of some samples analyzed for phosphorus, pH, nitrogen or nitrite (as N) and E. Coli. Data qualification for exceeding holding times is shown on Table I-2.

2.4 BLANK CONTAMINATION

2.4.1 Method Blank

Method blanks were analyzed at the appropriate frequency. Target compounds were not detected in the method blanks, with the following exceptions:

Lab Report 1903C58 – Issued April 22, 2019

- Copper – 0.0016 mg/L - Lab Batch ID A59060;
- Arsenic – 0.00019 mg/L – Lab Batch ID D58733;
- Mercury – 0.000055 mg/L – Lab Batch ID 44192; and
- Benzoic Acid – 9.0 ug/L – Lab Batch ID 43941.

Lab Report 1903D57 – Issued April 24, 2019

- Barium (Total) – 0.00052 mg/L - Lab Batch ID 44011;
- Beryllium (Total) - 0.00027 mg/L - Lab Batch ID 44011; and
- Benzoic Acid – 10 ug/L – Lab Batch ID 44004.

Lab Report 1903D57 – Issued February 26, 2019

- Antimony (Dissolved) – 0.00036 mg/L - Lab Batch ID C57720;
- Uranium (Dissolved) – 0.00021 mg/L – Lab Batch ID C57720; and
- Mercury - 0.000068 mg/L – Lab Batch ID 43101.

Lab Report 1902323 – Issued February 27, 2019

- Manganese (Total) – 0.00029 mg/L - Lab Batch ID 43081;
- Antimony (Dissolved) – 0.00036 mg/L – Lab Batch ID C57720;
- Uranium (Dissolved) – 0.00021 mg/L – Lab Batch ID C57720;
- Arsenic (Total) - 0.000061 mg/L – Lab Batch ID 43081;
- Selenium (Total) – 0.00012 mg/L – Lab Batch ID 43081;
- Mercury – 0.000068 mg/L – Lab Batch ID 43101;
- Acetone – 1.8 ug/L – Lab Batch C57627; and
- Methylene Chloride – 0.21 ug/L – Lab Batch C57627.

Lab Report 1902673 – Issued March 20, 2019

- Uranium (Dissolved) – 0.00014 mg/L – Lab Batch ID C57846;
- Mercury – 0.000039 mg/L – Lab Batch ID 43375; and
- Benzoic Acid – 6.5 ug/L – Lab Batch ID 43262.

Lab Report 1902922 – Issued March 20, 2019

- Iron (Total) – 0.017 mg/L – Lab Batch ID 43379;
- Copper (Dissolved) – 0.0019 mg/L – Lab Batch ID C57957;
- Phosphorus – 0.083 mg/L – Lab Batch ID R57874;
- Sulfate – 0.071 mg/L – Lab Batch ID A58183; and
- Benzoic Acid – 7.2 ug/L – Lab Batch ID 43384.

Lab Report 1904008 – Issued June 11, 2019

- Mercury – 0.000069 mg/L – Lab Batch ID 44281;
- Phosphorus – 0.047 mg/L – Lab Batch ID R58947;
- 1,2-Dichloroethane (EDC) – 0.27 ug/L – Lab Batch ID R58893; and
- Chloromethane – 0.42 ug/L – Lab Batch ID R58893.

Lab Report 1904535 – Issued May 7, 2019

- Copper (Dissolved) – 0.0040 mg/L – Lab Batch ID C59158;
- Silver (Dissolved) – 0.00097 mg/L – Lab Batch ID C59158;
- Aluminum (Total) – 0.0085 mg/L – Lab Batch ID 44260;
- Iron (Total) – 0.0068 mg/L – Lab Batch ID 44260;
- Manganese (Total) – 0.00030 mg/L – Lab Batch ID 44260;
- Copper (Total) – 0.0044 mg/L – Lab Batch ID 44260;
- Zinc (Total) – 0.0076 mg/L – Lab Batch ID 44260;
- Benzoic Acid – 9.3 ug/L – Lab Batch ID 44353 (Analysis Date: 4/17/19); and
- Benzoic Acid – 8.2 ug/L – Lab Batch ID 44353 (Analysis Date: 4/22/19).

Lab Report 1904D77 – Issued May 22, 2019

- Aluminum (Total) – 0.0051 mg/L – Lab Batch ID A59578;
- Aluminum (Total) – 0.0042 mg/L – Lab Batch ID 44753;
- Manganese – 0.00047 mg/L – Lab Batch ID 44753;
- Aluminum (Dissolved) – 0.0051 mg/L – Lab Batch ID A59578;
- Mercury – 0.000048 mg/L – Lab Batch ID 44812; and
- Benzoic Acid – 8.8 ug/L – Lab Batch 44610.

Lab Report 1904D77 – Issued May 22, 2019

- Aluminum (Total) – 0.0042 mg/L – Lab Batch ID 44753;
- Manganese – 0.00047 mg/L – Lab Batch ID 44753;
- Mercury – 0.000048 mg/L – Lab Batch ID 44812; and
- Benzoic Acid – 8.8 ug/L – Lab Batch 44729.

Lab Report 1905B47 – Issued June 10, 2019

- Aluminum (Total) – 0.0047 mg/L – Lab Batch ID 45289; and
- Selenium – 0.00030 mg/L – Lab Batch ID B60379.

Lab Report 1905B47 – Issued June 10, 2019

- Aluminum (Total) – 0.0047 mg/L – Lab Batch ID 45289; and
- Selenium – 0.00030 mg/L – Lab Batch ID B60379.

Lab Report 1905D86 – Issued June 17, 2019

- Iron (Total) – 0.0090 mg/L – Lab Batch ID 45455; and
- Benzyl Alcohol – 2.4 ug/L – Lab Batch ID 45334.

Lab Report 1905E66 – Issued June 17, 2019

- Iron (Total) – 0.0090 mg/L – Lab Batch ID 45455.

Lab Report 1906F76 – Issued July 16, 2019

- Aluminum (Total) – 0.0029 mg/L – Lab Batch ID A6107;
- Iron (Total) – 0.018 mg/L – Lab Batch ID 45895;
- Aluminum (Dissolved) – 0.0029 mg/L – Lab Batch ID A6107;
- Methylene Chloride – 0.48 ug/L – Lab Batch ID R61220; and
- Di-n-octyl phthalate – 4.0 ug/L – Lab Batch ID 46000.

Lab Report 1905120 – Issued May 22, 2019

- Aluminum (Total) – 0.0032 mg/L – Lab Batch ID 44734;
- Acetone – 2.5 ug/L – Lab Batch ID R59627;
- Chloromethane – 0.37 ug/L – Lab Batch ID R59627;
- Acetone – 2.3 ug/L – Lab Batch ID R59712;
- Chloromethane – 0.37 ug/L – Lab Batch ID R59712; and
- Methylene Chloride – 0.15 ug/L – Lab Batch ID R59712.

Lab Report 1905142 – Issued May 22, 2019

- Aluminum (Total) – 0.0056 mg/L – Lab Batch ID 44900;
- Chloromethane – 0.38 ug/L – Lab Batch ID R59820; and
- Benzoic Acid – 6.8 ug/L – Lab Batch ID 44729.

Lab Report 1905360 – Issued May 30, 2019

- Aluminum (Total) – 0.0029 mg/L – Lab Batch ID 44984;
- Chloride – 0.092 mg/L – Lab Batch ID A59981; and
- Chloromethane – 0.37 ug/L – Lab Batch ID R59856.

Lab Report 1905360 – Issued May 30, 2019

- Aluminum (Total) – 0.0029 mg/L – Lab Batch ID 44984; and
- Mercury – 0.000052 mg/L – Lab Batch ID 44813.

Lab Report 1905360 – Issued June 5, 2019

- Aluminum (Total) – 0.0059 mg/L – Lab Batch ID 45086.

Lab Report 1905520 – Issued June 5, 2019

- Manganese (Total) – 0.00038 mg/L – Lab Batch ID 45106;
- Aluminum (Total) – 0.0091 mg/L – Lab Batch ID A60216;
- Aluminum (Dissolved) – 0.0031 mg/L – Lab Batch ID A60186;
- Aluminum (Dissolved) – 0.0091 mg/L – Lab Batch ID A60216;
- Cadmium (Dissolved) – 0.00061 mg/L – Lab Batch ID A60216;
- Thallium (Dissolved) – 0.000049 mg/L – Lab Batch ID D59847; and
- Mercury – 0.000046 mg/L – Lab Batch ID 45309.

Lab Report 1905710 – Issued July 2, 2019

- Aluminum (Total) – 0.0044 mg/L – Lab Batch ID 45167;
- Aluminum (Total) – 0.0091 mg/L – Lab Batch ID A60216;
- Aluminum (Dissolved) – 0.0031 mg/L – Lab Batch ID A60186;
- Aluminum (Dissolved) – 0.0091 mg/L – Lab Batch ID A60216;
- Cadmium (Dissolved) – 0.00061 mg/L – Lab Batch ID A60216; and
- Methylene Chloride – 0.16 ug/L – Lab Batch ID R60108.

Lab Report 1905716 – Issued June 10, 2019

- Barium (Total) – 0.00086 mg/L – Lab Batch ID 45220;
- Cadmium (Total) – 0.0011 mg/L – Lab Batch ID 45220;
- Iron (Total) – 0.012 mg/L – Lab Batch ID 45220; and
- Aluminum (Dissolved) – 0.0035 mg/L – Lab Batch ID E60186.

Lab Report 1905865 – Issued June 5, 2019

- Aluminum (Total) – 0.0053 mg/L – Lab Batch ID 45221;
- Chromium (Total) – 0.0019 mg/L – Lab Batch ID 45221;
- Silver (Total) – 0.0028 mg/L – Lab Batch ID 45221;
- Aluminum (Dissolved) – 0.0035 mg/L – Lab Batch ID E60186;
- Uranium (Dissolved) – 0.00012 mg/L – Lab Batch ID D60134;
- Methylene Chloride – 0.16 ug/L – Lab Batch ID R60108; and
- Bis(2-ethylhexyl) phthalate – 4.7 ug/L – Lab Batch ID 45061.

Lab Report 1905866 – Issued June 5, 2019

- Aluminum (Total) – 0.0053 mg/L – Lab Batch ID 45221;
- Chromium (Total) – 0.0019 mg/L – Lab Batch ID 45221;
- Silver (Total) – 0.0028 mg/L – Lab Batch ID 45221;
- Aluminum (Dissolved) – 0.0035 mg/L – Lab Batch ID E60186;
- Uranium (Dissolved) – 0.00012 mg/L – Lab Batch ID D60134;
- Methylene Chloride – 0.16 ug/L – Lab Batch ID R60108; and
- Bis(2-ethylhexyl) phthalate – 4.7 ug/L – Lab Batch ID 45061.

Lab Report 1906248 – Issued June 24, 2019

- Bis(2-ethylhexyl) phthalate – 6.7 ug/L – Lab Batch ID 45493;
- Di-n-octyl phthalate – 6.0 ug/L – Lab Batch ID 45493; and
- Pyrene – 2.7 ug/L – Lab Batch ID 45493.

Lab Report 1908B79 – Issued September 24, 2019

- Antimony (Total) – 0.00053 mg/L – Lab Batch ID B62654; and
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID R62329.

Lab Report 1908B82 – Issued September 18, 2019

- Antimony (Total) – 0.00053 mg/L – Lab Batch ID B62654;
- 1,2,4-Trimethylbenzene – 0.22 ug/L – Lab Batch ID R62400;
- 1,2-Dichloroethane – 0.38 ug/L – Lab Batch ID R62400;
- Chloromethane – 1.3 ug/L – Lab Batch ID R62400; and
- Methylene chloride – 0.24 ug/L – Lab Batch ID R62400.

Lab Report 1908C74 – Issued September 26, 2019

- Antimony (Total) – 0.00053 mg/L – Lab Batch ID B62654;
- Antimony (Dissolved) – 0.00092 mg/L – Lab Batch ID A62791;
- 1,2,4-Trimethylbenzene – 0.22 ug/L – Lab Batch ID R62400;
- 1,2-Dichloroethane – 0.38 ug/L – Lab Batch ID R62400;
- Chloromethane – 1.3 ug/L – Lab Batch ID R62400;
- Methylene Chloride – 0.24 ug/L – Lab Batch ID R62400; and
- Methylene Chloride – 0.23 ug/L – Lab Batch ID R62427.

Lab Report 1908D36– Issued September 26, 2019

- Antimony (Dissolved) – 0.00092 mg/L – Lab Batch ID A62791; and
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID R62416.

Lab Report 1908D65 – Issued September 26, 2019

- Antimony (Dissolved) – 0.00092 mg/L – Lab Batch ID A62791;
- Mercury – 0.000090 mg/L – Lab Batch ID 47429;
- Nitrogen, Nitrate – 0.034 mg/L – Lab Batch ID R62406;
- Naphthalene – 0.31 ug/L – Lab Batch ID R62438;
- 2-Methylnaphthalene – 0.97 ug/L – Lab Batch ID R62438;
- Chloroethane – 0.53 ug/L – Lab Batch ID R62438; and
- 4-Methyl-2-pentanone – 1.7 ug/L – Lab Batch ID R62438.

Lab Report 1908D66 – September 30, 2019

- Mercury – 0.000055 mg/L – Lab Batch ID 47460;
- Naphthalene – 0.31 ug/L – Lab Batch ID R62438;
- 2-Methylnaphthalene – 0.97 ug/L – Lab Batch ID R62438;
- Chloroethane – 0.53 ug/L – Lab Batch ID R62438;
- 4-Methyl-2-pentanone – 1.7 ug/L – Lab Batch ID R62438;
- 2-Methylnaphthalene – 0.95 ug/L – Lab Batch ID B62438; and
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID B62438.

Lab Report 1908E37 – October 1, 2019

- Aluminum (Total) – 0.0026 mg/L – Lab Batch ID 47348;
- Thallium (Total) – 0.000089 mg/L – Lab Batch ID 47348;
- Mercury – 0.000055 mg/L – Lab Batch ID 47460;
- 1-Methylnaphthalene – 1.1 ug/L – Lab Batch ID R62464;
- 2-Methylnaphthalene – 1.3 ug/L – Lab Batch ID R62464; and
- 1,2,4-Trichlorobenzene – 0.83 ug/L – Lab Batch ID R62464.

Lab Report 1908E39 – October 1, 2019

- Aluminum (Total) – 0.0026 mg/L – Lab Batch ID 47348;
- Thallium (Total) – 0.000089 mg/L – Lab Batch ID 47348;
- Mercury – 0.000093 mg/L – Lab Batch ID 47461;

Lab Report 1908G22 – September 26, 2019

- Cadmium (Dissolved) – 0.00062 mg/L – Lab Batch ID B63075;
- 2-Methylnaphthalene – 0.93 ug/L – Lab Batch ID B62559; and
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID B62559.

Lab Report 1908G89 – September 26, 2019

- Antimony (Dissolved) – 0.00092 mg/L – Lab Batch ID A62791;
- Mercury – 0.00090 mg/L – Lab Batch ID 47429;
- 2-Methylnaphthalene – 0.93 ug/L – Lab Batch ID B62559; and
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID B62559.

Lab Report 1908756 – Issued September 26, 2019

- Aluminum (Total) – 0.0031 mg/L – Lab Batch ID 46990;
- Antimony (Dissolved) – 0.00051 mg/L – Lab Batch ID B62319;
- Mercury – 0.000041 mg/L – Lab Batch ID 46818;
- 4-Methyl-2-pentanone – 1.7 ug/L – Lab Batch ID R62227; and
- 2,4-Dinitrophenol – 4.4 ug/L – Lab Batch ID 46870.

Lab Report 1908900 – September 16, 2019

- Uranium (Total) – 0.00010 mg/L – Lab Batch ID D62319;
- 4-Methyl-2-pentanone – 1.7 ug/L – Lab Batch ID R62227;
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID S62227;
- Carbon disulfide – 0.51 ug/L – Lab Batch ID R62266; and
- 2,4-Dinitrophenol – 4.4 ug/L – Lab Batch ID 46870.

Lab Report 1908906 – September 19, 2019

- Aluminum (Total) – 0.0034 mg/L – Lab Batch ID 46967;
- Iron (Total) – 0.020 mg/L – Lab Batch ID 46967;
- Carbon disulfide – 0.51 ug/L – Lab Batch ID R62266; and
- 2,4-Dinitrophenol – 4.4 ug/L – Lab Batch ID 46870.

Lab Report 1908952 – September 26, 2019

- Aluminum (Total) – 0.0031 mg/L – Lab Batch ID 46990;
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID R62329;
- 1,2,4-Trimethylbenzene – 0.21 ug/L – Lab Batch ID B62329;
- 1,3,5-Trimethylbenzene – 0.22 ug/L – Lab Batch ID B62329;
- Naphthalene – 0.33 ug/L – Lab Batch ID B62329;
- 2-Methylnaphthalene – 0.96 ug/L – Lab Batch ID B62329; and
- 4-Methyl-2-pentanone – 1.8 ug/L – Lab Batch ID B62329.

Lab Report 1910A53 – December 11, 2019

- Aluminum (Total) – 0.0040 mg/L – Lab Batch ID 48305;
- Cadmium (Total) – 0.0018 mg/L – Lab Batch ID 48305
- Aluminum (Dissolved) – 0.0041 mg/L – Lab Batch ID A64376;
- Copper (Dissolved) – 0.0015 mg/L – Lab Batch ID A64376; and
- Bis(2-ethylhexyl)phthalate – 0.28 ug/L – Lab Batch ID 191023025.

Lab Report 1910C12 – November 25, 2019

- Beryllium (Dissolved) – 0.00079 mg/L – Lab Batch ID D64295;
- Mercury – 0.000041 mg/L – Lab Batch ID 48363; and
- Bis(2-ethylhexyl)phthalate – 0.33 ug/L – Lab Batch ID 191025034.

Lab Report 1910D00 – November 25, 2019

- Beryllium (Dissolved) – 0.00086 mg/L – Lab Batch ID C64376 and
- Bis(2-ethylhexyl)phthalate – 0.33 ug/L – Lab Batch ID 191027013.

Lab Report 1910D02 – November 25, 2019

- Beryllium (Dissolved) – 0.00086 mg/L – Lab Batch ID C64376;
- Mercury – 0.00019 mg/L – Lab Batch ID 48564; and
- Bis(2-ethylhexyl)phthalate – 0.33 ug/L – Lab Batch ID 191029031.

Lab Report 1910D49 – November 25, 2019

- Mercury – 0.00012 mg/L – Lab Batch ID 48665.

Lab Report 1910E89 – December 23, 2019

- Antimony (Dissolved) – 0.00043 mg/L – Lab Batch ID B64363.

Lab Report 1910F99 – December 23, 2019

- Lead (Total) – 0.00011 mg/L – Lab Batch ID 48556 and
- Antimony (Dissolved) – 0.00043 mg/L – Lab Batch ID B64363.

Lab Report 1911A00 – January 16, 2020

- Iron (Total) – 0.016 mg/L – Lab Batch ID 49031.

Lab Report 1911A79 – January 16, 2020

- Aluminum (Total) – 0.0036 mg/L – Lab Batch ID 49040.

Lab Report 1910619 – November 6, 2019

- Aluminum (Dissolved) – 0.0031 mg/L – Lab Batch ID B63946.

Lab Report 1910981 – November 19, 2019

- Cadmium (Total) – 0.0024 mg/L – Lab Batch 48277;
- Aluminum (Dissolved) – 0.0031 mg/L – Lab Batch ID B63946;
- Sulfate – 0.12 mg/L – Lab Batch ID A63795; and
- Dimethyl Phthalate – 4.0 ug/L – Lab Batch ID 48239.

Lab Report 1911178 – December 23, 2019

- Beryllium (Total) – 0.00032 mg/L – Lab Batch ID 48793;
- Copper (Dissolved) – 0.0031 mg/L – Lab Batch ID A64680; and
- Antimony (Dissolved) – 0.00043 mg/L – Lab Batch ID B64363.

Lab Report 1911858 – January 15, 2020

- Aluminum (Dissolved) – 0.0025 mg/L – Lab Batch ID 48941 and
- Aluminum (Total) – 0.0038 mg/L – Lab Batch ID 48941.

Lab Report 1911963 -January 16, 2020

- Iron (Total) – 0.016 mg/L – Lab Batch ID 49031.

Lab Report 1912138 – January 21, 2020

- Barium (Total) – 0.00081 mg/L – Lab Batch ID 49231;
- Naphthalene – 0.37 ug/L – Lab Batch ID R64991;
- 1-Methylnaphthalene – 0.93 ug/L – Lab Batch ID R64991;
- 2-Methylnaphthalene – 0.83 ug/L – Lab Batch ID R64991;
- Hexachlorobutadiene – 0.33 ug/L – Lab Batch ID R64991;
- 1,2,3-Trichlorobenzene – 0.35 ug/L – Lab Batch ID R64991; and
- 1,2,4-Trichlorobenzene – 0.35 ug/L – Lab Batch ID R64991.

Lab Report 1912157 – March 11, 2020

- Manganese (Total) – 0.00019 mg/L – Lab Batch ID 49175;
- Antimony (Total) – 0.00019 mg/L – Lab Batch ID 49175;
- Naphthalene – 0.38 ug/L – Lab Batch ID R65009;
- 1-Methylnaphthalene – 0.96 ug/L – Lab Batch ID R65009;
- 2-Methylnaphthalene – 0.78 ug/L – Lab Batch ID R65009;
- Hexachlorobutadiene – 0.38 ug/L – Lab Batch ID R65009;
- 1,2,3-Trichlorobenzene – 0.34 ug/L – Lab Batch ID R65009;
- 1,2,4-Trichlorobenzene – 0.33 ug/L – Lab Batch ID R65009;
- Naphthalene – 0.37 ug/L – Lab Batch ID R64991;
- 1-Methylnaphthalene – 0.93 ug/L – Lab Batch ID R64991;
- 2-Methylnaphthalene – 0.83 ug/L – Lab Batch ID R64991;
- Hexachlorobutadiene – 0.33 ug/L – Lab Batch ID R64991;
- 1,2,3-Trichlorobenzene – 0.35 ug/L – Lab Batch ID R64991; and
- 1,2,4-Trichlorobenzene – 0.35 ug/L – Lab Batch ID R64991.

2.4.2 Trip Blank

Trip blanks were analyzed and target compounds were not detected in the trip blanks, with the following exceptions:

Lab Report 1903C58-002 – April 22, 2019

Acetone was reported at a detection of 4.3 ug/L. The data was flagged “J” (Analyte detected below quantitation limit). Acetone was not detected in the method blank (Lab Batch ID R58813). The data was not qualified.

Lab Report 1903D57-002 – April 24, 2019

Acetone was reported at a detection of 4.1 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R58857). The data was not qualified.

Lab Report 1902323-002 – February 27, 2019

Acetone was reported at a detection of 1.7 ug/L. The data was flagged “J”. Acetone was detected in the method blank (Lab Batch ID C57627). The data was qualified “J+”.

Lab Report 1902673-011 – March 20, 2019

Acetone was reported at a detection of 1.6 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID A57800). The data was not qualified.

Lab Report 1904008-002 – June 11, 2019

Acetone was reported at a detection of 3.2 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R58893). The data was not qualified.

Lab Report 1904E06-001 – May 22, 2019

Acetone was reported at a detection of 2.0 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID B59810). The data was not qualified.

Lab Report 1905B47-002 – May 21, 2019

Acetone was reported at a detection of 3.2 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R60205). The data was not qualified.

Chlorobenzene was reported at a detection of 1.2 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the method blank (Lab Batch ID R60205). The data was not qualified.

Lab Report 1906F76-002 – June 27, 2019

Acetone was reported at a detection of 2.4 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R61220). The data was not qualified.

Lab Report 1905142-002 – May 2, 2019

Acetone was reported at a detection of 5.6 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R59820). The data was not qualified.

Lab Report 1905360-002 – May 6, 2019

Acetone was reported at a detection of 4.4 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R59856). The data was not qualified.

Lab Report 1905710-002 – May 14, 2019

Benzene was reported at a detection of 0.55 ug/L. The data was flagged “J”. Benzene was not detected in the method blank (Lab Batch ID R60052). The data was not qualified.

Acetone was reported at a detection of 6.1 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R60052). The data was not qualified.

Lab Report 1905865-002 – May 15, 2019

Acetone was reported at a detection of 5.6 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R60108). The data was not qualified.

Lab Report 1905866-002 – May 16, 2019

Acetone was reported at a detection of 6.5 ug/L. The data was flagged “J”. Acetone was not detected in the method blank (Lab Batch ID R60108). The data was not qualified.

Lab Report 1908756-008 – September 26, 2019

Toluene was reported at a detection of 0.52 ug/L. The data was flagged “J”. Toluene was not detected in the associated samples. The data was not qualified.

Acetone was reported at a detection of 1.4 ug/L. The data was flagged “J”. Acetone was not detected in the associated samples. The data was not qualified.

Chlorobenzene was reported at a detection of 0.67 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Lab Report 1908756-002 – September 26, 2019

Toluene was reported at a detection of 0.45 ug/L. The data was flagged “J”. Toluene was not detected in the associated samples. The data was not qualified.

Acetone was reported at a detection of 0.57 ug/L. The data was flagged “J”. Acetone was not detected in the associated samples. The data was not qualified.

Lab Report 1908B79-005 – September 24, 2019

1-Methylnaphthalene was reported at a detection of 0.9 ug/L. 1-Methylnaphthalene was detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

2-Methylnaphthalene was reported at a detection of 1.2 ug/L. 2-Methylnaphthalene was detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Chlorobenzene was reported at a detection of 0.62 ug/L. Chlorobenzene was detected in MKTF-35 at a concentration greater than the reporting limit but less than 10 times the blank concentration and was qualified “JB”. Chlorobenzene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Naphthalene was reported at a detection of 0.58 ug/L. Naphthalene was detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Toluene was reported at a detection of 0.53 ug/L. Toluene was detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Lab Report 1908C74-008 – September 26, 2019

Toluene was reported at a detection of 0.41 ug/L. The data was flagged “J”. Toluene was detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Acetone was reported at a detection of 1.8 ug/L. The data was flagged “J”. Acetone was not detected in the associated samples. The data was not qualified.

Chlorobenzene was reported at a detection of 0.49 ug/L. The data was flagged "J". Chlorobenzene was not detected in the associated samples. The data was not qualified.

Lab Report 1908D36 – September 26, 2019

Toluene was reported at a detection of 0.62 ug/L. The data was flagged "J". Toluene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Chlorobenzene was reported at a detection of 0.50 ug/L. The data was flagged "J". Chlorobenzene was not detected in the associated samples. The data was not qualified.

Lab Report 1908D65 – September 26, 2019

Toluene was reported at a detection of 0.50 ug/L. The data was flagged "J". Toluene was detected in NAPIS-2, OAPIS-1, and DUPLICATE at concentrations greater than the reporting limit but less than 10 times the blank concentration and were qualified "JB". Toluene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Chlorobenzene was reported at a detection of 0.62 ug/L. The data was flagged "J". Chlorobenzene was not detected in the associated samples. The data was not qualified.

Lab Report 1908D66 – September 26, 2019

1-Methylnaphthalene was reported at a detection of 0.78 ug/L. The data was flagged “J”. 1-Methylnaphthalene was detected in in MKTF-43 at a concentration greater than the reporting limit but less than 10 times the blank concentration and was qualified “JB”. 1-Methylnaphthalene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

2-Methylnaphthalene was reported at a detection of 1.0 ug/L. The data was flagged “J”. 2-Methylnaphthalene was detected in in MKTF-43 at a concentration greater than the reporting limit but less than 10 times the blank concentration and was qualified “JB”. 2-Methylnaphthalene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Benzene was reported at a detection of 0.37 ug/L. The data was flagged “J”. Benzene was detected in in MKTF-43 at a concentration greater than the reporting limit but less than 10 times the blank concentration and was qualified “JB”. Benzene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Chlorobenzene was reported at a detection of 0.64 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Naphthalene was reported at a detection of 0.63 ug/L. Naphthalene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Toluene was reported at a detection of 0.53 ug/L. The data was flagged “J”. Toluene detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Total xylenes was reported at a detection of 0.68 ug/L. Total xylenes was detected in in MKTF-43 at a concentration greater than the reporting limit but less than 10 times the blank concentration and was qualified “J”. Total xylenes detected in the associated samples were greater than 10 times the blank concentration and did not require qualification.

Lab Report 1908E37 – October 1, 2019

Benzene was reported at a detection of 0.42 ug/L. The data was flagged “J”. Benzene was detected in MKTF-31 and SMW-2 at concentrations greater than the reporting limit but less than 10 times the blank concentration and were qualified “JB”. Benzene detected in the associated samples that were greater than 10 times the blank concentration and did not require qualification.

Chlorobenzene was reported at a detection of 0.65 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Toluene was reported at a detection of 0.56 ug/L. The data was flagged “J”. Toluene was detected in the associated samples greater than 10 times the blank concentration and did not require qualification.

Lab Report 1908G22 – September 26, 2019

Acetone was reported at a detection of 1.3 ug/L. The data was flagged “J”. Acetone was detected in the MKTF-25 greater than 10 times the blank concentration and did not require qualification.

Chlorobenzene was reported at a detection of 0.63 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Toluene was reported at a detection of 0.51 ug/L. The data was flagged “J”. Toluene was not detected in the associated samples. The data was not qualified.

Lab Report 1908900 – September 16, 2019

Chlorobenzene was reported at a detection of 0.66 ug/L. The data was flagged “J”. Chlorobenzene detected in the associated samples that were greater than 10 times the blank concentration and did not require qualification.

Toluene was reported at a detection of 0.55 ug/L. The data was flagged “J”. Toluene detected in the associated samples that were greater than 10 times the blank concentration and did not require qualification.

Lab Report 1908906 – September 19, 2019

Acetone was reported at a detection of 1.5 ug/L. The data was flagged “J”. Acetone was detected in OW-10 and DUPLICATE at concentrations greater than the reporting limit but less than 10 times the blank concentration and were qualified “JB”.

Chlorobenzene was reported at a detection of 0.63 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Toluene was reported at a detection of 0.56 ug/L. The data was flagged “J”. Toluene was not detected in the associated samples. The data was not qualified.

Lab Report 1908952 – September 16, 2019

Chlorobenzene was reported at a detection of 0.64 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Toluene was reported at a detection of 0.53 ug/L. The data was flagged “J”. Toluene was not detected in the associated samples. The data was not qualified.

Lab Report 1910A53 – December 11, 2019

Chlorobenzene was reported at a detection of 0.42 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Lab Report 1910C12 – November 25, 2019

Chlorobenzene was reported in both trip blanks at detections of 0.37 ug/L and 0.40 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Chloroform was reported in the trip blank from 10/22/2019 at a detection of 0.20 ug/L. The data was flagged “J”. Chloroform was not detected in the associated samples. The data was not qualified.

Lab Report 1910D02 – November 25, 2019

Methylene Chloride was reported in the trip blank at 0.21 ug/L. The data was flagged “J”. Methylene Chloride was not detected in the associated samples. The data was not qualified.

Lab Report 1910981 – November 19, 2019

Chlorobenzene was reported in the trip blanks at 0.39 ug/L and 0.41 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Chloroform was reported in the trip blank at a detection of 0.21 ug/L and 0.20 ug/L. The data was flagged “J”. Chloroform was not detected in the associated samples. The data was not qualified.

Lab Report 1910D49-002 – November 25, 2019

Chlorobenzene was reported in the trip blank at 0.36 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Chloroform was reported in the trip blank at a detection of 0.21 ug/L. The data was flagged “J”. Chloroform was detected in DUPLICATE and MKTF-43 at concentrations greater than the reporting limit but less than 10 times the blank concentration and were qualified “JB”.

Lab Report 1911178 – December 23, 2019

Chlorobenzene was reported in the trip blank at 0.48 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Toluene was reported in the trip blank at 0.36 ug/L. The data was flagged “J”. Toluene detected in the associated samples that were greater than 10 times the blank concentration and did not require qualification.

Lab Report 1911963 – January 16, 2020

Chlorobenzene was reported in the trip blank at 0.37 ug/L. The data was flagged “J”. Chlorobenzene was not detected in the associated samples. The data was not qualified.

Chloroform was reported in the trip blank at a detection of 0.58 ug/L. The data was flagged “J”. Chloroform was not detected in the associated samples. The data was not qualified.

Lab Report 1912138 – January 21, 2020

2-Methylnaphthalene was reported in the trip blank at 0.36 ug/L. The data was flagged “J”. 2-Methylnaphthalene was detected in the field blank and was qualified “J”.

2.4.3 Field Blanks/Equipment Rinsate Blank

Field and equipment rinsate blanks were collected and analyzed. Target compounds were not detected in the field blanks or equipment blanks with the following exceptions:

Lab ID 1903C58-001 (Field Blank)

- Benzene – 0.28 ug/L. The data was flagged “J”. In Lab Batch ID R58813 benzene was not detected in the method blank. The data was not qualified.
- Naphthalene – 0.34 ug/L. The data was flagged “J”. In Lab Batch ID R58813 naphthalene was not detected in the method blank. The data was not qualified.
- Acetone – 4.1 ug/L. The data was flagged “J”. In Lab Batch ID R58813 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1903D57-001 (FIELD BLANK)

- Naphthalene – 0.35 ug/L. The data was flagged “J”. In Lab Batch ID R58857 naphthalene was not detected in the method blank. The data was not qualified.
- Acetone – 4.6 ug/L. The data was flagged “J”. In Lab Batch ID R58857 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1902323-001 (FIELD BLANK)

- Benzene – 0.35 ug/L. The data was flagged “J”. In Lab Batch ID R57586 benzene was not detected in the method blank. The data was not qualified.
- Toluene – 0.35 ug/L. The data was flagged “J”. In Lab Batch ID R57586 toluene was not detected in the method blank. The data was not qualified.
- Acetone – 5.8 ug/L. The data was flagged “J”. In Lab Batch ID R57586 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1902673-001 (Field Blank)

- Benzene – 0.31 ug/L. The data was flagged “J”. In Lab Batch ID A57800 benzene was not detected in the method blank. The data was not qualified.
- Toluene – 0.27 ug/L. The data was flagged “J”. In Lab Batch ID A57800 toluene was not detected in the method blank. The data was not qualified.
- Naphthalene – 0.38 ug/L. The data was flagged “J”. In Lab Batch ID A57800 naphthalene was not detected in the method blank. The data was not qualified.
- Acetone – 2.8 ug/L. The data was flagged “J”. In Lab Batch ID A57800 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1902922-001 (Field Blank)

- Benzene – 0.46 ug/L. The data was flagged “J”. In Lab Batch ID R57879 benzene was not detected in the method blank. The data was not qualified.
- Toluene – 0.38 ug/L. The data was flagged “J”. In Lab Batch ID R57879 toluene was not detected in the method blank. The data was not qualified.

Lab ID 1904535-004 (EB01)

- Boron (Dissolved) – 0.0058 mg/L. The data was flagged “J”. In Lab Batch ID C59158 boron was not detected in the method blank. The data was not qualified.
- Copper (Dissolved) – 0.0015 mg/L. The data was flagged “J”. In Lab Batch ID C59158 copper was detected in the method blank. The data was qualified with “J+”.
- Zinc (Dissolved) – 0.021 mg/L. The data was flagged “J”. In Lab Batch ID A59216 zinc was not detected in the method blank. The data was not qualified.
- Aluminum (Total) – 0.0048 mg/L. The data was flagged “J”. In Lab Batch ID 44260 aluminum was detected in the method blank. The data was qualified with “J+”.
- Boron (Total) – 0.0055 mg/L. The data was flagged “J”. In Lab Batch ID 44260 boron was not detected in the method blank. The data was not qualified.
- Iron (Total) – 0.014 mg/L. The data was flagged “J”. In Lab Batch ID 44260 iron was detected in the method blank. The data was qualified with “J+”.
- Manganese (Total) – 0.00081 mg/L. The data was flagged “J”. In Lab Batch ID 44260 manganese was detected in the method blank. The data was qualified with “J+”.
- Benzoic Acid – 11 ug/L. The data was flagged “J”. In Lab Batch ID 44353 benzoic acid was detected in the method blank. The data was qualified with “J+”.
- Benzene – 0.21 ug/L. The data was flagged “J”. In Lab Batch ID R59248 benzene was not detected in the method blank. The data was not qualified.
- Toluene – 1.1 ug/L. In Lab Batch ID R59248 toluene was not detected in the method blank. The data was not qualified.

Lab ID 1904535-005 (FB01)

- Barium (Dissolved) – 0.00098 mg/L. The data was flagged “J”. In Lab Batch ID C59158 barium was not detected in the method blank. The data was not qualified.
- Boron (Dissolved) – 0.0048 mg/L. The data was flagged “J”. In Lab Batch ID C59158 boron was not detected in the method blank. The data was not qualified.
- Calcium (Dissolved) – 0.090 mg/L. The data was flagged “J”. In Lab Batch ID C59158 calcium was not detected in the method blank. The data was not qualified.
- Copper (Dissolved) – 0.0027 mg/L. The data was flagged “J”. In Lab Batch ID C59158 copper was detected in the method blank. The data was qualified with “J+”.
- Manganese (Dissolved) – 0.00052 mg/L. The data was flagged “J”. In Lab Batch ID C59158 manganese was not detected in the method blank. The data was not qualified.
- Zinc (Dissolved) – 0.023 mg/L. In Lab Batch ID A59216 zinc was not detected in the method blank. The data was not qualified.
- Aluminum (Total) – 0.0071 mg/L. The data was flagged “J”. In Lab Batch ID 44260 aluminum was detected in the method blank. The data was qualified with “J+”.
- Barium (Total) – 0.00075 mg/L. The data was flagged “J”. In Lab Batch ID 44260 barium was not detected in the method blank. The data was not qualified.
- Boron (Total) – 0.0051 mg/L. The data was flagged “J”. In Lab Batch ID 44260 boron was not detected in the method blank. The data was not qualified.
- Cadmium (Total) – 0.00078 mg/L. The data was flagged “J”. In Lab Batch ID 44260 cadmium was not detected in the method blank. The data was not qualified.
- Iron (Total) – 0.0074 mg/L. The data was flagged “J”. In Lab Batch ID 44260 iron was detected in the method blank. The data was qualified with “J+”.
- Manganese (Total) – 0.00057 mg/L. The data was flagged “J”. In Lab Batch ID 44260 manganese was detected in the method blank. The data was qualified with “J+”.
- Zinc (Total) – 0.013 mg/L. The data was flagged “J”. In Lab Batch ID 44260 zinc was detected in the method blank. The data was qualified with “J+”.
- Toluene – 1.8 ug/L. In Lab Batch ID R59248 toluene was not detected in the method blank. The data was not qualified.

Lab ID 1904D77-009 (Field Blank)

- Benzene – 0.18 ug/L. The data was flagged “J”. In Lab Batch ID B59810 benzene was not detected in the method blank. The data was not qualified.
- Toluene – 0.49 ug/L. The data was flagged “J”. In Lab Batch ID R59810 toluene was not detected in the method blank. The data was not qualified.
- Acetone – 18 ug/L. The data was flagged “J”. In Lab Batch ID R59810 acetone was not detected in the method blank. The data was not qualified.
- 2-Butanone – 24 ug/L. The data was flagged “J”. In Lab Batch ID R59810 2-butanone was not detected in the method blank. The data was not qualified.
- 2-Hexanone – 1.8 ug/L. The data was flagged “J”. In Lab Batch ID R59810 2-hexanone was not detected in the method blank. The data was not qualified.

Lab ID 1904E06-002 (Field Blank)

- Acetone – 2.2 ug/L. The data was flagged “J”. In Lab Batch ID R59810 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1906F76-001 (Field Blank)

- Acetone – 3.4 ug/L. The data was flagged “J”. In Lab Batch ID R61220 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1905142-001 (Field Blank)

- Naphthalene – 0.28 ug/L. The data was flagged “J”. In Lab Batch ID R59820 naphthalene was not detected in the method blank. The data was not qualified.
- Acetone – 4.1 ug/L. The data was flagged “J”. In Lab Batch ID R59820 acetone was not detected in the method blank. The data was not qualified.

Lab ID 1905360-001 (Field Blank)

- Naphthalene – 0.31 ug/L. The data was flagged “J”. In Lab Batch ID R59856 naphthalene was not detected in the method blank. The data was not qualified.

Lab ID 1905364-001 (Field Blank)

- Naphthalene – 0.31 ug/L. The data was flagged “J”. In Lab Batch ID R59856 naphthalene was not detected in the method blank. The data was not qualified.

Lab ID 1905866-001 (Field Blank)

- Naphthalene – 0.31 ug/L. The data was flagged “J”. In Lab Batch ID R60108 naphthalene was not detected in the method blank. The data was not qualified.

Lab ID 1908B79-009 (EB-1)

- Acetone – 3.1 ug/L. The data was flagged “J”. Acetone was detected in MKTF-35 and MKTF-17 above the laboratory reporting limit but below 10 times the blank concentration and was qualified with JB.
- Nitrogen, Nitrate (as N) – 0.059 mg/L. The data was flagged “J”. Nitrogen, Nitrate (as N) was detected in MKTF-33 above the laboratory reporting limit but below 10 times the blank concentration and was qualified with JB. Nitrogen, Nitrate (as N) was detected in MKTF-34 greater than 10 times the blank concentration and did not require qualification.
- Boron (Dissolved) – 0.01 mg/L. The data was flagged “J”. Boron (Dissolved) was detected in several samples greater than 10 times the blank concentration and did not require qualification.
- Copper (Dissolved) – 0.0014 mg/L. The data was flagged “JB”. Copper (Dissolved) was detected in MKTF-17, MKTF-33, MKTF-34, MKTF-35, and DUP-20190819-1 above the laboratory reporting limit but below 10 times the blank concentration and was qualified with JB.
- Zinc (Dissolved) – 0.0039 mg/L. The data was flagged “JB”. Zinc was detected in MKTF-17, MKTF-19, MKTF-22, MKTF-33, MKTF-34, MKTF-35, and DUP-20190819-1 above the laboratory reporting limit but below 10 times the blank concentration and was qualified with JB.
- Boron (Total) – 0.0089 mg/L. The data was flagged “J”. Total Boron was detected in several samples greater than 10 times the blank concentration and did not require qualification.

Lab ID 1908C74-007 (EB-2)

- Nitrogen, Nitrate (as N) – 0.078 mg/L. The data was flagged “J”. Associated samples that were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with JB. Detected associated samples that were greater than 10 times the blank concentration did not require qualification.
- Boron (Dissolved) – 0.010 mg/L. The data was flagged “J”. Detected associated samples that were greater than 10 times the blank concentration did not require qualification.
- Zinc (Dissolved) – 0.0079 mg/L. The data was flagged “J”. Detected associated samples were detected less than the blank result and were flagged with a “U” qualifier.
- Boron (Total) – 0.0095 mg/L. The data was flagged “J”. Detected associated samples that were greater than 10 times the blank concentration did not require qualification.
- Benzene – 0.19 ug/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration did not require qualification.
- Methyl tert-butyl ether – 0.51 ug/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration did not require qualification.
- 1,2,4-Trimethylbenzene – 0.32 ug/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration did not require qualification.
- Naphthalene – 0.30 ug/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration did not require qualification.
- 1-Methylnaphthalene – 0.40 ug/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration did not require qualification.
- Acetone – 3.3 ug/L. The data was flagged “J”. Acetone was detected in Trip Blank above the laboratory reporting limit but below 10 times the blank concentration and was qualified with JB.

Lab ID 1908D66-001 (EB-3)

- Acetone – 7.5 ug/L. The data was flagged “J”. DUP-082219-1 was detected above the laboratory reporting limit but below 10 times the blank concentration and was qualified with “JB”. MKTF-10 was greater than 10 times the blank concentration and did not require qualification.
- Nitrogen, Nitrate (as N) – 0.053 mg/L. The data was flagged “J”. MKTF-10 was detected above the laboratory reporting limit but below 10 times the blank concentration and was qualified with “JB”. Detected associated samples that were greater than 10 times the blank concentration did not require qualification.
- Antimony (Dissolved) – 0.00054 mg/L. The data was flagged “J”. MKTF-10 and MKTF-44 were detected above the laboratory reporting limit but below 10 times the blank concentration and were qualified “JB”.
- Boron (Dissolved) – 0.0098 mg/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration and did not require qualification.
- Zinc (Dissolved) – 0.0051 mg/L. The data was flagged “J”. Associated samples that were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”.
- Boron (Total) – 0.011 mg/L. The data was flagged “J”. Detected associated samples were greater than 10 times the blank concentration and did not require qualification.
- Mercury – 0.000079 mg/L. The data was flagged “J”. Associated samples that were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”.
- Uranium (Total) – 0.0001 mg/L. The data was flagged “J”. Associated samples that were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”. The detected associated samples that were greater than 10 times the blank concentration did not require qualification.

Lab ID 1908E39-010 (EB-4)

- Acetone – 3.3 ug/L. The data was flagged “J”. The associated samples were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”.
- Boron (Dissolved) – 0.014 mg/L. The data was flagged “J”. The detected associated samples were greater than 10 times the blank concentration and did not require qualification.
- Zinc (Dissolved) – 0.0075 mg/L. The data was flagged “J”. The associated samples were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”.
- Boron (Total) – 0.011 mg/L. The data was flagged “J”. The detected associated samples were greater than 10 times the blank concentration and did not require qualification.
- Mercury – 0.000097 mg/L. The data was flagged “J”. The associated samples were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”.

Lab ID 1912138-001 (FIELD BLANK)

- 1,2,3-Trichlorobenzene – 0.41 ug/L. The data was flagged “J”. 1,2,3-Trichlorobenzene was not detected in the associated samples and did not require qualification.
- 1,2,4-Trichlorobenzene – 0.39 ug/L. The data was flagged “J”. 1,2,4-Trichlorobenzene was not detected in the associated samples and did not require qualification.
- 1-Methylnaphthalene – 1.0 ug/L. The data was flagged “J”. 1-Methylnaphthalene was not detected in the associated samples and did not require qualification.
- 2-Methylnaphthalene – 0.89 ug/L. The data was flagged “J”. The associated samples were detected above the laboratory reporting limit but below 10 times the blank concentration were qualified with “JB”.
- Hexachlorobutadiene – 0.38 ug/L. The data was flagged “J”. Hexachlorobutadiene was not detected in the associated samples and did not require qualification.
- Naphthalene – 0.42 ug/L. The data was flagged “J”. Naphthalene was not detected in the associated samples and did not require qualification.

Lab ID 1912157-006 (EB01)

- *Sodium (Dissolved) – 0.53 mg/L. The data was flagged “J”. Sodium was not detected in the associated samples and did not require qualification.*
- *Zinc (Dissolved) – 0.049 mg/L. The data was flagged “J”. Zinc was not detected in the associated samples and did not require qualification.*
- *Barium (Total) – 0.00054 mg/L. The data was flagged “J”. Barium was not detected in the associated samples and did not require qualification.*
- *Iron (Total) – 0.0063 mg/L. The data was flagged “J”. Iron was not detected in the associated samples and did not require qualification.*
- *Manganese (Total) – 0.00083 mg/L. The data was flagged “J”. Manganese was not detected in the associated samples and did not require qualification.*
- *Acetone – 4.3 ug/L. The data was flagged “J”. Associated samples that were detected above the laboratory reporting limit but below 10 times the blank concentration.*
- *Benzyl Alcohol – 5.17 ug/L. The data was flagged “J”. Benzyl Alcohol was not detected in the associated samples and did not require qualification.*

Data qualification for field blanks and equipment rinsate blanks is shown on Table I-2.

2.4.4 Common Laboratory Contaminants

Per USEPA guidelines, common laboratory contaminants for VOC analysis are acetone, 2-butanone (MEK), cyclohexane, chloromethane, and methylene chloride. Data qualification for contaminants in method blanks is shown on Table I-2.

2.4.5 Methanol Blanks

Methanol Blanks are not applicable and were not analyzed.

2.5 SURROGATE RECOVERY

Surrogate recoveries for the organic and inorganic analyses were performed at the required frequency and were within laboratory acceptance limits, with the following exceptions:

Lab ID 1903C58-008 (DUPLICATE)

Surrogate recovery for DNOP was below the lower acceptance limit (Lab Batch ID 43943). The associated detected field sample result for diesel range organics (DRO) is qualified “J-” due to a potential low bias.

Lab Report 1903C58-008 (DUPLICATE)

Surrogate recovery for 2-Fluorophenol, Phenol-d₅, 2,4,6-Tribromophenol and Nitrobenzene-d₅ were below the lower acceptance limit (Lab Batch ID 43941). The associated detected field sample results for fluorene and naphthalene were qualified “J-” due to a potential low bias. No additional semi-volatile constituents were reported above the detection limit.

Lab Report 1903C58-009 (MKTF-34)

Surrogate recovery for 2-Fluorophenol, Phenol-d₅, 2,4,6-Tribromophenol, Nitrobenzene-d₅, and 2-Fluorobiphenyl were below the lower acceptance limit (Lab Batch ID 43941). No semi-volatile constituents were reported above the detection limit. Data qualification was not required.

Lab Report 1903C58-017 (MKTF-38)

Surrogate recovery for 2-Fluorophenol and Phenol-d₅ were below the lower acceptance limit (Lab Batch ID 43941). The associated detected field sample results for benzoic acid was flagged "J". No additional semi-volatile constituents were reported above the detection limit. Data qualification was not required.

Lab Report 1902322-005 (OW-56) Date Reported: February 28, 2019

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G57625). The associated detected field sample result for gasoline range organics (GRO) is qualified "J+" due to a potential high bias.

Surrogate recovery for dibromofluoromethane was above the upper acceptance limit (Lab Batch ID A57627). The associated detected field sample result for methyl tert-butyl ether (MTBE) and 1,2-Dichloroethane (EDC) is qualified "J+" due to a potential high bias.

Lab Report 1902322-006 (DUPLICATE)

Surrogate recovery for 2-Fluorobiphenyl was below the lower acceptance limit (Lab Batch ID 43051). No semi-volatile constituents were reported above the detection limit. Data qualification was not required.

Lab Report 1902673-004 (MKTF-43)

Surrogate recovery for 2-Fluorophenol, Phenol-d₅, and 2,4,6-Tribromophenol were below the lower acceptance limit (Lab Batch ID 43262). No semi-volatile constituents were reported above the detection limit with the exception of benzoic acid (8.5 ug/L). The data was flagged "J" in the lab report.

Lab Report 1902673-005 (DUPLICATE (sp))

Surrogate recovery for 2,4,6-Tribromophenol were below the lower acceptance limit (Lab Batch ID 43262). No semi-volatile constituents were reported above the detection limit with the exception of benzoic acid (13 ug/L) and bis(2-ethylhexyl) phthalate (8.3 ug/L). The data was flagged "J" in the lab report.

Lab Report 1902673-009 (OW-59)

Surrogate recovery for BFB was below the lower acceptance limit (Lab Batch ID A57777). The associated detected field sample result for gasoline range organics (GRO) is qualified "J-" due to a potential low bias.

Lab Report 1902922-006 (MKTF-21)

Surrogate recovery for 2-Fluorophenol, Phenol-d₅, and 2,4,6-Tribromophenol were below the lower acceptance limit (Lab Batch ID 43384). Bis(2-ethylhexyl)phthalate (43 ug/L) was reported above the detection limit and was flagged "J". The 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene data was qualified "J-" due to a potential low bias.

Lab Report 1904008-010 (MKTF-27)

Surrogate recovery for 2-Fluorophenol, Phenol-d₅, and 2,4,6-Tribromophenol were below the lower acceptance limit (Lab Batch ID 44061). No semi-volatile constituents were reported above the detection limit with the exception of benzoic acid (7.6 ug/L). The data was flagged "J" in the lab report.

Lab Report 1904535-001 (NAPIS-2)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R59232). The associated detected field sample result for GRO is qualified “J+” due to a potential high bias.

Lab Report 1904535-002 (KA-3)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R59232). The associated detected field sample result for GRO is qualified “J+” due to a potential high bias.

Lab Report 1904535-006 (West LDU)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R59232). The associated detected field sample result for GRO is qualified “J+” due to a potential high bias.

Lab Report 1904535-007 (East LDU)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R59232). The associated detected field sample result for GRO is qualified “J+” due to a potential high bias.

Lab Report 1904535

Surrogate recovery for 2-Fluorophenol, Phenol-d₅, and 2,4,6-Tribromophenol were below the lower acceptance limit (Lab Batch ID 44407). No semi-volatile constituents were reported above the detection limit in the method blank with the exception of benzoic acid (8.2 ug/L). The data was flagged “J” in the lab report.

Lab Report 1904D77-001 (EP-12B)

Surrogate recovery for Toluene-d₈ was below the lower acceptance limit (Lab Batch ID B59810). The remaining three surrogates were reported to have acceptable recovery limits. No volatile constituents were detected above the reporting limit. The data was not qualified.

Lab Report 1904D77-005 (DUPLICATE)

Surrogate recovery for Nitrobenzene-d₅ was below the lower acceptance limit (Lab Batch ID 44610). The remaining five surrogates were reported to have acceptable recovery limits. No semi-volatile constituents were detected above the reporting limit. The data was not qualified.

Lab Report 1904D77-006 (EP-9)

Surrogate recovery for Nitrobenzene-d₅ and 2-Fluorobiphenyl were below the lower acceptance limit (Lab Batch ID 44610). The remaining four surrogates were reported to have acceptable recovery limits. No semi-volatile constituents were detected above the reporting limit. The data was not qualified.

Lab Report 1905D86-008 (West LDU)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G60450). The associated detected field sample result for GRO is qualified “J+” due to a potential high bias.

Lab Report 1905D86-009 (East LDU)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G60450). The associated detected field sample result for GRO is qualified “J+” due to a potential high bias.

Lab Report 1906F76-003 (MKTF-38)

Surrogate recovery for Nitrobenzene-d₅ and 2-Fluorobiphenyl were below the lower acceptance limit (Lab Batch ID 46000). No semi-volatile constituents were reported above the detection limit. Data qualification was not required.

Lab Report 1905142-007 (OW-59)

Surrogate recovery for 2,4,6-Tribromophenol was below the lower acceptance limit (Lab Batch ID 44729). The remaining five surrogates were reported to have acceptable recovery limits. No semi-volatile constituents were reported above the detection limit. The data was not qualified.

Lab Report 1905142-007 (OW-59)

Surrogate recovery for 4-bromofluorobenzene was above the upper acceptance limit (Lab Batch ID R59820). The remaining three surrogates were reported to have acceptable recovery limits. The data was not qualified.

Lab Report 1905142-007 (OW-59)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G59820). The associated detected field sample result for GRO is qualified "J+" due to a potential high bias.

Lab Report 1905360-006 (MKTF-27)

Surrogate recovery for 2-Fluorophenol and 2,4,6-Tribromophenol were below the lower acceptance limit (Lab Batch ID 44850). The remaining four surrogates were reported to have acceptable recovery limits. No semi-volatile constituents were reported above the detection limit in the method blank. The data was not qualified.

Lab Report 1905448-004 (MKTF-43)

Surrogate recovery for DNOP was above the upper acceptance limit (Lab Batch ID 44821). No diesel range organics (DRO) or motor oil organics (MRO) were reported above the detection limit. The associated detected field sample results for DRO and MRO are qualified "UJ" due to a potential high bias.

Lab Report 1905448-004 (MKTF-43)

Surrogate recovery for 2,4,6-Tribromophenol was below the lower acceptance limit (Lab Batch ID 44850). The remaining five surrogates were reported to have acceptable recovery limits. No semi-volatile constituents were reported above the detection limit in the method blank. The data was not qualified.

Lab Report 1905448-007 (DUPLICATE)

Surrogate recovery for DNOP was below the lower acceptance limit (Lab Batch ID 44821). The DRO concentration was above the detection limit and the sample results were qualified "J-" due to a potential low bias. MRO was not reported over the detection limit. The sample results for MRO were qualified "UJ" due to a potential low bias.

Lab Report 1905865-003 (OW-64)

Surrogate recovery for Nitrobenzene-d₅ was above the upper acceptance limit (Lab Batch ID 45061). The remaining five surrogates were reported to have acceptable recovery limits. The semi-volatile constituents bis(2-ethylhexyl)phthalate, 2,4-dimethylphenol, 1-methylnaphthalene, and naphthalene were reported to have concentrations above the detection limit. The data was flagged "J" in the lab report. Data qualification was not required.

Lab Report 1905865-004 (OW-63)

Surrogate recovery for 2,4,6-Tribromophenol was above the upper acceptance limit (Lab Batch ID 45061). The remaining five surrogates were reported to have acceptable recovery limits. The semi-volatile constituents carbazole, 2,4-dimethylphenol, fluorene, naphthalene, and phenol were reported to have concentrations above the detection limit. The data for carbazole, 2,4-dimethylphenol, fluorene was flagged "J" in the lab report. Data qualification was not required.

Lab Report 1906248-006 (MKTF-39)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G60459). The associated detected field sample result for GRO is qualified "J+" due to a potential high bias.

Surrogate recovery for Nitrobenzene-d₅ was above the upper acceptance limit (Lab Batch ID 45061). The remaining five surrogates were reported to have acceptable recovery limits. The eight semi-volatile constituents were reported to have concentrations above the detection limit. Data qualification was not required.

Surrogate recovery for 4-Bromofluorobenzene was above the upper acceptance limit (Lab Batch ID W60676). The remaining three surrogates were reported to have acceptable recovery limits. The eleven semi-volatile constituents were reported to have concentrations above the detection limit. Data qualification was not required.

Lab Report 1908B79-001 (MKTF-35) and 1908B79-004 (DUP-20190819-1)

Surrogate recovery for phenol-d₅ was below the lower acceptance limit (Lab Batch ID 46954). The remaining five surrogates were reported to have acceptable recovery limits. The data was not qualified.

Lab Report 1908B79-007 (MKTF-17)

Surrogate recovery for phenol-d₅, 2-fluorophenol, and 2,4,6-tribromophenol were below the lower acceptance limits (Lab Batch ID 46954). The surrogate recovery for 2-fluorophenol and 2,4,6-tribromophenol were less than 10% the recovery which indicates poor precision. The detected data was qualified "J-" and the non-detect was qualified "R" to indicate poor precision.

Lab Report 1908B79-008 (MKTF-33)

Surrogate recovery for DNOP (Lab Batch ID 46957) was above the upper acceptance limit. The associated sample was not detected and did not require qualification.

Lab Report 1908B82-002 (OW-64)

Surrogate recovery for DNOP (Lab Batch ID 46957) was above the upper acceptance limit. The associated detected field sample result for DRO is qualified "J+" due to a potential high basis. The associated field sample for MRO was not detected and was qualified "UJ" due to a potential low bias.

Lab Report 1908D36-002 (OW-56) and 1908D36-004 (OW-59)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID A62420). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1908D36-004 (OW-59)

Surrogate recovery for 2-fluorobiphenyl, phenol-d₅, and 2,4,6-tribromophenol were below the lower acceptance limit (Lab Batch ID 4700). The surrogate recovery for 2-fluorophenol and 2,4,6-tribromophenol were less than 10% the recovery which indicates poor precision. The detected data was qualified "J-" and the non-detect was qualified "R" to indicate poor precision.

Lab Report 1908D65-003 (NAPIS-2), 1908D65-004 (KA-3), 1908D65-006 (OAPIS-1), 1908D65-007 (DUPLICATE), and 1908D65-008 (West LDU)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R62420). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1908D66-002 (MKTF-10) and 1908D66-004 (DUP-082219-1)

Surrogate recovery for 2-fluorophenol and 2,4,6-tribromophenol were below the lower acceptance limits (Lab Batch ID 47062). The surrogate recovery for 2-fluorophenol and 2,4,6-tribromophenol were less than 10% the recovery which indicates poor precision. The detected data was qualified "J-" and the non-detect was qualified "R" to indicate poor precision.

Lab Report 1908E37-002 (MKTF-31)

Surrogate recovery for DNOP was above the upper acceptance limit (Lab Batch ID 47079). The associated detected field sample result for DRO is qualified "J+" due to a potential high basis.

Lab Report 1908E37-004 (SMW-2) and 1908E37-005 (OW-58)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID B62567). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1908E37-004 (SMW-2)

Surrogate recovery for 2-chlorobiphenyl, phenol-d₅, and 2,4,6-tribromophenol were below the lower acceptance limit (Lab Batch ID 47062). The surrogate recovery for 2-fluorophenol, phenol-d₅, and 2,4,6-tribromophenol were less than 10% the recovery which indicates poor precision. The detected data was qualified "J-" and the non-detect was qualified "R" to indicate poor precision.

Lab Report 1908E39-001 (MKTF-16), 1908E39-002 (MKTF-30), and 1908E39-003 (MKTF-29)

Surrogate recovery for DNOP was above the upper acceptance limit (Lab Batch ID 47079). The associated detected field sample results for DRO were qualified "J+" due to a potential high basis.

Lab Report 1908G89-001 (MKTF-09)

Surrogate recovery for DNOP was above the upper acceptance limit (Lab Batch ID 47191). The associated detected field sample result for DRO is qualified "J+" due to a potential high basis.

Lab Report 1910C12-003 (NAPIS-2), 1910C12-006 (OAPIS-1), and 1910C12-007 (DUPLICATE)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G64059). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1910D02-007 (MKTF-25)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R64171). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1910D49-006 (MKTF-33)

Surrogate recovery for 1,4-dioxane-d₈ was below the lower acceptance limit (Lab Batch ID 191030050). The associated sample was undetected and was qualified "R".

Surrogate recoveries for 2-fluorobiphenyl, 2-fluorophenol, nitrobenzene-d₅, and phenol-d₅ were all below their respective lower acceptance limit (Lab Batch ID 191030050). The associated detected samples were qualified "J-" and those that were not detected were qualified "UJ".

Lab Report 1910E89-005 (MKTF-23)

Surrogate recovery for DNOP was below the lower acceptance limit (Lab Batch ID 48575). The associated detected field sample result for DRO is qualified "J-" due to a potential high basis. The associated field sample for MRO was not detected and was qualified "UJ" due to a potential low bias.

Lab Report 1910E89-007 (MKTF-18) and 1910E89-009 (DUPLICATE)

Surrogate recovery for 1,4-dioxane-d₈ was above the upper acceptance limit (Lab Batch ID 191031048). The associated samples were detected and were qualified "J+".

Lab Report 1910F99-004 (DUPLICATE)

Surrogate recovery for 1,4-dioxane-d₈ was below the lower acceptance limit (Lab Batch ID 191105036). The associated sample was not detected and was qualified "UJ".

Lab Report 1910981-012 (OW-59)

Surrogate recoveries for 2-fluorophenol and 2,4,6-tribromophenol were below the lower acceptance limit (Lab Batch ID 48239). The associated samples there were not detected were qualified "UJ".

Lab Report 1911178-005 (MKTF-39) and 1911178-006 (DUPLICATE)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID R64171). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1911858-003 (OW-64)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G64687). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1911963 (West LDU)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G64687). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Lab Report 1912157-005 (MKTF-50)

Surrogate recovery for BFB was above the upper acceptance limit (Lab Batch ID G64687). The associated detected field sample results for GRO were qualified "J+" due to a potential high bias.

Data qualification for surrogate recovery is shown on Table I-2.

2.6 LCS RECOVERY AND RELATIVE PERCENT DIFFERENCE

LCS/LCS duplicates were performed at the required frequency and were evaluated based on the following criteria:

- If the analyte recovery was above acceptance limits for the LCS or LCS duplicate, but the analyte was not detected in the associated batch, then data qualification was not required.
- If the analyte recovery was above acceptance limits for the LCS or LCS duplicate and the analyte was detected in the associated batch, then the analyte results were qualified "J+" to account for a potential high bias.
- If the analyte recovery was below acceptance limits for LCS or LCS duplicate then the analyte results in the associated analytical batch were qualified ("UJ-" for non-detects and "J-" for detected results) to account for a potential low bias.

LCS/LCSD percent recoveries and relative percent differences (RPDs) were within acceptance limits, with exception to the following:

Lab Report 1903C58 – April 22, 2019

The RPD limits for 18 constituents in the LCS4 (Lab Batch ID 43941) were exceeded and were flagged “S”. None of these constituents were detected in the method blank in Lab Batch ID 43941. No data was qualified.

The %REC for zinc in LCSLL (Lab Batch ID A59060) was below the lower limit and was flagged “S”. The recovery of zinc in the LCS was acceptable. Zinc was not detected in the method blank in Lab Batch ID A59060. No data was qualified.

Lab Report 1903D57 - April 24, 2019

The %REC for 1,4-dichlorobenzene in LCS (Lab Batch ID 44004) was below the lower limit and was flagged “S”. 1,4-dichlorobenzene was not detected in the method blank in Lab Batch ID 44004. No data was qualified.

The %REC for 1,4-dichlorobenzene and 2,4-dinitrotoluene in LCS (Lab Batch ID 44061) were below the lower limit and were flagged “S”. 1,4-dichlorobenzene and 2,4-dinitrotoluene were not detected in the method blank in Lab Batch ID 44061. No data was qualified.

Lab Report 1902313 – February 26, 2019

The %REC for Biochemical Oxygen Demand (BOD) in LCS (Lab Batch ID 43054) was below the lower limit and was flagged “S”. BOD was not detected in the method blank in Lab Batch ID 43054. No data was qualified.

Lab Report 1902322 – February 28, 2019

The %REC for zinc (total) in LCSLL (Lab Batch ID 43165) exceeded the upper limit and was flagged “S”. Zinc was not detected in the method blank in Lab Batch ID 43165. No data was qualified.

Lab Report 1902673 – March 20, 2019

The data for surrogates Nitrobenzene-d5 and 2-Fluorobiphenyl were flagged “S” in the LCS (Lab Batch ID 43262). The %REC were below the lower limit. The surrogates were within acceptable recovery limits in the method blank. No data was qualified.

Lab Report 1902922 – March 20, 2019

The data for surrogates Nitrobenzene-d5 and 2-Fluorobiphenyl were flagged “S” in the LCS (Lab Batch ID 43262). The %REC were below the lower limit. The surrogates were within acceptable recovery limits in the method blank. No data was qualified.

Lab Report 1904008 – June 11, 2019

The %REC for zinc (total) in the LCSLL (Lab Batch ID 44167) exceeded the upper limit and was flagged “S”. Zinc was not detected in the method blank in Lab Batch ID 43165. No data was qualified.

The %REC for 1,4-dichlorobenzene and 2,4-dinitrotoluene in the LCS (Lab Batch ID 44061) were below the lower limit and were flagged “S”. 1,4-dichlorobenzene and 2,4-dinitrotoluene were not detected in the method blank in Lab Batch ID 44061. No data was qualified.

Lab Report 1904535 – May 7, 2019

The %REC for copper (total) in the LCS and LCSLL (Lab Batch ID 44260) exceeded the upper limit and were flagged “S”. Copper was detected in the method blank in Lab Batch ID 44260. The data was qualified “J+”.

The %REC for zinc (total) in the LCSLL (Lab Batch ID 44260) exceeded the upper limit and was flagged “S”. Zinc was detected in the method blank in Lab Batch ID 44260. The data was qualified “J+”.

The %REC for 1,4-dichlorobenzene in the LCS and LCSLL (Lab Batch ID 44353) were below the lower limit and were flagged “S”. 1,4-dichlorobenzene was not detected in the method blank in Lab Batch ID 44353. No data was qualified.

Lab Report 1904D77 – May 22, 2019

The %REC for Biochemical Oxygen Demand (BOD) in the LCS (Lab Batch ID 44652) was below the lower limit and was flagged “S”. BOD was not detected in the method blank in Lab Batch ID 43054. No data was qualified.

Lab Report 1904E06 – May 22, 2019

The %REC for Biochemical Oxygen Demand (BOD) in the LCS (Lab Batch ID 44657) was below the lower limit and was flagged “S”. BOD was not detected in the method blank in Lab Batch ID 43054. No data was qualified.

Lab Report 1905B47 – June 10, 2019

The %REC for iron (total) in the LCSLL (Lab Batch ID 45289) exceeded the upper limit and was flagged “S”. Zinc was not detected in the method blank in Lab Batch ID 45289. The %REC for iron in the LCS was within the acceptable range. The data was not qualified.

Lab Report 1905D86 – June 17, 2019

The %REC for 4 constituents in the LCS (Lab Batch ID 45334) exceeded the upper limit and were flagged “S”. None of these constituents were detected in the method blank in Lab Batch ID 45334. No data was qualified.

The %REC for the surrogate 2,4,6-tribromophenol in the LCS, LCS4, and LCSD4 (Lab Batch 45334) exceeded the upper limit and was flagged “S”. The RPD limits in the other five surrogates were acceptable. No data was qualified.

The %REC for bis(2-chloroisopropyl) ether in the LCS4 and LCSDR (Lab Batch 45334) exceeded the upper limit and was flagged “S”. Bis(2-chloroisopropyl) ether was detected in the method blank in Lab Batch ID 45334. No data was qualified.

Lab Report 1905E66 – June 17, 2019

The %REC for Biochemical Oxygen Demand (BOD) in the LCS (Lab Batch ID 45294) was below the lower limit and was flagged “S”. BOD was not detected in the method blank in Lab Batch ID 43054. No data was qualified.

Lab Report 1905E66 – June 17, 2019

The %REC for Suspended Solids in the LCS (Lab Batch ID 45361) exceeded the upper limit and was flagged “S”. Suspended Solids were not detected in the method blank in Lab Batch ID 43054. No data was qualified.

Lab Report 1906F76 – June 16, 2019

The %REC for boron in the LCSLL (Lab Batch ID 45895) exceeded the upper limit and was flagged “S”. Boron was not detected in the method blank in Lab Batch ID 45895. No data was qualified.

The %RPD for acenaphthene and 1,2,4-trichlorobenzene exceeded the RPD limit in the LCSD (Lab Batch ID 46000) and was flagged “R”. Acenaphthene and 1,2,4-trichlorobenzene were not detected in the method blank in Lab Batch ID 46000. No data was qualified.

Lab Report 1905120 – May 22, 2019

The %REC for zinc in LCSLL (Lab Batch ID 44734) exceeded the upper limit and was flagged “S”. Zinc was not detected in the method blank in Lab Batch ID 44734. No data was qualified.

Lab Report 1905142 – May 22, 2019

The %REC for aluminum (total) in the LCSLL and LCS (Lab Batch ID 44900) exceeded the upper limit and was flagged “S”. Aluminum was detected in the method blank in Lab Batch ID 44900. The data was qualified “J+”.

Lab Report 1905520 – June 5, 2019

The %REC for fluoride in the LCS (Lab Batch ID R59794) exceeded the upper limit and was flagged “S”. Fluoride was not detected in the method blank in Lab Batch ID R59794. No data was qualified.

Lab Report 1905865 – June 5, 2019

The %REC for 8 constituents in the LCS (Lab Batch ID 45061) exceeded the upper limit and were flagged “S”. None of these constituents were detected in the method blank in Lab Batch ID 45334. The %REC for three surrogates in the LCS (Lab Batch ID 45061) exceeded the upper limit and were flagged “S”. The %REC for the three surrogates in the method blank were in the acceptable range. No data was qualified.

Lab Report 1905865 – June 5, 2019

The %REC for fluoride in the LCS (Lab Batch ID R59923) exceeded the upper limit and was flagged “S”. Fluoride was not detected in the method blank in Lab Batch ID R59923. No data was qualified.

The %REC for 8 constituents in the LCS (Lab Batch ID 45061) exceeded the upper limit and were flagged “S”. None of these constituents were detected in the method blank in Lab Batch ID 45334. The %REC for three surrogates in the LCS (Lab Batch ID 45061) exceeded the upper limit and were flagged “S”. The %REC for the three surrogates in the method blank were in the acceptable range. The data was not qualified.

Lab Report 1906248 – Issued June 24, 2019

The %REC for the surrogate DNOP in the LCS (Lab Batch 45448 – analysis date 6/11/19) was below the lower limit and was flagged “S”. The %REC for the surrogate DNOP in the LCS (Lab Batch 45448 – analysis date 6/12/19) was within acceptable limits. The data was not qualified.

The %REC for benzo(g,h,i) perylene and bis(2-chloroispropyl)ether in the LCS4 (Lab Batch ID 45393) exceeded the upper limit and were flagged “S”. Neither of the two constituents were detected in the method blank in Lab Batch ID 45393. The data was not qualified.

The %REC for surrogate 2,4,6-tribromophenol in the LCS4 (Lab Batch ID 45393) exceeded the upper limit and was flagged “S”. The remaining five surrogates were within the acceptable limits. The %REC for the surrogate 2,4,6-tribromophenol in the method blank was within acceptable limits. The data was not qualified.

Lab Report 1908B79 – September 24, 2019

The % REC for 2 constituents in the LCS (Lab Batch ID 46954) exceeded the upper limit and were flagged “S”. Acenaphthene was detected in DUP-20190819-1 and MKTF-19 and were flagged “J+”. 2-Chlorophenol was not detected and did not require qualification.

The %RPD for 4-nitrophenol and pentachlorophenol exceeded their RPD limit and were flagged “RS”. The constituents were not detected in the associated samples and were flagged “UJ”.

Lab Report 1908B82 – September 18, 2019

The %REC for 2 constituents in the LCS (Lab Batch ID 46954) exceeded the upper limit and were flagged “S”. Acenaphthene and 2-chlorophenol were not detected and did not require qualification.

The %RPD for 4-nitrophenol and pentachlorophenol exceeded their RPD limit and were flagged “RS”. The constituents were not detected in the associated samples and were flagged “UJ”.

Lab Report 1908C74 – September 26, 2019

The % REC for phenol in the LCS (Lab Batch 47000) exceeded the upper limit and was flagged “S”. Phenol was not detected and did not require qualification.

The %RPD for several constituents (Lab Batch ID 47000) exceeded the RPD limit and were flagged “RS”. The constituents that were detected were flagged “J+” to indicate high bias and the samples that were not detected in the associated samples and were flagged “UJ”.

Lab Report 1908D36 – September 26, 2019

The %REC for phenol in the LCSD (Lab Batch ID 47000) exceeded the upper limit and was flagged “S”. Phenol was detected in OW-57 and was qualified “J+”.

The %RPD for several constituents (Lab Batch ID 47000) exceeded the RPD limit and were flagged “RS”. The constituents were not detected in the associated samples and were qualified “UJ”.

Lab Report 1908D66 – September 30, 2019

The %REC for 1,2,4-trichlorobenzene in the LCS (Lab Batch ID 47062) exceeded the upper limit and was flagged “S”. 1,2,4-Trichlorobenzene was not detected in the associated samples and did not require qualification.

The %RPD for several constituents (Lab Batch ID 47062) exceeded the RPD limit and were flagged “R”. The constituents were not detected in the associated samples and were qualified “UJ”.

Lab Report 1908E37 – October 1, 2019

The %REC for sodium (dissolved) in the LCSLL (Lab Batch ID A63075) was below the lower limit and was flagged “S”. Sodium (dissolved) was detected in associated samples and were qualified “J-” to indicate a potential low bias.

The %REC for 1,2,4-trichlorobenzene in the LCS (Lab Batch ID 47062) exceeded the upper limit and was flagged “S”. 1,2,4-Trichlorobenzene was not detected in the associated samples and did not require qualification.

The %RPD for several constituents (Lab Batch ID 47062) exceeded the RPD limit and were flagged “R”. The constituents were not detected in the associated samples and were qualified “UJ”.

Lab Report 1908E39 – October 1, 2019

The %REC for sodium (dissolved) in the LCSLL (Lab Batch ID A63075) was below the lower limit and was flagged “S”. Sodium (dissolved) was detected in the associated samples and were qualified “J” to indicate a potential low bias.

Lab Report 1908G22 – September 26, 2019

The %RPD for several constituents (Lab Batch ID 47185) exceeded the RPD limit and were flagged “R”. The constituents were not detected in the associated samples and did not require qualification.

Lab Report 1908G89 – September 26, 2019

The %RPD for several constituents (Lab Batch ID 47185) were above the RPD limit and were flagged “R”. The constituents in the associated samples were qualified “J” if detected and “UJ” if not detected.

Lab Report 1908952 – September 26, 2019

The %REC for acenaphthene and 2-chlorophenol in the LCS (Lab Batch ID 46954) were above the upper REC limit and were flagged “S”. The constituents were not detected in the associated samples and did not require qualification.

The %RPD for 4-nitrophenol and pentachlorophenol (Lab Batch ID 46954) were above the RPD limit and were flagged “RS”. The constituents were not detected in the associated samples and did not require qualification.

Lab Report 1910A53 – December 11, 2019

The %REC for cadmium (total) in the LCSLL (Lab Batch ID 48305) was above the REC limit and was flagged “S”. Cadmium (total) was not detected in the associated samples and did not require qualification.

The %REC for copper (total) in the LCSLL (Lab Batch ID 48305) was below the REC limit and was flagged “S”. Copper (total) was not detected in the associated samples and were qualified “UJ”.

The %REC for aluminum (total) in the LCS (Lab Batch ID A64259) was above the upper REC limit and was flagged “S”. Aluminum (total) was not detected in the associated samples and did not require qualification.

Lab Report 1910E89 – December 23, 2019

The %RPD for phenol and 2-chlorophenol in the LCSD (Lab Batch ID 191031048) were above their respective RPD limits and were flagged “R7”. The associated samples that were detected were qualified “J+” and the associated samples not detected were qualified “UJ”.

Lab Report 1910F99 – December 23, 2019

The %RPD for phenol and 2-chlorophenol in the LCSD (Lab Batch ID 191105036) were above their respective RPD limits and were flagged “R7”. The associated samples that were detected were qualified “J+” and the associated samples not detected were qualified “UJ”.

Lab Report 1911A00 – January 16, 2020

The %REC for phosphorus, orthophosphate (as P) in the LCS (Lab Batch ID R64697) was below the REC limit and was flagged “S”. The constituents were not detected in the associated samples and were qualified “UJ”.

Lab Report 1911A79 – January 16, 2020

The %REC for iron (total) in the LCSLL (Lab Batch ID 49040) was above the REC upper limit and was flagged “S”. The associated detected constituents were qualified “J+”.

Lab Report 1910981 – November 19, 2019

The %REC for molybdenum (total) in the LCSLL (Lab Batch ID A63837) was below the REC lower limit and was flagged “S”. The associated sample, OW-13, was not detected and was qualified “R”.

The %REC for cadmium (total) in the LCSLL (Lab Batch ID 48277) was above the REC upper limit and was flagged “S”. The associated samples were not detected and did not require qualification.

Data qualification for LCS/LCSD percent recoveries and RPDs is shown on Table I-2.

2.7 MS/MSD RECOVERY AND RELATIVE PERCENT DIFFERENCE

MS/MSD samples were performed at the required frequency and were evaluated by the following criteria:

- If the MS or MSD recovery for an analyte was above acceptance limits but the analyte was not detected in the associated analytical batch, then data qualification was not required.
- If the MS or MSD recovery for an analyte was above acceptance limits and the analyte was detected in the associated analytical batch, then analyte results were qualified “J+” to account for a potential high bias.
- Low MS/MSD recoveries for inorganic parameters result in sample qualification of the associated analytical batch with a “J-”.
- Results were not qualified based on non-project specific MS/MSD (i.e., batch QC) recoveries.

Some lab reports do not report MS/MSD results if none of the samples included under that report were used for the MS/MSD; however, in many instances the sample used for the MS/MSD was a sample of similar matrix materials submitted by Marathon in a different data set and its MS/MSD results were included in other lab reports, which are included in this data validation review.

MS/MSD percent recoveries and RPDs were within acceptance limits with exception to the following:

Lab Report 1903C58

The values reported for benzene in the MS/MSD were above the quantitation range. The benzene results for Lab Batch ID WR58813 were qualified “J+”. The data reported for benzene in the MSD was flagged “S”.

Lab Report 1902322-004 (OW-55)

The %REC reported for surrogate BFB in the MS/MSD for GRO was flagged “S” (Lab Batch ID G57625). The %REC for GRO in the MS/MSD were within acceptable limits. No data was qualified.

The %REC reported for phenol in the MS was below the lower limit and was flagged “S” (Lab Batch ID 43051). The %REC for phenol in the MSD was within acceptable limits. No data was qualified.

The %REC reported for surrogate phenol-d₅ in the MS was below the lower limit and was flagged “S” (Lab Batch ID 43051). The %REC for phenol-d₅ in the MSD was within acceptable limits. No data was qualified.

The RPD Limit was exceeded for N-nitrosodi-n-propylamine, 4-nitrophenol and phenol in the MSD and was flagged “R”. Phenol was detected in Lab Batch 1902322-004. The phenol data was qualified “J+”.

Lab Report 1902323-003 (OW-14)

The %REC reported for benzene in the MS/MSD was below the lower limit and were flagged “S” (Lab Batch ID R57586). The values reported for benzene in the MS/MSD were above the quantitation range and were flagged “E”. The benzene data was qualified “J+”.

Lab Report 1904008-004 (MKTF-28)

The %REC reported for 1,4-dichlorobenzene in the MS was below the lower limit and was flagged “S” (Lab Batch ID 43051). The %REC for 1,4-dichlorobenzene in the MSD was within acceptable limits. No data was qualified.

Lab Report 1904535-007 (East LDU)

The %REC reported for surrogate BFB in the MS/MSD for GRO was flagged “S” (Lab Batch ID R59232). The %REC for GRO in the MSD was also flagged “S”. The GRO data for the field sample was qualified “J+”.

Lab Report 1904535-001 (NAPIS-2)

The %REC reported for benzene in the MS/MSD was below the lower limit and were flagged “S” (Lab Batch ID R57586). The benzene data was qualified “J-”.

Lab Report 1904535-001 (OW-14)

The %REC reported for benzene in the MS/MSD exceeded the upper limit and were flagged “S” (Lab Batch ID R59627). The values reported for benzene in the MS/MSD were flagged “E” and “S”. The benzene data was qualified “J+”.

Lab Report 1905520-004 (MKTF-34)

The %REC reported for 4-nitrophenol and pentachlorophenol in the MS/MSD were below the lower limit and were flagged “S” (Lab Batch ID 44966). The concentrations reported for 4-nitrophenol and pentachlorophenol were not detectable. The data was qualified “UJ”.

Lab Report 1905866-005 (MKTF-35)

The %REC reported for GRO in the MSD was below the lower limit and was flagged “S” (Lab Batch ID G60108). The %REC reported for GRO in the MS was within the acceptable limits. The data was not qualified.

Lab Report 1906248-005 (OW-58)

The %REC reported for 2,4-dinitrotoluene in the MS was above the upper limit and was flagged "S" (Lab Batch ID 45493). The %REC for the surrogate 2,4,6-tribromophenol in the MS was above the upper limit and was flagged "S" (Lab Batch ID 45493). The %REC reported for 2,4-dinitrotoluene and 2,4,6-tribromophenol in the MSD were within acceptable limits. The data was not qualified.

The %REC reported for benzoic acid and bis(2-ethylhexyl) phthalate in the MS4 were above the upper limit and were flagged "S" (Lab Batch ID 45493). The %REC for the surrogate 2,4,6-tribromophenol in the MS4 was above the upper limit and was flagged "S" (Lab Batch ID 45493). The %REC reported for benzoic acid in the MSD4 was below the lower limit. The %REC reported for bis(2-ethylhexyl) phthalate in the MSD4 was within acceptable limits. The data was not qualified.

The %RPD for 14 semi-volatile constituents exceeded the RPD limit in the MSD4 (Lab Batch ID 45493) and were as flagged "R". None of the 14 semi-volatile constituents were detected in the sample from OW-58. The data was not qualified.

Lab Report 1908B79-001 (MKTF-35)

The % REC reported for antimony was below the lower limit and exceeded the %RPD and was flagged "RS" (Lab Batch ID 47146). The associated samples was not detected and was "UJ".

Lab Report 1908C74-002 (DUP-082019-1)

The %REC reported for mercury was below the lower limit and was flagged "S" (Lab Batch ID 47375). The associated samples were detected and not detected and were qualified "J-" and "UJ", respectively.

Lab Report 1908D66-002 (MKTF-10)

The %REC reported for aluminum (total) exceeded the upper limit and was flagged "S" (Lab Batch ID 47377). The associated sample was detected and was qualified "J+".

Lab Report 1908G89-002 (PW-3)

The %REC reported for mercury was below the lower limit flagged "S" (Lab Batch ID 47429). The associated sample was detected and was qualified "J-".

Lab Report 1910A53-003A (BW-5B)

The %REC reported for 1,1-dichloroethene was below the lower limit and was flagged "S" (Lab Batch ID R63960). The associated samples that were detected were qualified "J-" and the undetected samples were qualified "UJ".

Lab Report 1910C12-003 (NAPIS-2)

The %REC reported for aluminum (total) in the MS and MSD analysis exceeded the upper REC limit and was flagged "S" (Lab Batch ID 48340). The associated detected samples were qualified "J+".

Lab Report 1910C12-004 (KA-3)

The %REC reported for aluminum (total) in the MS analysis exceeded the upper REC limit and was flagged "S" (Lab Batch ID 48340). The associated detected samples were qualified "J+".

Lab Report 1910C12-005 (NAPIS-3)

The %REC for 1,1-dichloroethene in the MS analysis was below the lower REC limit and was flagged "S" (Lab Batch ID R63993). The associated sample was not detected and was qualified "UJ".

Lab Report 1910E89-006 (MKTF-13)

The %REC reported for GRO was below the lower REC limit and was flagged "S" (Lab Batch ID GR64230). The associated detected samples were qualified "J-" and the undetected samples were qualified "UJ".

Lab Report 1910F99-004 (DUPLICATE)

The %REC for benzene in the MS and MSD analysis were below the lower REC limit and were flagged "ES" (Lab Batch ID R64230). The associated detected samples were qualified "J-" and the undetected samples were qualified "UJ".

The %REC for the MSD analysis for 1,1-dichloroethene and trichloroethene were below the REC limit and were flagged "S" (Lab Batch ID R64230). The associated detected samples were qualified "J-" and the undetected samples were qualified "UJ".

Lab Report 1910F99 (MKT-4)

The %REC reported for GRO was below the REC lower limit and was flagged "S" (Lab Batch ID G64230). The associated detected samples were qualified "J-".

Lab Report 1910981-010 (OW-60)

The %REC reported for barium (total) and manganese (total) were below the REC lower limit and were flagged "S" (Lab Batch ID 48277). The associated detected samples were qualified "J-".

The %REC reported for antimony (total) was below the REC lower limit and was flagged "S" (Lab Batch ID 48277). The associated samples were undetected and were qualified "UJ".

Lab Report 191911178-003 (MKT-20)

The %REC reported for selenium (total) for the MS was below the REC lower limit and was flagged "S" (Lab Batch ID 48793). The associated detected samples were qualified "J-" and the undetected samples were qualified "UJ".

The %REC for benzene for the MSD was below the REC lower limit and was flagged "S" (Lab Batch ID R64499). The associated detected samples were qualified "J-".

Lab Report 1911858-003 (OW-64)

The %REC for GRO for the MS and MSD were above the REC upper limit and was flagged "S" (Lab Batch ID G64687). The associated samples were qualified "J+".

Lab Report 1912157-001 (MKTF-46)

The %REC for iron (total) for the MS and MSD were above the REC upper limit and were flagged "S" (Lab Batch ID 49175). The associated detected samples were qualified "J+".

Lab Report 1912157-004 (MKTF-49)

The %REC for antimony (total) for the MSL was below the REC lower limit and was flagged "S" (Lab Batch ID 49175). The associated detected samples were qualified "J-" and the undetected samples were qualified "UJ".

2.8 DUPLICATES

2.8.1 Field Duplicates

Field duplicates were collected at a rate as stated in the Order and Permit. The RPDs between the field duplicate and its associated sample were calculated and are presented in Table I-3. The field duplicates were evaluated by the following criteria:

Marathon Petroleum Company
Gallup Refinery

Annual Ground Water Monitoring Report - 2019

- If an analyte was detected at a concentration greater than five times the method reporting limit, the RPD should be less than 25 percent for ground water samples.
- If an analyte was detected at a concentration that is less than five times the method reporting limit, then the difference between the sample and the field duplicate should not exceed the method reporting limit.
- Duplicate RPDs are calculated by dividing the difference of the concentrations by the average of the concentrations.

Field duplicate RPDs were within acceptance limits except for those summarized in Table I-4.

3.0 COMPLETENESS SUMMARY

The following equation was used to calculate the technical completeness:

$$\% \text{ Technical Completeness} = \left(\frac{\text{Number of usable results}}{\text{Number of reported results}} \right) \times 100$$

The technical completeness attained for Annual and Semi-Annual monitoring activities conducted in 2019 was 100 percent for all parameters with the exception of the following parameters. Orthophosphate (as P) was qualified “R” (unusable) for several sample locations due to outside of holding time in Table I-2. The percent technical compliance for Orthophosphate (as P) is 98.0. SVOC data from Samples MKTF-10, MKTF-17, MKTF-21, OW-59, SMW-2, and DUP-082219-1 were qualified “R” (unusable) in Table I-2. The percent technical compliance for SVOC’s is 98.9. Total Metals data from Sample OW-13 (Lab Report 1910981-003/Lab Batch ID A63837/4th Quarter) was qualified “R” (unusable) in Table I-2. The percent technical compliance for Total Metals is 99.99.

The completeness results are provided in Table I-5. The analytical results for the required analytes per the Permit were considered usable for the intended purposes and the project DQOs have been met.

Notes:

RPD = Relative percent difference; $[(\text{difference})/(\text{average})] * 100$

NC = Not calculated; RPD values were not calculated for non-detects or J-flagged data

ug/L = micrograms per liter

mg/L = milligrams per liter -- = not analyzed

Bolded results are equal to or greater than the RPD of 25.

36.4

Notes:

RPD = Relative percent difference; [(difference)/(average)]* 100

NC = Not calculated; RPD values were not calculated for non-detects or J-flagged data

ug/L = micrograms per liter

mg/L = milligrams per liter

--- = not analyzed

Bolded results are equal to or greater than the RPD of 25.

Notes:

RPD = Relative percent difference; [(difference)/(average)]* 100

NC = Not calculated; RPD values were not calculated for non-detects or J-flagged data

ug/L = micrograms per liter

mg/L = milligrams per liter

--- = not analyzed

Bolded results are equal to or greater than the RPD of 25.

1. Safety

1.1 General Information

Read all safety information in this manual carefully before using the YSI 556 Multi-Probe System (MPS). Reagents that are used to calibrate and check this instrument may be hazardous to your health. Take a moment to review Appendix D Health and Safety.

WARNING

Warnings are used in this manual when misuse of the instrument could result in death or serious injury to a person.

CAUTION

Cautions are used in this manual when misuse of the instrument could result in mild or serious injury to a person and/or damage to equipment.

IMPORTANT SAFETY INSTRUCTIONS!

SAVE THESE INSTRUCTIONS!

 In essence, the most important safety rule for use of the YSI 556 MPS is to utilize the instrument **ONLY** for purposes documented in this manual. This is particularly true of the YSI 6117 rechargeable battery pack that contains nickel metal hydride (NiMH) batteries. The user should be certain to read all of the safety precautions outlined below before using the instrument.

Batteries

 This instrument is powered by alkaline or optional nickel-metal hydride batteries, which the user must remove and dispose of when the batteries no longer power the instrument. Disposal requirements vary by country and region, and users are expected to understand and follow the battery disposal requirements for their specific locale.

The circuit board in this instrument contains a manganese dioxide lithium "coin cell" battery that must be in place for continuity of power to memory devices on the board. This battery is not user serviceable or replaceable.

When appropriate, an authorized YSI service center will remove this battery and properly dispose of it, per service and repair policies.

YSI Rechargeable Battery Pack Safety Information

Restrictions on Usage

1. Never dispose of the battery pack in a fire.
2. Do not attempt to disassemble the YSI 6117 battery pack
3. Do not tamper with any of the electronic components or the batteries within the battery pack. Tampering with either the electronic circuitry or the batteries will result in the voiding of the warranty and the compromising of the system performance, but, more importantly, can cause safety hazards which result from overcharging such as overheating, venting of gas, and loss of corrosive electrolyte.
4. Do not charge the battery pack outside the 0–40°C temperature range.
5. Do not use or store the battery at high temperature, such as in strong direct sunlight, in cars during hot weather, or directly in front of heaters.
6. Do not expose the battery pack to water or allow the terminals to become damp.
7. Avoid striking or dropping the battery pack. If the pack appears to have sustained damage from these actions or malfunctions after an impact or drop, the user should not attempt to repair the unit. Instead, contact YSI Customer Service. Refer to *Appendix E Customer Service*.
8. If the battery pack is removed from the YSI 556 MPS, do not store it in pockets or packaging where metallic objects such as keys can short between the positive and negative terminals.

Precautions for Users with Small Children.

Keep the battery pack out of reach of babies and small children.

Danger Notifications – Misuse creates a STRONG possibility of death or serious injury.

FAILURE TO CAREFULLY OBSERVE THE FOLLOWING PROCEDURES AND PRECAUTIONS CAN RESULT IN LEAKAGE OF BATTERY FLUID, HEAT GENERATION, BURSTING, AND SERIOUS PERSONAL INJURY.

1. Never dispose of the battery pack in a fire or in heat.
2. Never allow the positive and negative terminals of the battery pack to become shorted or connected with electrically conductive materials. When the battery pack has been removed from the YSI 556 MPS, store it in a heavy plastic bag to prevent accidental shorting of the terminals.
3. Never disassemble the battery pack and do not tamper with any of the electronic components or the batteries within the battery pack. The battery pack is equipped with a variety of safety features. Accidental deactivation of any of these safety features can cause a serious hazard to the user.
4. The NiMH batteries in the battery pack contain a strong alkaline solution (electrolyte). The alkaline solution is extremely corrosive and will cause damage to skin or other tissues. If any fluid from the battery pack comes in contact with a user's eyes, immediately flush with clean water and consult a physician immediately. The alkaline solution can damage eyes and lead to permanent loss of eyesight.

Warning Notifications – Misuse creates a possibility of death or serious injury

1. Do not allow the battery pack to contact freshwater, seawater, or other oxidizing reagents that might cause rust and result in heat generation. If a battery becomes rusted, the gas release vent may no longer operate and this failure can result in bursting.
2. If electrolyte from the battery pack contacts the skin or clothing, thoroughly wash the area immediately with clean water. The battery fluid can irritate the skin.

Caution Notifications – Misuse creates a possibility of mild or serious injury or damage to the equipment.

1. Do not strike or drop the battery pack. If any impact damage to the battery pack is suspected, contact YSI Customer Service. Refer to *Appendix E Customer Service*.

2. Store the battery pack out of reach of babies and small children.
3. Store the battery pack between the temperatures of -20 and 30°C.
4. Before using the battery pack, be sure to read the operation manual and all precautions carefully. Then store this information carefully to use as a reference when the need arises.

YSI 616 Cigarette Lighter Charger Safety Information

1. This section contains important safety and operating instructions for the YSI 556 MPS cigarette lighter battery charger (YSI 616; RadioShack Number 270-1533E). **BE SURE TO SAVE THESE INSTRUCTIONS.**
2. Before using the YSI 616 cigarette lighter charger, read all instructions and cautionary markings on battery charger, battery pack, and YSI 556 MPS.
3. Charge the YSI 6117 battery pack with the YSI 616 cigarette lighter charger **ONLY** when the YSI 6117 is installed in the YSI 556 MPS.
4. Do not expose charger to rain, moisture, or snow.
5. Use of an attachment not recommended or sold by the battery charger manufacturer may result in a risk of fire, electric shock, or injury to persons.
6. To reduce risk of damage to cigarette lighter and cord, pull by cigarette lighter rather than cord when disconnecting charger.
7. Make sure that the cord is located so that it will not be stepped on, tripped over, or otherwise subjected to damage or stress.
8. Do not operate charger with damaged cord or cigarette lighter connector – replace it immediately.
9. Do not operate charger if it has received a sharp blow, been dropped, or otherwise damaged in any way; contact YSI Customer Service. Refer to *Appendix E Customer Service*.
10. Do not disassemble charger other than to change the fuse as instructed. Replace the part or send it to YSI Product Service if repair is required (refer to *Appendix E Customer Service*). Incorrect reassembly may result in a risk of electric shock or fire.

11. To reduce risk of electric shock, unplug charger before attempting any maintenance or cleaning. Turning off controls will not reduce this risk.

YSI 556 MPS Water Leakage Safety Information

The YSI 556 MPS has been tested and shown to comply with IP67 criterion, i.e. submersion in 1 meter of water for 30 minutes with no leakage into either the battery compartment or the main case. However, if the instrument is submersed for periods of time in excess of 30 minutes, leakage may occur with subsequent damage to the batteries, the rechargeable battery pack circuitry, and/or the electronics in the main case.

If leakage into the battery compartment is observed when using alkaline C cells, remove batteries, dispose of batteries properly, and dry the battery compartment completely, ideally using compressed air. If corrosion is present on the battery terminals, contact YSI Customer Service for instructions. Refer to *Appendix E Customer Service*.

If leakage into the battery compartment is observed when using the YSI rechargeable battery pack, remove the battery assembly and set aside to dry. Return the battery pack to YSI Product Service for evaluation of possible damage. Finally dry the battery compartment completely, ideally using compressed air. If corrosion is present on the battery terminals, contact YSI Customer Service for instructions. Refer to *Appendix E Customer Service*.

 **CAUTION:** If water has contacted the rechargeable battery pack, do not attempt to reuse it until it has been evaluated by YSI Product Service (refer to Appendix E Customer Service). Failure to follow this precaution can result in serious injury to the user.

If it is suspected that leakage into the main cavity of the case has occurred, remove the batteries immediately and return the instrument to YSI Product Service for damage assessment. Refer to *Appendix E Customer Service*.

 **CAUTION:** Under no circumstances should the user attempt to open the main case.

2. General Information

2.1 Description

The rugged and reliable YSI 556 MPS (Multi-Probe System) combines the versatility of an easy-to-use, easy-to-read handheld unit with all the functionality of a multi-parameter system. Featuring a waterproof, impact-resistant case, the YSI 556 MPS simultaneously measures dissolved oxygen, conductivity, temperature, and optional pH and ORP. A simple cellular phone style keypad and large display make the instrument easy to use. The YSI 556 MPS is compatible with YSI EcoWatchTM for WindowsTM software.

The YSI 556 MPS assists the user in conforming to Good Laboratory Practice (GLP) standards which help ensure that quality control/quality assurance methods are followed. Battery life is displayed with a fuel gauge, and the user can choose standard alkaline batteries or an optional rechargeable battery pack.

The 1.5 MB memory can store more than 49,000 data sets. Other options include a flow cell and barometer. The internal barometer can be user-calibrated and displayed along with other data, used in dissolved oxygen calibrations, and logged to memory for tracking changes in barometric pressure.

Features

- Waterproof -meets IP67 specifications
- Field-replaceable DO electrode module; pH and pH/ORP sensors
- Compatible with EcoWatchTM for WindowsTM data analysis software
- Assists with Good Laboratory Practice Standards (GLP)
- Choice of DO membrane material for different applications
- Easy-to-use, screw-on cap DO membranes
- User-upgradeable software from YSI website
- Three-year warranty on the instrument; one-year on the probe modules
- Available with 4,10, and 20 m cable lengths
- Stores over 49,000 data sets, time and date stamped

- Auto temperature compensating display contrast
- Optional barometer
- Optional rechargeable battery pack or standard alkaline batteries

2.2 Unpacking the Instrument

1. Remove the instrument from the shipping box. Note that the probe module and sensors are shipped in a separate box and will be unpacked later in Section 3.2 *Unpacking the Probe Module*

NOTE: Do not discard any parts of supplies.

2. Use the packing list to ensure all items are present.
3. Visually inspect all components for damage.

NOTE: If any parts are missing or damaged, contact your YSI Service Center immediately. Refer to Appendix E Customer Service or www.ysi.com.

2.3 Features of the YSI 556 Multi-Probe System

Figure 2.1 Front View of YSI 556 MPS

Figure 2.2 Back View of YSI 556 MPS

2.4 Batteries

2.4.1 Battery Life

Standard Alkaline Batteries

With the standard battery configuration of 4 alkaline C cells, the YSI 556 MPS will operate continuously for approximately 180 hours. Assuming a standard usage pattern when sampling of 3 hours of “on time” in a typical day, the alkaline cells will last approximately 60 days.

Optional Rechargeable Battery Pack

When fully charged, the optional rechargeable battery pack will provide approximately 50 hours of battery life.

2.4.2 Inserting 4 C Batteries

Figure 2.1 Inserting C Cells

CAUTION: Install batteries properly to avoid damage to the instrument.

1. Loosen the four screws in the battery lid on the back of the instrument using any screwdriver.
2. Remove the battery lid.
3. Insert four C batteries between the clips following the polarity (+ and -) labels on the bottom of the battery compartment.
4. Check gasket for proper placement on the battery lid.
5. Replace the battery lid and tighten the 4 screws securely and evenly.

NOTE: Do not over-tighten the screws.

2.4.3 Inserting Optional Rechargeable Battery Pack

Figure 2.2 Inserting Battery Pack

⚠ CAUTION: Read all cautions and warning that come with the battery pack before using the battery pack.

1. Loosen the four screws in the battery lid on the back of the instrument using any screwdriver.
2. Remove the C battery lid and store for future use. Remove C batteries, if installed.
3. Install the rechargeable battery pack and lid and tighten the 4 screws securely and evenly.

NOTE: Do not over tighten the screws.

2.4.4 Charging the Optional Rechargeable Battery Pack

Figure 2.3 Charging the Battery Pack

⚠ CAUTION: Do not use or store the battery pack at extreme temperatures such as in strong direct sunlight, in cars during hot weather or close to heaters.

1. Install the rechargeable battery pack into the instrument as described in Section 2.4.3 *Inserting Optional Rechargeable Battery Pack*.
2. Attach the charger adapter cable (YSI 6119) to the instrument.

NOTE: Wall power supplies for use in countries outside the US and Canada can be found in *Appendix B Instrument Accessories*.

3. Insert the barrel connector of the wall power supply into the barrel of the adapter cable.

⚠ CAUTION: Do not charge the battery pack continuously for more than 48 hours.

⚠ CAUTION: Do not drop or expose to water.

⚠ CAUTION: Do no charge the battery pack at temperatures below 0°C or above 40°C.

4. Plug the wall power supply into an AC power outlet for approximately 2 hours to obtain an 80% to 90% charge for 6 hours to get a full charge.

NOTE: The battery pack can be recharged whether the instrument is on or off.

2.4.5 Storing the Battery Pack

Remove the battery pack from the instrument when the instrument will not be used for extended periods of time to prevent over discharge of the battery pack.

Store the battery pack in a heavy plastic bag to prevent accidental shorting of the terminals. Store between -20 and 30°C .

2.4.6 Optional Cigarette Lighter Charger

 **CAUTION: Read all warnings and cautions that come with the charger before using the charger.**

 **CAUTION: Only use cigarette lighter charger when rechargeable battery pack is inserted into instrument.**

 **CAUTION: Do not mishandle cigarette lighter charger. Do not expose to moisture.**

1. Plug the barrel connector of the cigarette lighter charger into the mating end of the YSI 6119 Charger Adapter Cable.
2. Attach the MS-19 end of the YSI 6119 Charger Adapter Cable to the instrument.
3. Make one of the following modifications to the other end of the charger:

Slide the adapter ring off the plug to use the device with an American or Japanese vehicle.

American and Japanese Vehicles

Figure 2.1 Charger Plug Adapter Use

Leave the adapter ring on the plug and position it so that the slots on the adapter ring line up with the plug's spring clips to use the device on a European vehicle.

European Vehicles

Figure 2.2 European Charger Plug Adapter Use

NOTE: If the charger stops working properly, refer to Section 13 *Troubleshooting*.

2.5 Power On

Press and release the on/off button in the upper left corner of the instrument keypad to turn the instrument on or off. See Figure 2.1 Front View of YSI 556 MPS.

2.6 Setting Display Contrast

The display contrast automatically compensates for temperature changes. However, under extreme temperature conditions you may wish to optimize the display by manual adjustment as follows:

1. Press and *hold down* the backlight key in the upper right corner of the keypad and press the “up” arrow to increase (darken) the contrast.
2. Press and *hold down* the backlight key in the upper right corner of the keypad and press the “down” arrow to decrease (lighten) the contrast.

2.7 Backlight

Press and *release* the backlight key in the upper right corner of the keypad to turn the backlight on or off. See Figure 2.1 Front View of YSI 556 MPS.

NOTE: The backlight turns off automatically after two minutes of non-use.

0	0

Figure 2.6 Keypad Features

1. See Figure 2.10 Keypad Letters & Numbers and press the appropriate key repeatedly until letter or number desired appears in display.

NOTE: Press the key repeatedly in rapid succession to get to the desired letter or number. If you pause for more than a second, the cursor automatically scrolls to the right to prepare for the next input.

EXAMPLE 1: Press the **6** key *once* and *release* to display an uppercase “M”.

EXAMPLE 2: Press the **6** key *four times* and *release* to display the number “6”.

EXAMPLE 3: Press the **6** key *five times* and *stop* to display a lowercase “m”.

2. Press the left arrow key to go back and reenter a number or setter that needs to be changed.

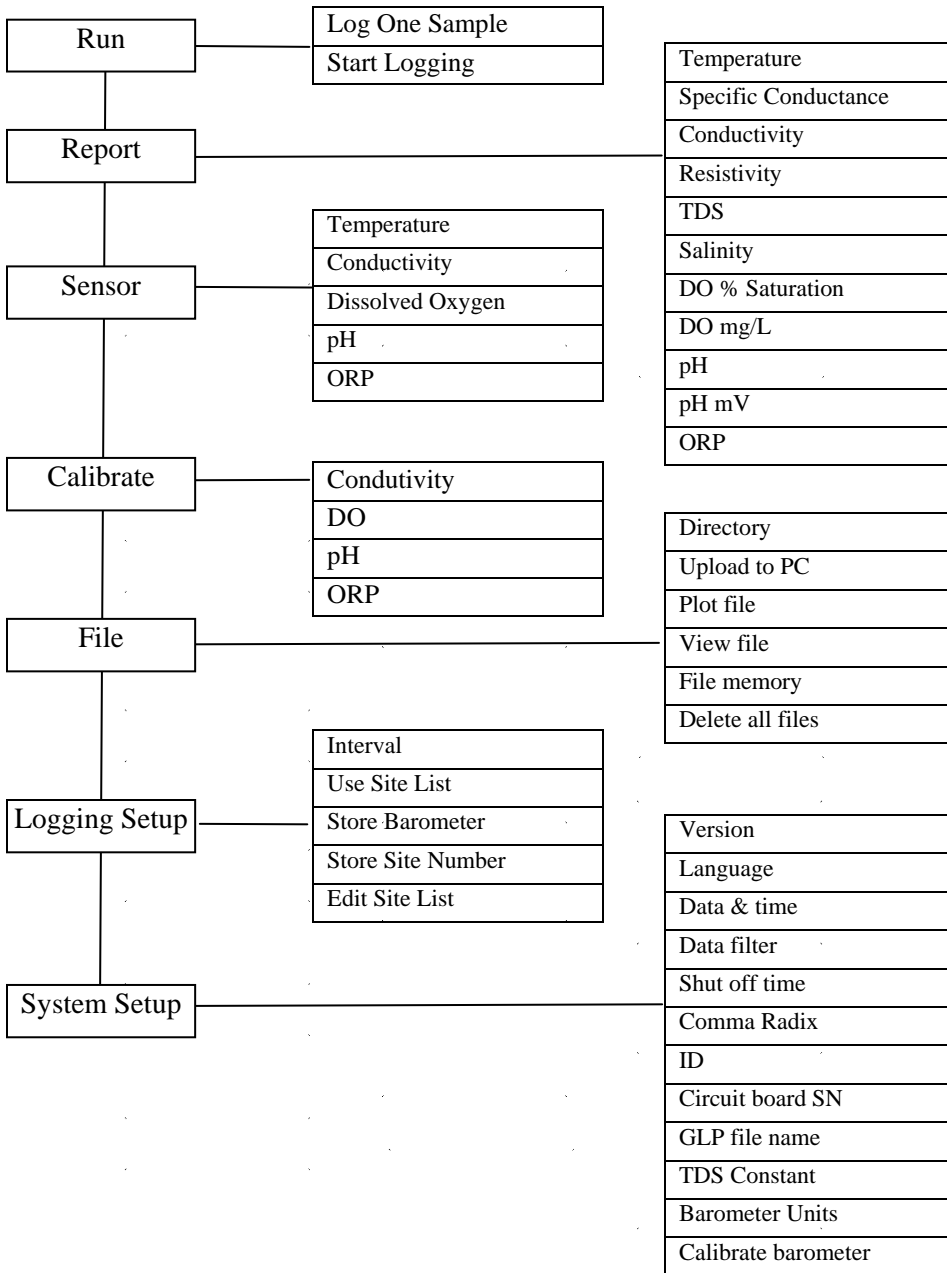

Press the **Enter** key when your entry is complete.

NOTE: The instrument software permits only numeric entries in many instances, such as when setting the clock or entering calibration parameters.

2.10 Instrument Reset

The YSI 556 MPS is characterized by sophisticated software that should provide trouble-free operation. However, as with all high-capability software packages, it is always possible that the user will encounter circumstances in which the instrument does not respond to keypad entry. If this occurs, the instrument function can easily be restored by removing and then reapplying battery power. Simply remove either your C-cells or rechargeable battery pack from the battery compartment, wait 30 seconds and then replace the batteries. See Section 2.4 *Batteries* for battery removal/reinstallation instructions.

2.11 Menu Flowchart

3. Probe Module

3.1 Introduction

The YSI 5563 Probe module is used for measuring dissolved oxygen, temperature, conductivity, and optional pH and ORP. The probe module is rugged, with the sensors enclosed in a heavy duty probe sensor guard with attached sinking weight. A 4, 10 or 20 meter cable is directly connected to the probe module body making it waterproof. An MS-19 connector at the end of the cable makes the YSI 5563 fully compatible with the YSI 556 Multi-Probe System.

3.2 Unpacking the Probe Module

1. Remove the YSI 5563 Probe Module from the shipping boxes.

NOTE: Do not discard any parts or supplies.

2. Use the packing list to ensure all items are present.
3. Visually inspect all components for damage.

NOTE: If any parts are missing or damaged, contact a YSI representative immediately. Refer to: *Appendix E Customer Service* or visit www.ysi.com.

3.3 Features of the YSI 5563 Probe Module

Figure 3.1 Probe Module

3.4 Preparing the Probe Module

To prepare the probe module for calibration and operation, you need to install the sensors into the connectors on the probe module bulkhead. In addition to sensor installation, you need to install a new DO membrane cap.

3.4.1 Sensor Installation

Whenever you install, remove or replace a sensor, it is extremely important that the entire probe module and all sensors be thoroughly dried prior to the removal of a sensor or a sensor port plug. This will prevent water from entering the port. Once you remove a sensor or plug, examine the connector inside the probe module sensor port. If any moisture is present, use compressed air to completely dry the connector. If the connector is corroded, return the probe module to your YSI Distributor or directly to YSI Customer Service. Refer to *Appendix E Customer Service*.

Conductivity/Temperature and pH, pH/ORP Sensor Installation

1. Unscrew and remove the probe sensor guard.
2. Using the sensor installation tool supplied in the YSI 5511 maintenance kit, unscrew and remove the sensor port plugs.

Figure 3.2 Port Plug Removal

3. Locate the port with the connector that corresponds to the sensor that is to be installed.

Figure 3.3 Sensor Port Identification

4. Apply a thin coat of o-ring lubricant (supplied in the YSI 5511 maintenance kit) to the o-rings on the connector side of the sensor (see Figure 3.4 O-ring Lubrication).

Figure 3.4 O-ring Lubrication

⚠ CAUTION: Make sure that there are NO contaminants between the o-ring and the sensor. Contaminants that are present under the o-ring may cause the o-ring to leak.

5. Be sure the probe module sensor port is free of moisture and then insert the sensor into the correct port. Gently rotate the sensor until the two connectors align.
6. With the connectors aligned, screw down the sensor nut using the sensor installation tool.

Figure 3.5 Sensor Installation

⚠ CAUTION: Do not cross thread the sensor nut. Tighten the nut until it is flush with the face of the probe module bulkhead. Do not over tighten.

Figure 3.6 Bulkhead Seating

7. Repeat steps 3-6 for any other sensors.

8. Replace the probe sensor guard.

Dissolved Oxygen Sensor Installation

The YSI 5563 comes with the DO sensor already installed. Refer to Section *11.1.2 DO Sensor Replacement* for instructions on installing the YSI 559 Replaceable DO Module Kit.

3.4.2 Membrane Cap Selection

The YSI 5563 is shipped with a YSI 5909 kit that contains membrane caps made with 2 mil polyethylene (PE), a material which should be ideal for most field applications of the 556. However, YSI also offers membrane caps made with two other materials (1 mil polyethylene and 1 mil Teflon) which some users may also prefer. All membranes available for the 556/5563 system provide comparable accuracy if used properly. The difference between the two thicknesses of PE is found in the trade-off of flow dependence and response time as described below. Teflon is offered because some users may prefer to continue using the traditional membrane material used by YSI. To avoid confusion, the membrane caps are color coded as described below and can be ordered in kits as noted:

1 mil Teflon – Black Caps (Kit = YSI 5906)

1 mil Polyethylene (PE) – Yellow Caps (Kit = YSI 5908)

2 mil Polyethylene (PE) – Blue Caps (Kit = YSI 5909)

The 1 mil Teflon caps will offer traditional, reliable performance for most dissolved oxygen applications. The 1 mil PE caps will provide a significantly faster dissolved oxygen response (as long as your 556 Data Filter is set correctly as described below in Sections 10.2 and 10.3.1) while also giving readings which are significantly less flow dependent than the 1 mil Teflon caps. Finally, 2 mil PE caps will show a large reduction in flow dependence over 1 mil Teflon while not significantly increasing the response time. Generally, one of the PE caps is likely to provide better performance for your application.

IMPORTANT: No matter which type of membrane cap you select, you will have to confirm your selection in the 556 software from the Sensor menu as described in Section *4 Sensors*.

3.4.3 Membrane Cap Installation

NOTE: The YSI 5563 DO sensor (already installed in the probe module) was shipped dry. A shipping membrane was installed to protect the electrode. **A new membrane cap must be installed before the first use.**

1. Unscrew and remove the probe sensor guard.
2. Unscrew, remove, and discard the old membrane cap.
3. Thoroughly rinse the sensor tip with distilled water.
4. Prepare the electrolyte according to the directions on the electrolyte solution bottle.
5. Hold the new membrane cap and fill it at least ½ full with the electrolyte solution.
6. Screw the membrane cap onto the sensor moderately tight. A small amount of electrolyte should overflow.

Caution: Do not touch the membrane surface.

7. Screw the probe sensor guard on moderately tight.

3.5 Transport/Calibration Cup

The YSI 5563 Probe module has been supplied with a convenient transport/calibration cup. This cup is an ideal container for calibration of the different sensors, minimizing the amount of solution needed. Refer to Section 6 *Calibrate*.

3.5.1 Transport/Calibration Cup Installation

1. Remove probe sensor guard, if already installed.
2. Ensure that an o-ring is installed in the o-ring groove on the threaded end of the probe module body.
3. Screw the transport/calibration cup on the threaded end of the probe module and securely tighten.

NOTE: Do not over tighten as this could cause damage to the threaded portions.

Figure 3.7 Transport/Calibration Cup Installation

3.6 Instrument/Cable Connection

Attach the cable to the instrument as follows:

1. Line up the pins and guides on the cable with the holes and indentations on the cable connector at the bottom of the YSI 556 instrument. See Figure 2.1 Front View of YSI 556 MPS.
2. Holding the cable firmly against the cable connector, turn the locking mechanism clockwise until it snaps into place.

Remove the cable from the instrument by turning the cable connector counterclockwise until the cable disengages from the instrument.

4. Sensors

The Sensors screen allows the user to enable or disable each of the sensors and select which membrane material will be used for the dissolved oxygen sensor. Disabled sensors will not be displayed on the screen in real time or logged to files.

1. Press the **On/off** key to display the run screen.
2. Press the **Escape** key to display the main menu screen.

Figure 4.1 Main Menu Screen

3. Use the arrow keys to highlight the **Sensor** selection.
4. Press the **Enter** key to display the sensors enabled screen.

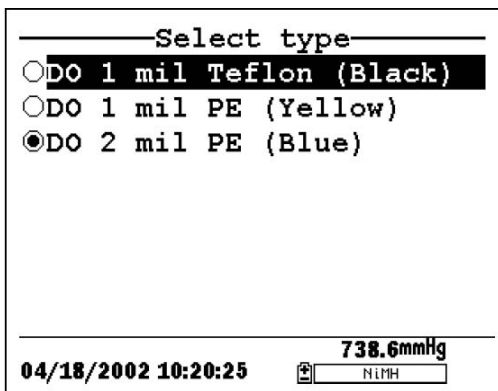

Figure 4.2 Sensors Enabled Screen Before DO Membrane Selection

A black dot to the left of a sensor indicates that sensor is enabled. Sensors with an empty circle are disabled.

Highlight the “DO None” entry as shown above and press **Enter** to display the membrane choice screen. Consult Section 3.4.2 *Membrane Cap Selection* for information on the advantages of each type of membrane material. Blue membrane caps using 2 mil polyethylene (PE) were shipped with your YSI 5563 and are likely to be the best choice for most 556 field applications.

**Figure 4.3 Membrane Selection Screen**

Highlight the desired membrane choice – in this case, 2 mil PE - and press Enter to activate your selection with a dot to the left of the screen. Then press **Escape** to return to the Sensor menu that now shows your DO membrane selection.

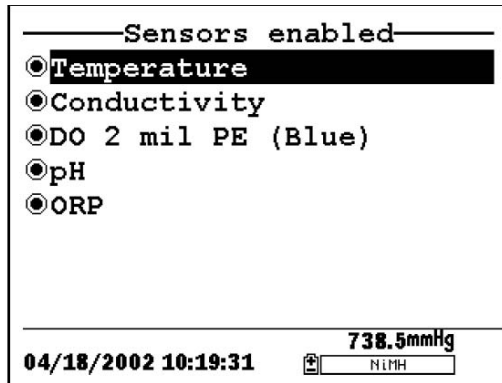

Figure 4.4 Sensors Enabled Screen After DO Membrane Selection

NOTE: The Temperature sensor cannot be disabled. Most other sensors require temperature compensation for accurate readings. In addition, the conductivity sensor must be activated in order to obtain accurate dissolved oxygen mg/L readings.

5. Use the arrow keys to highlight the sensor you want to change, then press the Enter key to enable or disable it.
6. Repeat step 5 for each sensor you want to change.
7. Press the Escape key to return to the main menu screen.

5. Report

The Report Setup screen allows the user to select which sample parameters and units the YSI 556 MPS will display on the screen. It does NOT determine which parameters are logged to memory. Refer to Section 4 *Sensors*.

1. Press the **On/off** key to display the run screen.
2. Press the **Escape** key to display the main menu screen.

Figure 5.1 Main Menu

3. Use the arrow keys to highlight the **Report** selection.
4. Press the **Enter** key to display the report setup screen.

Figure 5.2 Report Setup Screen

NOTE: A black dot to the left of a parameter indicates that parameter is selected for display. Parameters with an empty circle will not be displayed.

NOTE: You may have to scroll down past the bottom of the screen to see all the parameters.

5. Use the arrow keys to highlight the parameter you want to change, then press the **Enter** key. If you can't find the parameter you want, even after scrolling down past the bottom of the screen, the sensor used for that parameter is disabled. Refer to Section 4 *Sensors*.
6. If you selected Temperature, Specific Conductivity, Conductivity, Resistance or Total Dissolved Solids, the Units screen will appear.

—————Select units—————

NONE

Temp C

Temp F

Temp K

01/20/2001 13:40:55 736.4mmHg

Figure 5.3 Units Screen

7. Use the arrow keys to select the units desired, then press the **Enter** key to return to the report setup screen.
8. Repeat steps 5 and 6 for each parameter you want to change.

NOTE: Specific Conductance (temperature compensated conductivity) is notated on the Run screen with a small 'c' after the units of measure.

All parameters may be enabled at the same time.

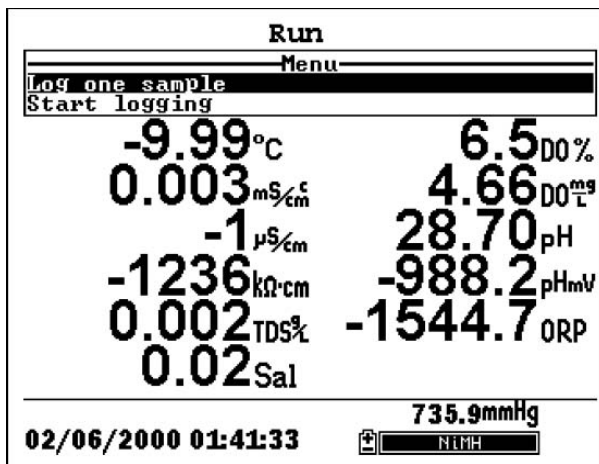

Figure 5.4 All Parameters Displayed

9. Press the **Escape** key to return to the Main menu screen.

6. Calibrate

All of the sensors, except temperature, require periodic calibration to assure high performance. You will find specific calibration procedures for all sensors that require calibration in the following sections. If a sensor listed is not installed in your probe module, skip that section and proceed to the next sensor until the calibration is complete.

 **CAUTION:** Reagents that are used to calibrate and check this instrument may be hazardous to your health. Take a moment to review *Appendix D Health and Safety*. Some calibration standard solutions may require special handling.

6.1 Getting Ready to Calibrate

6.1.1 Containers Needed to Calibrate the Probe Module

The transport/calibration cup that comes with your probe module serves as a calibration chamber for all calibrations and minimizes the volume of calibration reagents required.

Instead of the transport/calibration cup, you may use laboratory glassware to perform calibrations. If you do not use the transport/calibration cup that is designed for the probe module, you are cautioned to do the following:

- ✓ Perform all calibrations with the Probe Sensor Guard installed. This protects the sensors from possible physical damage.
- ✓ Use a ring stand and clamp to secure the probe module body to prevent the module from falling over. Most laboratory glassware has convex bottoms.
- ✓ Ensure that all sensors are immersed in calibration solutions. Many of the calibrations factor in readings from other sensors (e.g., temperature sensor). The top vent hole of the conductivity sensor must also be immersed during some calibrations.

6.1.2 Calibration Tips

1. If you use the Transport/Calibration Cup for dissolved oxygen (DO) calibration, make certain to loosen the seal to allow pressure equilibration before calibration. The DO calibration is a water-saturated air calibration.
2. When calibrating pH, always calibrate with buffer 7 first, regardless if performing a 1, 2, or 3 point calibration
3. The key to successful calibration is to ensure that the sensors are completely submersed when calibration values are entered. Use recommended volumes when performing calibrations.
4. For maximum accuracy, use a small amount of previously used calibration solution to pre-rinse the probe module. You may wish to save old calibration standards for this purpose.
5. Fill a bucket with ambient temperature water to rinse the probe module between calibration solutions.
6. Have several clean, absorbent paper towels or cotton cloths available to dry the probe module between rinses and calibration solutions. Shake the excess rinse water off of the probe module, especially when the probe sensor guard is installed. Dry off the outside of the probe module and probe sensor guard. Making sure that the probe module is dry reduces carry-over contamination of calibrator solutions and increases the accuracy of the calibration.
7. If you are using laboratory glassware for calibration, you do not need to remove the probe sensor guard to rinse and dry the sensors between calibration solutions. The inaccuracy resulting from simply rinsing the sensor compartment and drying the outside of the guard is minimal.
8. If you are using laboratory glassware, remove the stainless steel weight from the bottom of the probe sensor guard by turning the weight counterclockwise. When the weight is removed, the calibration solutions have access to the sensors

without displacing a lot of fluid. This also reduces the amount of liquid that is carried between calibrations.

9. Make certain that port plugs are installed in all ports where sensors are not installed. It is extremely important to keep these electrical connectors dry.

6.1.3 Recommended Volumes

Follow these instructions to use the transport/calibration cup for calibration procedures.

- ✓ Ensure that an o-ring is installed in the o-ring groove of the transport/calibration cup bottom cap, and that the bottom cap is securely tightened.

NOTE: Do not over-tighten as this could cause damage to the threaded portions.

- ✓ Remove the probe sensor guard, if it is installed.
- ✓ Remove the o-ring, if installed, from the probe module and inspect the installed o-ring on the probe module for obvious defects and, if necessary, replace it with the extra o-ring supplied.
- ✓ Some calibrations can be accomplished with the probe module upright or upside down. A separate clamp and stand, such as a ring stand, is required to support the probe module in the upside down position.
- ✓ To calibrate, follow the procedures in the next section, Calibration Procedures. The approximate volumes of the reagents are specified below for both the upright and upside down orientations.
- ✓ When using the Transport/Calibration Cup for dissolved oxygen % saturation calibration, make certain that the vessel is vented to the atmosphere by loosening the bottom cap or cup assembly and that approximately 1/8 inch (3 cm) of water is present in the cup.

Sensor to Calibrate	Upright	Upside Down
Conductivity	55ml	55ml
pH/ORP	30ml	60ml

Table 6.1 Calibration Volumes

6.2 Calibration Procedures

6.2.1 Accessing the Calibrate Screen

1. Press the **On/off** key to display the run screen.
2. Press the **Escape** key to display the main menu screen.
3. Use the arrow keys to highlight the **Calibrate** selection.

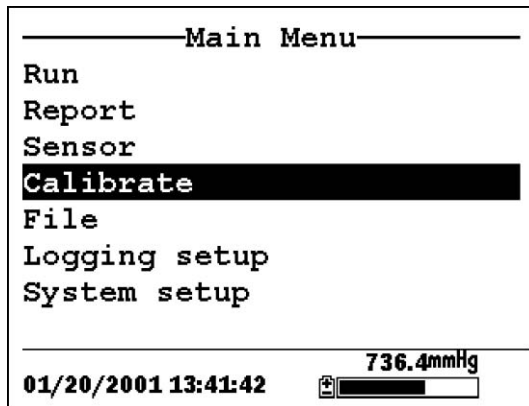

Figure 6.1 Main Menu

4. Press the **Enter** key. The Calibrate screen will be displayed.

Figure 6.2 Calibrate Screen

6.2.2 Conductivity Calibration

This procedure calibrates specific conductance (recommended), conductivity and salinity. Calibrating any one option automatically calibrates the other two.

1. Go to the calibrate screen as described in Section 6.2.1 *Accessing the Calibrate Screen..*
2. Use the arrow keys to highlight the **Conductivity** selection. See Figure 6.2 Calibrate Screen.
3. Press **Enter**. The Conductivity Calibration Screen is displayed.

Figure 6.3 Conductivity Calibration Selection Screen

4. Use the arrow keys to highlight the Specific Conductance selection.
5. Press **Enter**. The Conductivity Calibration Entry Screen is displayed.

Figure 6.4 Conductivity Calibration Selection Screen

6. Place the correct amount of conductivity standard (see Table 6.1 Calibration Volumes) into a clean, dry or pre-rinsed transport/calibration cup.

 **WARNING:** Calibration reagents may be hazardous to your health. See *Appendix D Health and Safety* for more information.

NOTE: For maximum accuracy, the conductivity standard you choose should be within the same conductivity range as the samples you are preparing to measure. However, we do not recommend using standards less than 1 mS/cm. For example:

- ✓ For fresh water use a 1 mS/cm conductivity standard.
- ✓ For brackish water use a 10 mS/cm conductivity standard.
- ✓ For seawater use a 50 mS/cm conductivity standard.

NOTE: Before proceeding, ensure that the sensor is as dry as possible. Ideally, rinse the conductivity sensor with a small amount of standard that can be discarded. Be certain that you avoid cross-contamination of solutions. Make certain that there are no salt deposits around the oxygen and pH/ORP sensors, particularly if you are employing standards of low conductivity.

7. Carefully immerse the sensor end of the probe module into the solution.
8. Gently rotate and/or move the probe module up and down to remove any bubbles from the conductivity cell.

NOTE: The sensor must be completely immersed past its vent hole. Using the recommended volumes from Table 6.1 Calibration Volumes, should ensure that the vent hole is covered.

9. Screw the transport/calibration cup on the threaded end of the probe module and securely tighten.

NOTE: Do not over tighten as this could cause damage to the threaded portions.

10. Use the keypad to enter the calibration value of the standard you are using.

NOTE: Be sure to enter the value in **mS/cm at 25°C**.

11. Press **Enter**. The Conductivity Calibration Screen is displayed.

Figure 6.5 Conductivity Calibration Screen

12. Allow at least one minute for temperature equilibration before proceeding. The current values of all enabled sensors will appear on the screen and will change with time as they stabilize.
13. Observe the reading under Specific Conductance. When the reading shows no significant change for approximately 30 seconds, press **Enter**. The screen will indicate that the calibration has been accepted and prompt you to press **Enter** again to Continue.

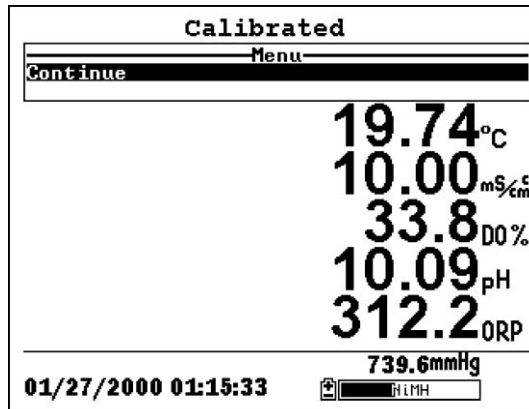

Figure 6.6 Calibrated

- 14.** Press **Enter**. This returns you to the Conductivity Calibrate Selection Screen, See Figure 6.3 Conductivity Calibration Selection Screen..
- 15.** Press **Escape** to return to the calibrate menu. See Figure 6.2 Calibrate Screen .
- 16.** Rinse the probe module and sensors in tap or purified water and dry.

6.2.3 Dissolved Oxygen Calibration

This procedure calibrates dissolved oxygen. Calibrating any one option (% or mg/L) automatically calibrates the other.

- 1.** Go to the calibrate screen as described in Section 6.2.1 *Accessing the Calibrate Screen.*

NOTE: The instrument must be on for at least 10 - 15 minutes to polarize the DO sensor before calibrating.

- 2.** Use the arrow keys to highlight the **Dissolved Oxygen** selection. See Figure 6.2 Calibrate Screen.
- 3.** Press **Enter**. The dissolved oxygen calibration screen is displayed.

Figure 6.7 DO Calibration Screen

DO Calibration in % Saturation

1. Use the arrow keys to highlight the DO% selection.
2. Press **Enter**. The DO Barometric Pressure Entry Screen is displayed.

Figure 6.8 DO Barometric Pressure Entry Screen

3. Place approximately 3 mm (1/8 inch) of water in the bottom of the transport/calibration cup.
4. Place the probe module into the transport/calibration cup.

NOTE: Make sure that the DO and temperature sensors are **not** immersed in the water.

5. Engage only 1 or 2 threads of the transport/calibration cup to ensure the DO sensor is vented to the atmosphere.
6. Use the keypad to enter the current local barometric pressure.

NOTE: If the unit has the optional barometer, no entry is required.

NOTE: Barometer readings that appear in meteorological reports are generally corrected to sea level and must be uncorrected before use (refer to Section 10.10 *Calibrate Barometer, Step 2*).

7. Press **Enter**. The DO% saturation calibration screen is displayed.

Figure 6.9 DO Sat Calibration Screen

8. Allow approximately ten minutes for the air in the transport/calibration cup to become water saturated and for the temperature to equilibrate before proceeding.

9. Observe the reading under DO %. When the reading shows no significant change for approximately 30 seconds, press **Enter**. The screen will indicate that the calibration has been accepted and prompt you to press **Enter** again to Continue. See Figure 6.6 Calibrated.
10. Press **Enter**. This returns you to the DO calibration screen, See Figure 6.7 DO Calibration Screen.
11. Press **Escape** to return to the calibrate menu. See Figure 6.2 Calibrate Screen.
12. Rinse the probe module and sensors in tap or purified water and dry.

DO Calibration in mg/L

DO calibration in mg/L is carried out in a water sample which has a known concentration of dissolved oxygen (usually determined by a Winkler titration).

1. Go to the DO calibrate screen as described in Section 6.2.3 *Dissolved Oxygen Calibration*, steps 1 through 3.
2. Use the arrow keys to highlight the **DO mg/L** selection.
3. Press **Enter**. The DO mg/L Entry Screen is displayed.

Figure 6.10 DO mg/L Entry Screen

4. Place the probe module in water with a known DO concentration.

NOTE: Be sure to completely immerse all the sensors.

5. Use the keypad to enter the known DO concentration of the water.
6. Press **Enter**. The Dissolved Oxygen mg/L Calibration Screen is displayed.

Figure 6.11 DO mg/L Calibration Screen

7. Stir the water with a stir bar, or by rapidly moving the probe module, to provide fresh sample to the DO sensor.
8. Allow at least one minute for temperature equilibration before proceeding. The current values of all enabled sensors will appear on the screen and will change with time as they stabilize.
9. Observe the DO mg/L reading, when the reading is stable (shows no significant change for approximately 30 seconds), press **Enter**. The screen will indicate that the calibration has been accepted and prompt you to press **Enter** again to Continue.
10. Press **Enter**. This returns you to the DO calibration screen. See Figure 6.7 DO Calibration Screen.
11. Press **Escape** to return to the calibrate menu. See Figure 6.2 Calibrate Screen.
12. Rinse the probe module and sensors in tap or purified water and dry.

6.2.4 pH Calibration

1. Go to the calibrate screen as described in *Section 6.2.1 Accessing the Calibrate Screen*.
2. Use the arrow keys to highlight the **pH** selection. See Figure 6.2 Calibrate Screen.
3. Press **Enter**. The pH calibration screen is displayed.

Figure 6.12 pH Calibration Screen

- Select the **1-point** option only if you are adjusting a previous calibration. If a 2-point or 3-point calibration has been performed previously, you can adjust the calibration by carrying out a one point calibration. The procedure for this calibration is the same as for a 2-point calibration, but the software will prompt you to select only one pH buffer.
- Select the **2-point** option to calibrate the pH sensor using only two calibration standards. Use this option if the media being monitored is known to be either basic or acidic. For example, if the pH of a pond is known to vary between 5.5 and 7, a two-point calibration with pH 7 and pH 4 buffers is sufficient. A three point calibration with an additional pH 10 buffer will not increase the accuracy of this measurement since the pH is not within this higher range.
- Select the **3-point** option to calibrate the pH sensor using three calibration solutions. In this procedure, the pH sensor is calibrated with a pH 7 buffer and two additional buffers. The 3-point calibration method assures maximum accuracy when the pH of the media to be monitored cannot be anticipated. The procedure for this calibration is the same as for a 2-point calibration, but the software will prompt you to select a third pH buffer.

4. Use the arrow keys to highlight the **2-point** selection.

5. Press **Enter**. The pH Entry Screen is displayed.

Figure 6.13 pH Entry Screen

6. Place the correct amount (see Table 6.1 Calibration Volumes) of pH buffer into a clean, dry or pre-rinsed transport/calibration cup.

NOTE: Always calibrate with buffer 7 first, regardless if performing a 1, 2, or 3 point calibration.

⚠ WARNING: Calibration reagents may be hazardous to your health. See *Appendix D Health and Safety* for more information.

NOTE: For maximum accuracy, the pH buffers you choose should be within the same pH range as the water you are preparing to sample.

NOTE: Before proceeding, ensure that the sensor is as dry as possible. Ideally, rinse the pH sensor with a small amount of buffer that can be discarded. Be certain that you avoid cross-contamination of buffers with other solutions.

7. Carefully immerse the sensor end of the probe module into the solution.
8. Gently rotate and/or move the probe module up and down to remove any bubbles from the pH sensor.

NOTE: The sensor must be completely immersed. Using the recommended volumes from Table 6.1 Calibration Volumes, should ensure that the sensor is covered.

9. Screw the transport/calibration cup on the threaded end of the probe module and securely tighten

NOTE: Do not over tighten as this could cause damage to the threaded portions.

10. Use the keypad to enter the calibration value of the buffer you are using **at the current temperature**.

NOTE: pH vs. temperature values are printed on the labels of all YSI pH buffers.

11. Press **Enter**. The pH calibration screen is displayed.

Figure 6.14 pH Calibration Screen

12. Allow at least one minute for temperature equilibration before proceeding. The current values of all enabled sensors will appear on the screen and will change with time as they stabilize.
13. Observe the reading under pH, when the reading shows no significant change for approximately 30 seconds, press **Enter**.

The screen will indicate that the calibration has been accepted and prompt you to press **Enter** again to Continue.

- 14.** Press **Enter**. This returns you to the specified pH Calibration Screen, See Figure 6.13 pH Entry Screen.
- 15.** Rinse the probe module, transport/calibration cup and sensors in tap or purified water and dry.
- 16.** Repeat steps 6 through 13 above using a second pH buffer.
- 17.** Press **Enter**. This returns you to the pH Calibration Screen, See Figure 6.12 pH Calibration Screen.
- 18.** Press **Escape** to return to the calibrate menu. See Figure 6.2 Calibrate Screen.
- 19.** Rinse the probe module and sensors in tap or purified water and dry.

6.2.5 ORP Calibration

- 1.** Go to the calibrate screen as described in Section 6.2.1 *Accessing the Calibrate Screen*.
- 2.** Use the arrow keys to highlight the **ORP** selection. See Figure 6.2 Calibrate Screen..
- 3.** Press **Enter**. The ORP calibration screen is displayed.

Figure 6.15 Specified ORP Calibration Screen

4. Place the correct amount (see Table 6.1 Calibration Volumes) of a known ORP solution (we recommend Zobell solution) into a clean, dry or pre-rinsed transport/calibration cup.

⚠ WARNING: Calibration reagents may be hazardous to your health. See *Appendix D Health and Safety* for more information.

NOTE: Before proceeding, ensure that the sensor is as dry as possible. Ideally, rinse the ORP sensor with a small amount of solution that can be discarded. Be certain that you avoid cross-contamination with other solutions.

5. Carefully immerse the sensor end of the probe module into the solution.
6. Gently rotate and/or move the probe module up and down to remove any bubbles from the ORP sensor.

NOTE: The sensor must be completely immersed. Using the recommended volumes from Table 6.1 Calibration Volumes should ensure that the sensor is covered.

7. Screw the transport/calibration cup on the threaded end of the probe module and securely tighten.

NOTE: Do not over tighten as this could cause damage to the threaded portions.

8. Use the keypad to enter the correct value of the calibration solution you are using at the current temperature. Refer to Table 6.2 Zobell Solution Values.

Temperature °C	Zobell Solution Value, mV
-5	270.0
0	263.5
5	257.0
10	250.5
15	244.0
20	237.5
25	231.0
30	224.5
35	218.0
40	211.5
45	205.0
50	198.5

Table 6.2 Zobell Solution Values

9. Press **Enter**. The ORP calibration screen is displayed.

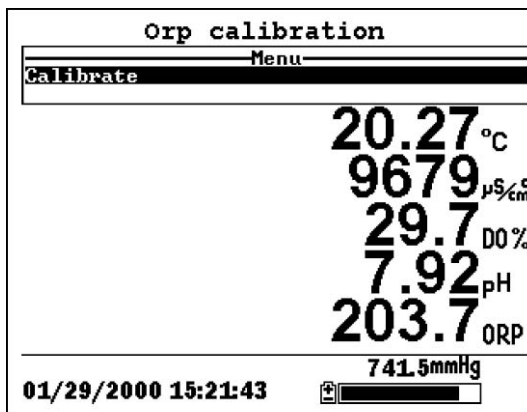

Figure 6.16 DO Cal Screen

10. Allow at least one minute for temperature equilibration before proceeding. The current values of all enabled sensors will appear on the screen and will change with time as they stabilize.

NOTE: Verify that the temperature reading matches the value you used in Table 6.2 Zobell Solution Values.

11. Observe the reading under ORP, when the reading shows no significant change for approximately 30 seconds, press **Enter**. The screen will indicate that the calibration has been accepted and prompt you to press **Enter** again to Continue.
12. Press **Enter**. This returns you to the Calibrate Screen. See Figure 6.2 Calibrate Screen.
13. Rinse the probe module and sensors in tap or purified water and dry.

6.3 Return to Factory Settings.

1. Go to the calibrate screen as described in Section 6.2.1 *Accessing the Calibrate Screen*.
2. Use the arrow keys to highlight the **Conductivity** selection. See Figure 6.2 Calibrate Screen.

NOTE: We will use the Conductivity sensor as an example; however, this process will work for any sensor.
3. Press **Enter**. The Conductivity Calibration Selection Screen is displayed. See Figure 6.3 Conductivity Calibration Selection Screen.
4. Use the arrow keys to highlight the **Specific Conductance** selection.
5. Press **Enter**. The Conductivity Calibration Entry Screen is displayed. See Figure 6.4 Conductivity Calibration Entry Screen.
6. Press and hold the **Enter** key down and press the **Escape** key.

Figure 6.17 ORP Calibration Screen

7. Use the arrow keys to highlight the **YES** selection.

CAUTION: This returns a sensor to the factory settings. For example, in selecting to return specific conductance to the factory setting, salinity and conductivity will automatically return to their factory settings.

8. Press **Enter**. This returns you to the Conductivity Calibrate Selection Screen, See Figure 6.3 Conductivity Calibration Selection Screen. .
9. Press **Escape** to return to the calibrate menu. See Figure 6.2 Calibrate Screen.

7. Run

The Run screen displays data from the sensors in real-time and allows the user to log sample data to memory for later analysis. Refer to Section 9 *Logging* for details on logging sample data.

7.1 Real-Time Data

NOTE: Before measuring samples you must prepare the probe module (refer to Section 3.4 *Preparing the Probe Module*), attach the probe module to the instrument (refer to Section 3.6 *Instrument/Cable Connection*) and calibrate the sensors (refer to Section 6 *Calibrate*).

1. Press the On/off key.

OR select Run from the main menu to display the run screen.

Figure 7.1 Run Screen

2. Make sure the probe sensor guard is installed.
3. Place the probe module in the sample. Be sure to completely immerse all the sensors.
4. Rapidly move the probe module through the sample to provide fresh sample to the DO sensor.
5. Watch the readings on the display until they are stable.
6. Refer to Section 9 *Logging* for instructions on logging sample data.

8. File

The File menu allows the user to view, upload or delete sample data and calibration record files stored in the YSI 556 MPS.

8.1 Accessing the File Screen

1. Press the **On/off** key to display the run screen.
2. Press the **Escape** key to display the main menu screen.

Figure 8.1 Main Menu Screen

3. Use the arrow keys to highlight the **File** selection.
4. Press the **Enter** key. The file screen is displayed.

Figure 8.2 File Screen

8.2 Directory

1. Go to the file screen as described in Section 8.1 *Accessing the File Screen*.
2. Use the arrow keys to highlight the **Directory** selection. See Figure 8.2 File Screen.
3. Press the **Enter** key. The file list screen is displayed.

NOTE: Files are listed in the order in which they are logged to memory. Sample Data files have the file extension **.dat**, while Calibration Record files have the file extension **.glp**.

Filename	Samples	Bytes
RED.dat	26	955
CAT.dat	63	2028
OHIO.dat	118	3623
00008004.glp	6	130

01/20/2001 13:57:40 736.8mmHg

Figure 8.3 File List Screen

4. Use the arrow keys to highlight a file.
5. Press the **Enter** key. The file details screen is displayed.

File details	
View file

01/20/2001 13:58:50 736.8mmHg

Figure 8.4 File Details Screen

6. Press the **Enter** key to view the file data. Refer to Section 8.3 *View File* for details.
7. Press the **Escape** key repeatedly to return to the main menu screen.

8.3 View File

1. Go to the file screen as described in Section 8.1 *Accessing the File Screen*. See Figure 8.2 File Screen.
2. Use the arrow keys to highlight the **View file** selection.
3. Press the **Enter** key. A list of files is displayed. See Figure 8.3 File List Screen.
4. Use the arrow keys to highlight an individual file.

NOTE: You may have to scroll down to see all the files.

5. Press the **Enter** key. The file data is displayed with the file name at the top of the display.

NOTE: If no file name was specified, the data is stored under the default name NONAME1.dat.

OHIO.dat

Figure 8.5 File Data Screen

6. Use the arrow keys to scroll horizontally and/or vertically to view all the data.
7. Press the **Escape** key repeatedly to return to the main menu screen.

8.4 Upload to PC

EcoWatch™ for Windows™ must be used as the PC software interface to the YSI 556 MPS. Refer to *Appendix G EcoWatch* for more information. EcoWatch for Windows® is available at no cost via a download from the YSI Web Site (www.ysi.com) or by contacting YSI Customer Support. Refer to *Appendix E Customer Service*.

8.4.1 Upload Setup

1. Disconnect the YSI 5563 Probe Module from the YSI 556 MPS instrument.
2. Connect the YSI 556 MPS to a serial (Comm) port of your computer via the 655173 PC Interface cable as shown in the following diagram:

Figure 8.2 Computer/Instrument Interface

3. Open EcoWatch for Windows on your computer.

NOTE: See *Appendix G EcoWatch* for installation instructions.

4. Click on the sonde/probe icon  in the upper toolbar.

5. Set the Comm port number to match the port the YSI 556 MPS is connected to. After this setup procedure, the following screen will be present on your PC monitor:

8.4.2 Uploading a .DAT File

1. Setup the instrument as described in Section 8.4.1 *Upload Setup*.
2. Go to the YSI 556 MPS file screen as described in Section 8.1 *Accessing the File Screen*.
3. Use the arrow keys to highlight the **Upload to PC** selection. See Figure 8.2 File Screen.
4. Press the **Enter** key. The file list screen is displayed. See Figure 8.3 File List Screen.
5. Use the arrow keys to highlight the DAT file that you wish to transfer and press **Enter**, both the YSI 556 MPS and PC displays show the progress of the file transfer.

Figure 8.3 File Transfer Progress Screen

NOTE: After transfer, the file will be located in the C:\ECOWWIN\DATA folder of your PC, designated with a .DAT extension.

6. After the file transfer is complete, close the terminal window (small window on the PC) by clicking on the “X” at its upper right corner.

7. Press the **Escape** key on the YSI 556 MPS repeatedly to return

to the main menu screen.

8.4.3 Uploading a Calibration Record (.glp) File

For more information on the calibration record, refer to *Appendix H Calibration Record Information*.

1. Setup up the instrument as described in Section 8.4.1 *Upload Setup*.
2. Go to the YSI 556 MPS file screen as described in Section
3. Use the arrow keys to highlight the Upload to PC selection. See Figure 8.2 File Screen.
4. Press the **Enter** key. The file list screen is displayed. See Figure 8.3 File List Screen.
5. Use the arrow keys to highlight the calibration record file that you wish to transfer and press **Enter**.
6. You will then be given a choice of uploading the file in three formats; **Binary, Comma & “” Delimited, and ASCII Text**.

NOTE: The binary format is reserved for future YSI software packages.

7. Choose an option and press Enter, both the YSI 556 and PC displays show the progress of the file transfer.

NOTE: After transfer, the file will be located in the C:\ECOWWIN\DATA folder of your PC, designated with the appropriate file extension.

NOTE: To view the Calibration Record data after upload, simply open the .txt file in a general text editor such as Wordpad or Notepad.

8. After the file transfer is complete, close the terminal window (small window on the PC) by clicking on the “X” at its upper right corner.

9. Press the **Escape** key repeatedly to return to the main menu screen.

8.5 File Memory

1. Go to the file screen as described in Section 8.1 *Accessing the File Screen*.
2. Use the arrow keys to highlight the **File memory** selection. See Figure 8.2 File Screen.
3. Press the **Enter** key. The file bytes used screen is displayed.

File bytes used	
Directory	6400
In files	152832
In deleted files	0
Free	1413632
Total	1572864

12/07/2000 16:39:19	737.0mmHg
	

Figure 8.4 File Bytes Used Screen

4. The amount of free memory is listed in line 4 of the file bytes used screen.

NOTE: If the amount of free memory is low, it may be time to delete all files (after first uploading all data to a PC). Refer to Section 8.6 *Delete All Files*.

5. Press the **Escape** key repeatedly to return to the main menu screen.

8.6 Delete All Files

NOTE: It is not possible to delete individual files in order to free up memory. The only way to free up memory is to delete ALL files present. Take care to transfer all files to your computer (refer to Section 8.4 Upload to PC) before deleting them.

1. Go to the file screen as described in Section 8.1 *Accessing the File Screen*.
2. Use the arrow keys to highlight the **Delete all files** selection. See Figure 8.2 File Screen.
3. Press the **Enter** key. The Delete all Files screen is displayed.

Figure 8.5 Delete All Files Screen

4. Use the arrow keys to highlight the **Delete** selection.
5. Press the **Enter** key.

Figure 8.10 Deleting

The progress of file deletion is displayed in bar graph format.

NOTE: Deleting all files in the directory will not change any information in the site list.

6. Press the Escape key repeatedly to return to the main menu screen.

9. Logging

9.1 Accessing the Logging Setup Screen

1. Press the **On/off** key to display the run screen.
2. Press the **Escape** key to display the main menu screen.

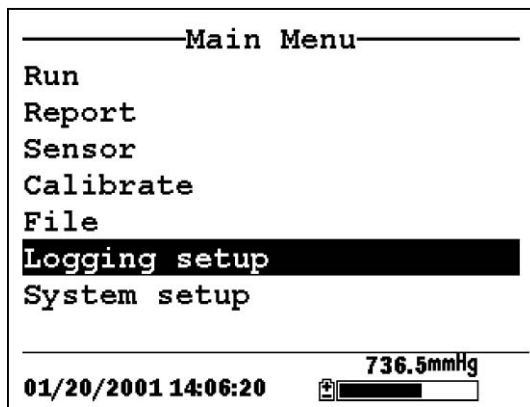

Figure 9.1 Main Menu

3. Use the arrow keys to highlight the **Logging setup** selection.
4. Press the **Enter** key. The logging setup screen is displayed.

Figure 9.2 Setup Screen

9.2 Setting Logging Interval

Follow steps below to set the interval for logging a data stream.

NOTE: If you do not specify an interval, the instrument will use a default interval setting of 1 second.

NOTE: It is not necessary to set a logging interval when logging a single sample.

1. Go to the logging setup screen as described in Section 9.1 *Accessing the Logging Setup Screen*.
2. Use the keypad to enter an interval between 1 second and 15 minutes. Refer to Section 2.9 *Keypad Use*.

NOTE: The interval field has hour, minute and second entry fields. Any entry over 1 hour will change automatically to a 15-minute setting.

3. Press the **Enter** key. The data stream interval is set.
4. Press the **Escape** key repeatedly to return to the main menu screen.

9.3 Storing Barometer Readings

NOTE: The **Store barometer** option is only available on instruments that are equipped with the optional barometer.

1. Go to the logging setup screen as described in Section 9.1 *Accessing the Logging Setup Screen*.
2. Use the arrow keys to highlight the **Store barometer** selection. See Figure 9.2 Logging Setup Screen.
3. Press the **Enter** key until a check mark is entered in the box next to the store barometer selection if you want to log barometric readings.

OR press the **Enter** key until the box next to the barometer selection is empty if you do not want to log barometric readings.

Figure 9.3 Store Barometer

4. Press the **Escape** key repeatedly to return to the main menu screen.

9.4 Creating a Site List

The site list option allows you to define file and site descriptions in the office or laboratory before moving to field logging studies. This is usually more convenient than entering the information at the site and is particularly valuable if you are visiting certain sites on a regular basis. The following section describes how to set up site lists which contain entries designated “Site Descriptions” that will be instantly available to the user in the field to facilitate the logging of data with pre-established naming of files and sites. There are two kinds of **Site Descriptions** available for use in Site lists:

- **Site Descriptions** associated with applications where data from a single site is always logged to a single file. This type is referred to as a “Single-Site Description” and is characterized by two parameters – a file name and a site name. Files logged to YSI 556 MPS memory under a **Single-Site Description** will be characterized primarily by the file name, but will also have the Site name attached, so that it is viewable in either the YSI 556 MPS **File directory** or in EcoWatch for Windows after upload to a PC
- **Site Descriptions** associated with applications where data from multiple sites are logged to a single file. This type is referred to as a “Multi-site Description” and is characterized by three parameters – a file name, a site name, and a site number. Files logged to YSI 556 MPS memory under a

Multi-site Description are characterized by a file name, but not a site name, since multiple sites are involved. However, each data point has a Site Number attached to it so that the user can easily determine the sampling site when viewing the data from the YSI 556 MPS **File** menu or processing the data in EcoWatch for Windows after upload to a PC.

Figure 9.4 Single-Site Descriptions

Figure 9.5 Multiple-Site Descriptions

NOTE: Site lists containing Single Site Descriptions are usually input with the designation **Store Site Number** INACTIVE in the YSI 556 MPS **Logging setup** menu. Thus, no site numbers appear in the first **Site list** example. Conversely, **Site lists** containing **Multi-Site Descriptions** MUST be input with the **Store Site Number** selection ACTIVE as shown in the second example.

To create a site list:

1. Go to the logging setup screen as described in Section 9.1 *Accessing the Logging Setup Screen*.
2. Use the arrow keys to highlight the **Use site list** selection.
3. Press the **Enter** key. A check mark is entered in the box next to the use site list selection *and* two new entries appear on the logging setup screen. See Figure 9.6 Logging Setup Screen.

Figure 9.6 Logging Setup Screen

4. Use the arrow keys to highlight the **Store site number** selection.
5. If you are creating Multi-Site Descriptions (which require that the site **number** be stored in your data files), press the **Enter** key until a check mark appears in the box next to the store site number selection.

OR Press the **Enter** key until the box next to the store site number selection is empty, to create Single-Site Descriptions. The site **name** will be stored in the header of your data files.

6. Use the arrow keys to highlight the **Edit site list** selection.
7. Press the **Enter** key. The edit site list screen is displayed. See Figure 9.7 Edit Site List Screen. The **Filename** field is ready for input.

Edit site list		
Site list		
Filename	Site name	Site Num
<input type="text"/>		0
<p> ⬅+▲ or ⬅+▼ to move a site ⬅+▶ to insert a site ⬅+◀ to delete a site Tip: Leave blank to use the same filename as the previous site. </p>		
		745.3mmHg
01/25/2001 11:42:21	<input type="text"/>	

Figure 9.7 Edit Site List Screen

8. Use the keypad to enter a filename up to 8 characters in length. Refer to Section 2.9 *Keypad Use*.
 9. Press the **Enter** key. The cursor moves to the right for the entry of a **Site name**.
 10. Use the keypad to enter a site name up to 11 characters in length. Refer to Section 2.9 *Keypad Use*.
- NOTE:** If the store site number selection is *not* checked, skip to Step 13.
11. Press the **Enter** key. The cursor moves to the site number entry position.
 12. Use the keypad to enter a site number up to 7 characters in length. Refer to Section 2.9 *Keypad Use*.
 13. Press **Enter**. The cursor moves to the next filename entry position.
 14. Repeat Steps 8 to 13 until all filenames and sites have been entered.
 15. Press **Escape** repeatedly to return to the main menu screen.

9.5 Editing a Site List

1. Go to the logging setup screen as described in Section 9.1 *Accessing the Logging Setup Screen*.
2. Use the arrow keys to highlight the **Edit Site List** selection. See Figure 9.6 Logging Setup Screen.
3. Press the **Enter** key. The edit site list screen is displayed.
4. Edit the site list using the keystrokes described below.

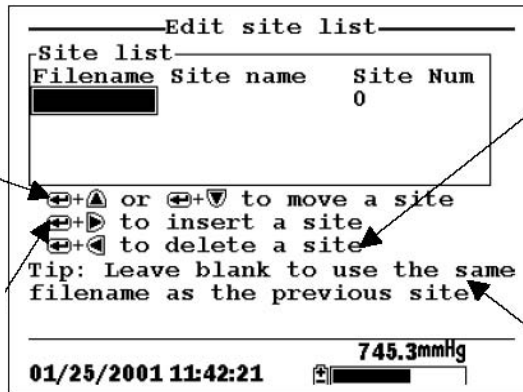

NOTE: Editing the site list will not have any effect on files stored in the instrument memory.

To MOVE a site:

Use the arrow keys to highlight a site. Press the Up or Down arrow key while holding down the Enter key.

To INSERT a site above another site:

Use the arrow keys to highlight the site. Press the Right arrow key while holding down the Enter key. Use keypad to input letters. Refer to Section 2.9 *Keypad Use*.

To DELETE a site:

Use the arrow keys to highlight a site. Press the Left arrow key while holding down the Enter key.

To use the same file name as the previous site: Leave the filename blank

Figure 9.1 Keystrokes for Editing Site List

9.6 Logging Data Without a Site List

1. Follow Steps 1 through 5 in Section 7.1 Real-Time Data.
2. Use the arrow keys to highlight the **Log one sample** selection on the run screen if only a single sample is being logged.

OR Use the arrow keys to highlight the **Start logging** selection on the run screen if a data stream is being logged.

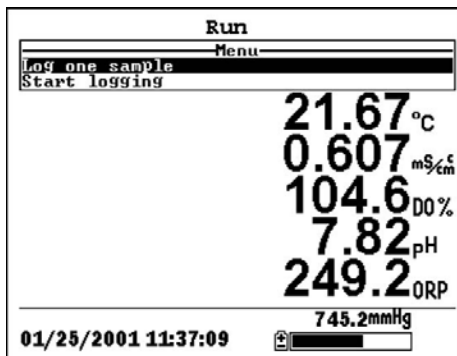

Figure 9.9 Run Screen

3. Press the **Enter** key. The Enter information screen is displayed.

Figure 9.10 Enter Information Screen

NOTE: The last filename used will be displayed.

4. Use the keypad to enter a file name. Refer to Section 2.9 *Keypad Use*.

NOTE: The instrument will assign a default file name of NONAME if no file name is specified.

5. Press the **Enter** key to input the file name.

- Use the arrow keys to highlight the **Site description** field in the enter information screen.

NOTE: Entering a Site Description is optional. You may leave the Site Description blank and skip to Step 9.

- Use the keypad to enter a site description name. Refer to Section 2.9 *Keypad Use*.

- Press the **Enter** key to input the site description.

NOTE: If you want to change the logging setup, such as sampling interval or storing the barometer reading, use the arrow keys to highlight the **Configure** field, press the **Enter** key, then refer to Section 9.2 *Setting Logging Interval* or 9.3 *Storing Barometer Readings* for details.

- Use the arrow keys to highlight the **OK** field in the center of the information screen.

- Press the **Enter** key to start logging.

NOTE: If the parameter mismatch screen is displayed, refer to Section 9.8 *Adding Data to Existing Files*.

- If a single point is being logged, the header on the run screen changes momentarily from **Menu** to **Sample logged** to confirm that the point was successfully logged. Skip to Step

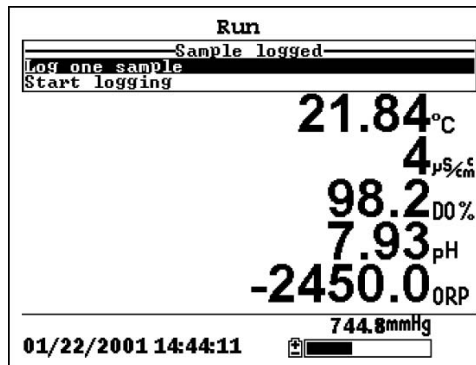

Figure 9.11 Sample Logged Screen

If a continuous stream of points is being logged, the start logging entry in the run screen changes from **Start logging** to **Stop logging**.

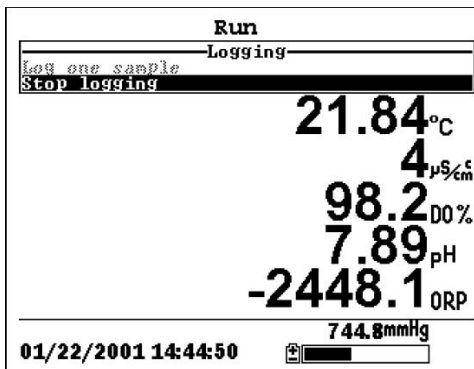

Figure 9.12 Logging Screen

12. At the end of the logging interval, press **Enter** to stop logging.
13. Refer to Section 8.3 *View File* to view the data on the instrument display.

9.7 Logging Data with a Site List

1. If you have not already created a site list, refer to Section 9.4 *Creating a Site List*.
2. Follow Steps 1 through 5 in Section 7.1 Real-Time Data.
3. Use the arrow keys to highlight the **Log one sample** selection on the run screen if only a single sample is being logged.

OR Use the arrow keys to highlight the **Start logging** selection on the run screen if a data stream is being logged. See Figure 9.9 Run Screen.
4. Press the **Enter** key. The Pick a site screen is displayed.

Figure 9.13 Pick a Site Screen

5. Use the arrow keys to highlight the **site** of your choice.

NOTE: If the site of your choice is grayed out in the site list, refer to Section 9.8 *Adding Data to Existing Files*.

NOTE: Refer to Section 9.5 *Editing a Site List* if you want to edit the site list.

6. Press the **Enter** key to start logging.

NOTE: If the parameter mismatch screen is displayed, refer to Section 9.8 *Adding Data to Existing Files*.

7. If a single point is being logged, the header on the run screen changes momentarily from **Menu** to **Sample logged** to confirm that the point was successfully logged. See Figure 9.11 *Sample Logged Screen*. Skip to Step 9.

If a continuous stream of points is being logged, the start logging entry in the run screen changes from **Start logging** to **Stop logging**. See Figure 9.12 *Logging Screen*.

8. At the end of the logging interval, press **Enter** to stop logging.

9. Refer to Section 8.3 *View File* to view the data on the instrument display.

9.8 Adding Data to Existing Files

In order to add new data to an existing file, the current logging and sensor setup must be *exactly* the same as when the file was created. The following settings must be the same:

- **Sensors enabled** (refer to Section 4 *Sensors*)
- **Store Barometer** (refer to Section 9.3 *Storing Barometer Readings*)
- **Store Site Number** (refer to Section 9.4 *Creating a Site List*)

If the current logging setup is not exactly the same as when the file was created, a parameter mismatch screen is displayed.

Figure 9.14 Parameter Mismatch Screen

NOTE: The right column shows parameters used when the file was created. The left column shows current parameters.

1. Press the **Down Arrow** key to scroll down and find the mismatch(es).
2. Use the following chart to resolve the mismatch(es).

Mismatch	Action	Reference
Sensor(s) missing from left column	Enable the missing sensor(s)	Section 4 <i>Sensors</i>
Extra sensor(s) listed in left column	Disable the extra sensor(s)	Section 4 <i>Sensors</i>
Barometer missing from left column, but present in right column	Enable the Store Barometer setting	Section 9.3 <i>Storing Barometer Readings</i>
Barometer present in left column, but missing from right column	Disable the Store Barometer setting	Section 9.3 <i>Storing Barometer Readings</i>
Store Site Number missing from left column, but present in right column	Enable the Store Site Number setting	Section 9.4 <i>Creating a Site List</i>
Store Site Number present in left column, but missing from right column	Disable the Store Site Number setting	Section 9.4 <i>Creating a Site List</i>

- 3.** Return to Section 9.6 *Logging Data without a Site List* or 9.7 *Logging Data with a Site List*.

10. System Setup

The YSI 556 MPS has a number of features that are user-selectable or can be configured to meet the user's preferences. Most of these choices are found in the **System setup** menu.

10.1 Accessing the System Setup Screen

1. Press the **On/off** key to display the run screen. See Figure Front View of YSI 556 MPS.
2. Press the **Escape** key to display the main menu screen.
3. Use the arrow keys to highlight the **System setup** selection.

Figure 10.1 Main Menu

4. Press the **Enter** key. The system setup screen is displayed.

Figure 10.2 System Setup Screen

NOTE: The first line of the **System setup** menu shows the current software version of your YSI 556 MPS. As software enhancements are introduced, you will be able to upgrade your YSI 556 MPS from the YSI Web site. Refer to Section 11.2 *Upgrading YSI 556 MPS Software* for details.

10.2 Language Setting

1. Go to the System Setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight **Language** on the System Setup screen. Press **Enter** to open the Language screen. .
3. Use the arrow keys to highlight your desired **Language**. Press **Enter**.
4. Press the Escape key repeatedly to return to the Main men

10.3 Date and Time Setup

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.

2. Use the arrow keys to highlight the **Date & time** selection on the system setup screen. See Figure 10.2 System Setup Screen.
3. Press **Enter**. The date and time setup screen is displayed.

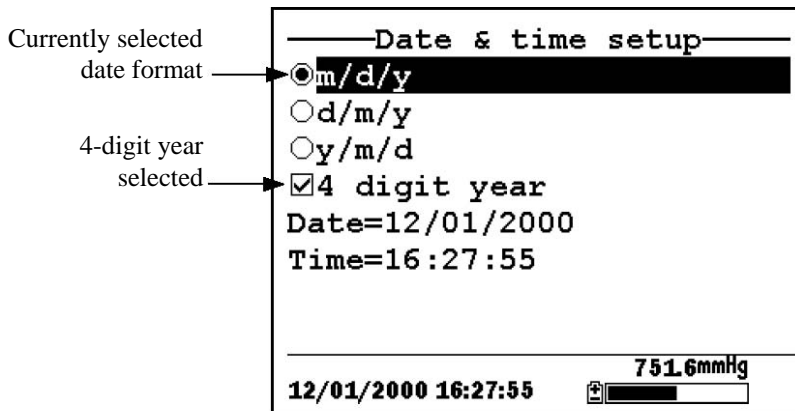

Figure 10.3 Date Setup Screen

NOTE: A black dot to the left of a date format indicates that format is selected.

4. Use the arrow keys to highlight your desired date format.
5. Press **Enter**.
6. Use the arrow keys to highlight the 4-digit year selection.
7. Press **Enter**. A check mark appears in the check box next to the 4-digit year selection.

NOTE: If unchecked, a 2-digit year is used.

8. Use the arrow keys to highlight the **Date** selection.
9. Press **Enter**. A cursor appears over the first number in the date.

10. Enter the proper number from the keypad for the highlighted date digit. The cursor moves automatically to the next date digit. Refer to Section 2.9 *Keypad Use* for more keypad information.
11. Repeat Step 10 until all date digits are correct.
12. Press **Enter** to input the specified date.
13. Use the arrow keys to highlight the **Time** selection.
14. Press **Enter**. A cursor appears over the first number in the time selection.
15. Enter the proper number from the keypad for the highlighted time digit. The cursor moves automatically to the next time digit.

NOTE: Use military format when entering time. For example, 2:00 PM is entered as 14:00.
16. Repeat Step 15 until all time digits are correct.
17. Press **Enter** to input the correct time.
18. Press the **Escape** key repeatedly to return to the Main menu screen.

10.4 Data Filter

The Data Filter is a software filter that eliminates sensor noise and provides more stable readings.

NOTE: YSI recommends using the default values for the data filter for most field applications.

However, users who are primarily interested in a fast response from their dissolved oxygen sensor should consider a change of the default time constant setting of 8 seconds to one of 2 seconds. This change can be made according to the instructions in Section 10.3.1 *Changing the Data Filter Settings* below. The disadvantage of lowering the time constant is that field pH readings may appear somewhat noisy if the cable is in motion.

10.4.1 Changing the Data Filter Settings

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **Data filter** selection. See Figure 10.1 Main Menu.
3. Press the **Enter** key. The Data filter setup screen is displayed.

Figure 10.4 Data Filter Screen

4. With Enabled highlighted, press the **Enter** key to Enable or Disable the data filter. A black dot to the left of the selection indicates the data filter is enabled.
5. Use the arrow keys to highlight the **Time constant** field.

NOTE: This value is the time constant in seconds for the software data filter. Increasing the time constant will result in greater filtering of the data, but will also slow down the apparent response of the sensors.

6. Use the keypad to enter a value. The default value is 8 and this value is ideal for most 556 field applications. As described in Section 10.3 *Data Filter* above, users who wish to decrease the response time of the DO readings at the expense of some noise for the pH readings determined

concurrently, should change the Time Constant to a value of 2.

7. Press the **Enter** key to enter the time constant.
8. Use the arrow keys to highlight the **Threshold** field.

NOTE: This value determines when the software data filter will engage/disengage, speeding the response to large changes in a reading. When the difference between two consecutive readings is larger than the threshold, then the reading is displayed unfiltered. When the difference between two consecutive readings drops below the threshold, readings will be filtered again.

9. Use the keypad to enter a value. The default value is 0.01.
10. Press the **Enter** key to enter the threshold.
11. Press the **Escape** key repeatedly to return to the Main menu screen.

10.5 Shutoff Time

The YSI 556 MPS shuts off automatically after 30 minutes of inactivity. The shut off time may be changed as described below.

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **Shutoff time** selection on the system setup screen. See Figure 10.2 System Setup Screen.
3. Use the keypad to enter a value from 0 to 60 minutes. The default value is 30.

NOTE: To disable the automatic shutoff feature, enter a zero (0).

4. Press the **Enter** key to enter the correct shutoff time.

5. Press the **Escape** key repeatedly to return to the main menu screen.

10.6 Comma Radix

The user can toggle between a period (default) and comma for the radix mark by selecting this item and pressing the **Enter** key as follows:

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **Comma radix** selection on the system setup screen. See Figure 10.2 System Setup Screen.
3. Press the **Enter** key. A check mark appears in the check box next to the comma radix selection indicating that the radix mark is a comma.

10.7 ID

This selection allows you to enter an identification name/number for your YSI 556 MPS. This ID name/number is logged in the header of each file.

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **ID** selection. See Figure 10.1 Main Menu.
3. Use the keypad to enter an alphanumeric ID up to 15 characters in length. Refer to Section 2.9 *Keypad Use*.
4. Press the **Enter** key to enter the ID.
5. Press the **Escape** key repeatedly to return to the main menu screen.

10.8 GLP Filename

This selection allows you to enter a different filename for the YSI 556 MPS Calibration Record file.

NOTE: The default filename is the “556 PC board Serial Number.glp.”

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **GLP Filename** selection. See Figure 10.1 Main Menu.
3. Use the keypad to enter a filename up to 8 characters in length. Refer to Section 2.9 *Keypad Use*.
4. Press the **Enter** key to enter the new filename.
5. Press the **Escape** key repeatedly to return to the main menu screen.

10.9 TDS Constant

This selection allows you to set the constant used to calculate Total Dissolved Solids (TDS). TDS in g/L is calculated by multiplying this constant times the specific conductance in mS/cm.

10.9.1 Changing the TDS Constant

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **TDS Constant** selection. See Figure 10.1 Main Menu.
3. Use the keypad to enter a value. Refer to Section 2.9 *Keypad Use*. The default value is 0.65.
4. Press the **Enter** key to enter the correct TDS constant.
5. Press the **Escape** key repeatedly to return to the main menu screen.

10.10 Barometer Units

The following information is only for instruments with the barometer option.

1. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
2. Use the arrow keys to highlight the **Barometer units** selection on the system setup screen. See Figure 10.2 System Setup Screen.
3. Press the **Enter** key. The Barometer units screen will appear.

Figure 10.5 Data Filter Screen

A black dot indicates the currently selected units.

4. Use the arrow keys to highlight your desired barometric unit.
5. Press the **Enter** key to select your choice. A black dot will appear in the circle next to your selected units.
6. Press the **Escape** key repeatedly to return to the main menu screen.

10.11 Calibrate Barometer

The optional barometer has been factory calibrated to provide accurate readings. However, some sensor drift may occur over time, requiring occasional calibration by the user, as follows:

1. Determine your local barometric pressure from an independent laboratory barometer or from your local weather service.
2. If the barometric pressure (BP) reading is from your local weather station, reverse the equation that corrects it to sea level.

NOTE: For this equation to be accurate, the barometric pressure units must be in mmHg.

$$\text{True BP} = (\text{Corrected BP}) - [2.5 * (\text{Local Altitude}/100)]$$

3. Go to the system setup screen as described in Section 10.1 *Accessing the System Setup Screen*.
4. Use the arrow keys to highlight the **Calibrate barometer** selection on the system setup screen. See Figure 10.2 System Setup Screen.
5. Press the **Enter** key. The Calibrate Barometer screen is displayed.

Figure 10.6 Barometer Calibration Screen

6. Use the keypad to input the known barometric pressure value as determined in Step 2.
7. Press the **Enter** key. The new barometer reading is displayed as well as the approximate offset from the factory reading.

NOTE: To return the sensor to the factory setting, subtract the offset amount from the current setting and repeat Steps 5 to 7.

8. Press the **Escape** key repeatedly to return to the main menu screen.

11. Maintenance

11.1 Sensor Care and Maintenance

Once the sensors have been properly installed, remember that periodic cleaning and DO membrane changes are required.

11.1.1 DO Sensor

For best results, we recommend that the KCl solution and the membrane cap be changed at least once every 30 days.

1. It is important to recognize that oxygen dissolved in the sample is consumed during sensor operation. It is therefore essential that the sample be continuously stirred at the sensor tip. If stagnation occurs, your readings will be artificially low. Stirring may be accomplished by mechanically moving the sample around the sensor tip, or by rapidly moving the sensor through the sample. The rate of stirring should be at least 1 foot per second.
2. Membrane life depends on usage. Membranes will last a long time if installed properly and treated with care. Erratic readings are a result of loose, wrinkled, damaged, or fouled membranes, or from large (more than 1/8" diameter) bubbles in the electrolyte reservoir. If erratic readings or evidence of membrane damage occurs, you should replace the membrane and the electrolyte solution. The average replacement interval is two to four weeks.
3. If the membrane is coated with oxygen consuming (e.g. bacteria) or oxygen producing organisms (e.g. algae), erroneous readings may occur.
4. Chlorine, sulfur dioxide, nitric oxide, and nitrous oxide can affect readings by behaving like oxygen at the sensor. If you suspect erroneous readings, it may be necessary to determine if these gases are the cause.
5. Avoid any environment that contains substances that may attack the probe module and sensor materials. Some of these substances are concentrated acids, caustics, and strong solvents. The sensor materials that come in contact

with the sample include FEP Teflon, acrylic plastic, EPR rubber, stainless steel, epoxy, polyetherimide and the PVC cable covering.

6. It is possible for the silver anode, which is the entire silver body of the sensor, to become contaminated. This will prevent successful calibration. To restore the anode, refer to Section *11.1.1 DO Sensor, Silver Anode Cleaning*.
7. For correct sensor operation, the gold cathode must always be bright. If it is tarnished (which can result from contact with certain gases), or plated with silver (which can result from extended use with a loose or wrinkled membrane), the gold surface must be restored. To restore the cathode, refer to Section *11.1.1 DO Sensor, Gold Cathode Cleaning*.
8. To keep the electrolyte from drying out, store the sensor in the transport/calibration cup with at least 1/8" of water.

Silver Anode Cleaning

After extended use, a thick layer of AgCl builds up on the silver anode reducing the sensitivity of the sensor. The anode must be cleaned to remove this layer and restore proper performance. The cleaning can be chemical or mechanical:

Chemical Cleaning: Remove the membrane cap and soak the entire anode section in a 14% ammonium hydroxide solution for 2 to 3 minutes, followed by a thorough rinsing with distilled or deionized water. The anode should then be thoroughly wiped with a wet paper towel to remove the residual layer from the anode.

Mechanical Cleaning: Sand off the dark layer from the silver anode with 400 grit wet/dry sandpaper. Wrap the sandpaper around the anode and twist the sensor. Rinse the anode with clean water after sanding, followed by wiping thoroughly with a wet paper towel.

NOTE: After cleaning, a new membrane cap must be installed. Refer to Section *3.4.3 Membrane Cap Installation*.

Turn the instrument on and allow the system to stabilize for at least 30 minutes. If, after several hours, you are still unable to calibrate, contact your dealer or YSI Customer Service. Refer to *Appendix E Customer Service*.

Gold Cathode Cleaning

For correct sensor operation, the gold cathode must be textured properly. It can become tarnished or plated with silver after extended use. The gold cathode can be cleaned by using the adhesive backed sanding disc and tool provided in the YSI 5238 Probe Reconditioning Kit.

Using the sanding paper provided in the YSI 5238 Probe Reconditioning Kit, wet sand the gold with a twisting motion about 3 times or until all silver deposits are removed and the gold appears to have a matte finish. Rinse the cathode with clean water after sanding, followed by wiping thoroughly with a wet paper towel. If the cathode remains tarnished, contact your dealer or YSI Customer Service. Refer to *Appendix E Customer Service*.

NOTE: After cleaning, a new membrane cap must be installed. Refer to Section 3.4.3 *Membrane Cap Installation*.

11.1.2 DO Sensor Replacement

1. Remove the probe sensor guard.

CAUTION: Thoroughly dry the sensor so that no water enters the probe module sensor port when the sensor is removed.

2. Insert the long end of the hex key wrench into the small hole in the side of the probe module bulkhead. Turn the wrench counterclockwise and remove the screw. (You do not have to remove the screw all the way to release the sensor.)
3. Pull the old DO sensor module straight out of the probe module body.

NOTE: The DO sensor is not threaded, it is keyed, so it cannot be removed by twisting.

Figure 11.1 DO Sensor Replacement

4. Insert the new DO sensor module. Make sure that the inside of the probe module sensor port and the o-ring on the sensor are clean, with no contaminants, such as grease, dirt, or hair. The DO sensor is keyed, or has a flat side, so that it cannot be aligned improperly.

NOTE: Make sure the DO sensor bottoms out before the set screw is inserted.

5. Insert the set screw into the small hole in the side of the probe module bulkhead, and turn clockwise to rethread.

⚠ CAUTION: Make sure that you do not cross-thread the set screw. Use the hex key wrench to tighten the screw in properly, making sure that the screw does not stick out of the side of the probe module bulkhead. The probe sensor guard will not thread on properly and damage may result if the screw is allowed to stick out.

NOTE: The YSI 5563 DO sensor is shipped dry. A shipping membrane was installed to protect the electrode. A new membrane cap must be installed before the first use. Refer to Section 3.4.1 Sensor Installation.

11.1.3 YSI 5564 pH and 5565 Combination pH/ORP Sensor Cleaning

Cleaning is required whenever deposits or contaminants appear on the glass and/or platinum surfaces of these sensors or when the response of the sensor becomes slow.

1. Remove the sensor from the probe module.
2. Initially, simply use clean water and a soft clean cloth, lens cleaning tissue, or cotton swab to remove all foreign material from the glass bulb (YSI 5564 and YSI 5565) and platinum button (YSI 5565). Then use a moistened cotton swab to carefully remove any material that may be blocking the reference electrode junction of the sensor.

 **CAUTION:** When using a cotton swab with the YSI 5564 or YSI 5565, be careful NOT to wedge the swab tip between the guard and the glass sensor. If necessary, remove cotton from the swab tip, so that the cotton can reach all parts of the sensor tip without stress.

NOTE: If good pH and/or ORP response is not restored by the above procedure, perform the following additional procedure:

1. Soak the sensor for 10-15 minutes in clean water containing a few drops of commercial dishwashing liquid.
2. GENTLY clean the glass bulb and platinum button by rubbing with a cotton swab soaked in the cleaning solution.
3. Rinse the sensor in clean water, wipe with a cotton swab saturated with clean water, and then re-rinse with clean water.

NOTE: If good pH and/or ORP response is still not restored by the above procedure, perform the following additional procedure:

1. Soak the sensor for 30-60 minutes in one molar (1 M) hydrochloric acid (HCl). This reagent can be purchased from most distributors. Be sure to follow the safety instructions included with the acid.
2. GENTLY clean the glass bulb and platinum button by rubbing with a cotton swab soaked in the acid.
3. Rinse the sensor in clean water, wipe with a cotton swab saturated with clean water, and then re-rinse with clean water. To be certain that all traces of the acid are removed from the sensor crevices, soak the sensor in clean water for about an hour with occasional stirring.

NOTE: If biological contamination of the reference junction is suspected or if good response is not restored by the above procedures, perform the following additional cleaning step:

1. Soak the sensor for approximately 1 hour in a 1 to 1 dilution of commercially available chlorine bleach.
2. Rinse the sensor with clean water and then soak for at least 1 hour in clean water with occasional stirring to remove residual bleach from the junction. (If possible, soak the sensor for period of time longer than 1 hour in order to be certain that all traces of chlorine bleach are removed.) Then re-rinse the sensor with clean water and retest.

11.1.4 Temperature/Conductivity Sensor Cleaning

The single most important requirement for accurate and reproducible results in conductivity measurement is a clean cell. A dirty cell will change the conductivity of a solution by contaminating it. The small cleaning brush included in the YSI 5511 Maintenance Kit is ideal for this purpose.

To clean the conductivity cell:

1. Dip the brush in clean water and insert it into each hole 1520 times.
2. Rinse the cell thoroughly in deionized or clean tap water.

NOTE: In the event that deposits have formed on the electrodes, perform the following additional procedure:

1. Use a mild detergent solution in combination with the brush. Dip the brush in the solution and insert it into each hole 1520 times.
2. Rinse the cell thoroughly in deionized or clean tap water.

NOTE: After cleaning, check the response and accuracy of the conductivity cell with a calibration standard.

NOTE: If this procedure is unsuccessful, or if sensor performance is impaired, it may be necessary to return the sensor to a YSI authorized service center for service. Refer to *Appendix E Customer Service*.

The temperature portion of the sensor requires no maintenance.

11.2 Upgrading YSI 556 MPS Software

1. Access the YSI Environmental Software Downloads page as described in *Appendix G EcoWatch* Step 1 through 3.
2. Click on the **YSI Instruments Software Updates** link (or scroll down until you see YSI 556 MPS).
3. Click on the file icon to the right of the **YSI 556 MPS** listing and save the file to a temporary directory on your computer.
4. After the download is complete, run the file (that you just downloaded) and follow the on screen instructions to install the YSI Code Updater on your computer. If you encounter difficulties, contact YSI customer service for advice. Refer to *Appendix E Customer Service*.
5. If necessary, disconnect the YSI 5563 Probe Module from the YSI 556 MPS instrument.

6. Connect the YSI 556 MPS to a serial port of your computer via the 655173 PC interface cable. See Figure 8.6 Computer/Instrument Interface.
7. Press the **On/off** key on the YSI 556 MPS to display the run screen.
8. Run the YSI Code Updater software that you just installed on your computer. The following window will be displayed:

9. Set the Comm port number to match the port that you connected the 655173 PC Interface Cable to, then click on the Start Code Update button.

The YSI 556 MPS screen will blank out and a progress indicator will be displayed on the PC.

When the update is finished (indicated on the PC screen), the YSI 556 MPS will return to the Run screen. See Figure 7.1 Run Screen.

- 10.** Close the YSI Code Updater window (on the PC) by clicking on the "X" in the upper right corner of the window.
- 11.** Disconnect the YSI 556 MPS from the 655173 PC interface cable and reconnect it to the YSI 5563 Probe Module. Refer to Section 3.6 *Instrument/Cable Connection*.

12. Storage

Proper storage between periods of usage will not only extend the life of the sensors, but will also ensure that the unit will be ready to use as quickly as possible in your next application.

12.1 General Recommendations for Short Term Storage

No matter what sensors are installed in the instrument, it is important to keep them moist without actually immersing them in liquid. Immersing them could cause some of them to drift or result in a shorter lifetime.

YSI recommends that short term storage of all multi-parameter instruments be done by placing approximately 1/2 inch of tap water in the transport/calibration cup that was supplied with the instrument, and by placing the probe module with all of the sensors installed into the cup. The use of a moist sponge instead of a 1/2 inch of tap water is also acceptable, as long as its presence does not compromise the attachment of the cup to the probe module. The transport/calibration cup should be sealed to prevent evaporation.

NOTE: Ensure that an o-ring is installed in the o-ring groove on the threaded end of the probe module body. See Figure 3.7 Transport/Calibration Cup Installation.

 **CAUTION:** The water level has to be low enough so that none of the sensors are actually under water. Check the transport/calibration cup periodically to make certain that the water is still present or the sponge is still moist.

NOTE: If the storage water (tap water) is accidentally lost during field use, environmental water can be used.

12.2 General Recommendations for Long Term Storage

12.2.1 Probe Module Storage

1. Remove the pH or pH/ORP sensor from the probe module and store according to the individual sensor storage instructions found in Section 12.2.2 *Sensor Storage*.
2. Seal the empty port with the provided port plug.

NOTE: Leave the conductivity/temperature sensor and

dissolved oxygen sensor, with membrane cap still on, in the probe module.

3. Place 1/2" of water, deionized, distilled or tap, in the transport/calibration cup.

 **CAUTION:** The water level has to be low enough so that none of the sensors are actually under water. Check the transport/calibration cup periodically to make certain that the water is still present or the sponge is still moist.

4. Insert the probe module into the cup.

NOTE: Ensure that an o-ring is installed in the o-ring groove on the threaded end of the probe module body. See Figure 3.7 Transport/Calibration Cup Installation.

12.2.2 Sensor Storage

Temperature/Conductivity Sensor

No special precautions are required. Sensor can be stored dry or wet, as long as solutions in contact with the thermistor and conductivity electrodes are not corrosive (for example, chlorine bleach). However, it is recommended that the sensor be cleaned with the provided brush prior to long term storage. Refer to Section 11.1.4 *Temperature/Conductivity Sensor Cleaning*.

pH and Combination pH/ORP Sensor

The key to sensor storage is to make certain that the reference electrode junction does not dry out. Junctions which have been allowed to dry out due to improper storage procedures can usually be rehydrated by soaking the sensor for several hours (overnight is recommended) in a solution which is 2 molar in potassium chloride. If potassium chloride solution is not available, soaking the sensor in tap water or commercial pH buffers may restore sensor function. However in some cases the sensor may have been irreparably damaged by the dehydration and will require replacement.

 **CAUTION:** Do not store the sensor in distilled or deionized water as the glass sensor may be damaged by exposure to this medium.

1. Remove the pH or pH/ORP sensor from the probe module.

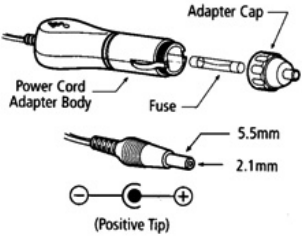

2. Seal the empty port with the provided port plug.
3. Place the sensor in the storage vessel (plastic boot or bottle) which was on the sensor at delivery. The vessel should contain a solution which is 2 molar in potassium chloride.

NOTE: Make certain that the vessel is sealed to prevent evaporation of the storage solution.

13. Troubleshooting

The following sections describe problems you may encounter when using the YSI 556 MPS and provides suggestions to overcome the symptom.

PROBLEM	POSSIBLE SOLUTION
Display Problems	
No display is visible after pressing the on/off key.	If C cells are used, make certain that they are installed properly with regard to polarity and that good batteries are used. If a rechargeable battery pack is used, place the pack in the instrument and charge for 30 minutes.
Instrument software appears to be locked up as evidenced by no response to keypad entries or display not changing.	First, attempt to reset the instrument by simply turning off and then on again. If this fails, remove battery power from the instrument for 30 seconds and then reapply power. When using C cells, remove the battery lid and one of the batteries; when using the rechargeable battery pack, remove the pack completely from the instrument. After 30 seconds replace the battery or battery pack and check for instrument function.
The 556 display flashes and the instrument speaker makes a continuous clicking sound.	The battery voltage is low. Change to new C cells or recharge the 6117 battery pack.
Water Damage to Instrument	
Leakage detected in battery compartment when using C cells.	Dispose of batteries properly. Dry the battery compartment using compressed air if possible. If corrosion is present on battery terminals, contact YSI Customer Service.
Water has contacted rechargeable battery pack.	Remove battery pack immediately. Send battery pack to YSI Product Service for evaluation. CAUTION: DO NOT REUSE BATTERY PACK UNTIL YSI PRODUCT SERVICE HAS EVALUATED IT.
Leakage suspected into the main cavity of the instrument case.	Remove the batteries immediately. Return the instrument to YSI Product Service.

PROBLEM	POSSIBLE SOLUTIONS
Optional Cigarette Lighter Charger	
<p>Power cord fuse blown.</p>  <p>The diagram illustrates the components of a cigarette lighter adapter. It shows a cylindrical 'Power Cord Adapter Body' with an 'Adapter Cap' and a 'Fuse' inside. A close-up of the tip shows two diameters: 5.5mm and 2.1mm. Below this, a polarity diagram shows a circle with a minus sign on the left and a plus sign on the right, with the text '(Positive Tip)' underneath.</p>	<ol style="list-style-type: none"> 1. Unscrew adapter's cap, remove tip and pull out fuse. 2. Replace fuse with a new 2-amp fast-blow fuse from an electronics store such as Radio Shack. 3. Reassemble the adapter and securely screw the cap back onto the adapter body.
File Problems	
<p>Upload of files from YSI 556 MPS to PC fails</p>	<ol style="list-style-type: none"> 1. Make sure that cable is connected properly to both 556 and PC. 2. Make certain that the proper Comm port is selected in EcoWatch for Windows.
<p>Barometer data is not stored with sensor data file.</p>	<p>Make sure Store barometer is active in the 556 Logging setup menu.</p>
<p>Site Descriptions in the Site List are "grayed-out" and not available for appending files with additional data.</p>	<p>There is a parameter mismatch between the current 556 setup and that initially used. Change the current logging and sensor setup to match the setup that was initially used to create the file.</p>
Sensor Problems	
<p>Dissolved Oxygen reading is unstable or inaccurate. Out of Range message appears during calibration.</p>	<p>Sensor not properly calibrated. Follow DO cal procedures.</p>
	<p>Membrane not properly installed or may be punctured. Replace membrane cap.</p>
	<p>DO sensor electrodes require cleaning. Follow DO cleaning procedure. Use 5511 Maintenance kit.</p>
	<p>Water in sensor connector. Dry connector; reinstall sensor.</p>
	<p>Algae or other contaminant clinging to DO sensor. Rinse DO sensor with clean water.</p>
	<p>Barometric pressure entry is incorrect. Repeat DO cal procedure.</p>
	<p>Calibrated at extreme temperature. Recalibrate at (or near) sample temperature.</p>
	<p>DO sensor has been damaged. Replace sensor.</p> <p>Internal failure. Return probe module for service.</p>

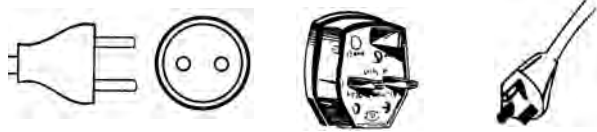

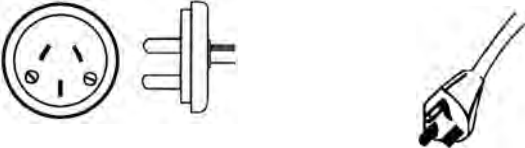

PROBLEM	POSSIBLE SOLUTIONS
Sensor Problems	
pH or ORP readings are unstable or inaccurate. Out of Range message appears during calibration.	Sensor requires cleaning. Follow sensor cleaning procedure.
	Sensor requires calibration. Follow cal procedures.
	pH sensor reference junction has dried out from improper storage. Soak sensor in tap water or buffer 4 until readings become stable.
	Water in sensor connector. Dry connector; reinstall sensor.
	Sensor has been damaged. Replace sensor.
	Calibration solutions out of spec or contaminated with other solution. Use new calibration solutions
	ORP fails Zobell check. Take into account temperature dependence of Zobell solution readings.
Conductivity unstable or inaccurate. Out of Range message appears during calibration	Conductivity improperly calibrated. Follow calibration procedure.
	Conductivity sensor requires cleaning. Follow cleaning procedure.
	Conductivity sensor damaged. Replace sensor.
	Calibration solution out of spec or contaminated. Use new calibration solution.
	Internal failure. Return probe module for service.
	Calibration solution or sample does not cover entire sensor. Immerse sensor fully.
Temperature, unstable or inaccurate	Water in connector. Dry connector; reinstall sensor.
	Sensor has been damaged. Replace the 5560 sensor.
Installed sensor has no reading	The sensor has been disabled. Enable sensor.
	Water in sensor connector. Dry connector; reinstall sensor.
	Sensor has been damaged. Replace sensor.
	Report output improperly set up. Set up report output.
	Internal failure. Return probe module for service.

If these guidelines and tips fail to correct your problem or if any other symptoms occur, contact YSI Customer Service for Advice. Refer to *Appendix E Customer Service*.

14. Appendix A YSI 556 MPS Specifications

For the most recent product specifications, please visit the YSI website:
www.ysi.com

15. Appendix B Instrument Accessories

ITEM #	ACCESSORY
5563-4	4m Cable with DO/temp/conductivity
5563-10	10m Cable with DO/temp/conductivity
5563-20	20m Cable with DO/temp/conductivity
5564	pH Kit
5565	pH/ORP Kit
6118	Rechargeable Battery Pack Kit for use in US
5094	Rechargeable Battery Pack Kit with universal charger and three adapter cables for use in international applications 
5095	Rechargeable Battery Pack Kit with universal charger and two adapter cables for use in international applications 
5083	Flow Cell – probe module is secured in the flow cell and groundwater is pumped through it. Displaced volume approx. 475 ml
3059	Flow Cell, low volume. Displaced volume approx. 200 ml
116505	Battery Lid
616	Charger, Cigarette Lighter – used to power up the instrument from a car's cigarette lighter
4654	Tripod
614	Ultra Clamp, C Clamp –used to clamp the instrument to a table top or car dashboard
6081	Large Carrying Case, Hard-sided
5085	Hands-free Harness
5065	Carrying Case, Form-fitted, for use in the field – has a clear vinyl window, shoulder strap, belt loop strap and hand strap

16. Appendix C Required Federal Communications Notice

The Federal Communications Commission defines this product as a computing device and requires the following notice.

This equipment generates and uses radio frequency energy and if not installed and used properly, may cause interference to radio and television reception. It has been type tested and found to comply with the limits for a Class A or Class B computing device in accordance with the specification in Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient the receiving antenna
- Relocate the computer with respect to the receiver
- Move the computer away from the receiver
- Plug the computer into a different outlet so that the computer and receiver are on different branch circuits.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet, prepared by the Federal Communications Commission, helpful: "How to Identify and Resolve Radio-TV Interference Problems". This booklet is available from the U.S. Government Printing Office, Washington, D.C. 20402, Stock No.0004-000-00345-4.

17. Appendix D Health Safety

YSI Conductivity Solutions: 3161, 3163, 3165, 3167, 3168, 3169

INGREDIENTS:

- Iodine
- Potassium Chloride
- Water

WARNING: INHALATION MAY BE FATAL

 **CAUTION: AVOID INHALATION, SKIN CONTACT, EYE CONTACT OR INGESTION. MAY EVOLVE TOXIC FUMES IN FIRE.**

Harmful if ingested or inhaled. Skin or eye contact may cause irritation. Has a corrosive effect on the gastro-intestinal tract, causing abdominal pain, vomiting, and diarrhea. Hyper-sensitivity may cause conjunctivitis, bronchitis, skin rashes etc. Evidence of reproductive effects.

FIRST AID:

INHALATION: Remove victim from exposure area. Keep warm and rest. In severe cases seek medical attention.

SKIN CONTACT: Remove contaminated cloth immediately. Wash affected area thoroughly with large amounts of water. In severe cases seek medical attention.

EYE CONTACT: Wash eyes immediately with large amounts of water, (approx. 10 minutes). Seek medical attention immediately.

INGESTION: Wash out mouth thoroughly with large amounts of water. Seek medical attention immediately.

YSI pH 4.00, 7.00, y 10.00: 3821, 3822, 3823**pH 4 INGREDIENTS:**

- Potassium Hydrogen Phthalate
- Formaldehyde
- Water

pH 7 INGREDIENTS:

- Sodium Phosphate, Dibasic
- Potassium Phosphate, Monobasic
- Water

pH 10 INGREDIENTS:

- Potassium Borate, Tetra
- Potassium Carbonate
- Potassium Hydroxide
- Sodium (di) Ethylenediamine Tetraacetate
- Water

 **CAUTION -AVOID INHALATION, SKIN CONTACT, EYE CONTACT OR INGESTION. MAY AFFECT MUCOUS MEMBRANES.**

Inhalation may cause severe irritation and be harmful. Skin contact may cause irritation; prolonged or repeated exposure may cause Dermatitis. Eye contact may cause irritation or conjunctivitis. Ingestion may cause nausea, vomiting and diarrhea.

FIRST AID:

INHALATION – Remove victim from exposure area to fresh air immediately. If breathing has stopped, give artificial respiration. Keep victim warm and at rest. Seek medical attention immediately.

SKIN CONTACT – Remove contaminated clothing immediately. Wash affected area with soap or mild detergent and large amounts of water (approx. 15-20 minutes). Seek medical attention immediately.

EYE CONTACT - Wash eyes immediately with large amounts of water (approx. 15-20 minutes), occasionally lifting upper and lower lids. Seek medical attention immediately.

INGESTION – If victim is conscious, immediately give 2 to 4 glasses of water and induce vomiting by touching finger to back of throat. Seek medical attention immediately.

YSI Zobell Solution: 3682

INGREDIENTS:

- Potassium Chloride
- Potassium Ferrocyanide Trihydrate
- Potassium Ferricyanide

⚠ CAUTION -AVOID INHALATION, SKIN CONTACT, EYE CONTACT OR INGESTION. MAY AFFECT MUCOUS MEMBRANES.

May be harmful by inhalation, ingestion, or skin absorption. Causes eye and skin irritation. Material is irritating to mucous membranes and upper respiratory tract. The chemical, physical, and toxicological properties have not been thoroughly investigated.

Ingestion of large quantities can cause weakness, gastrointestinal irritation and circulatory disturbances.

FIRST AID:

INHALATION – Remove victim from exposure area to fresh air immediately. If breathing has stopped, give artificial respiration. Keep victim warm and at rest. Seek medical attention immediately.

SKIN CONTACT – Remove contaminated clothing immediately. Wash affected area with soap or mild detergent and large amounts of water (approx. 15-20 minutes). Seek medical attention immediately.

EYE CONTACT - Wash eyes immediately with large amounts of water (approx. 15-20 minutes), occasionally lifting upper and lower lids. Seek medical attention immediately.

INGESTION – If victim is conscious, immediately give 2 to 4 glasses of water and induce vomiting by touching finger to back of throat. Seek medical attention immediately.

+1 937 767 7241 (Globally)
Monday through Friday, 8:00 AM to 5:00 ET

Fax: +1 937 767 9353 (orders)
+1 937 767 1058 (technical support)

Email: environmental@ysi.com or proseries@ysi.com

Mail: YSI Incorporated
1725 Brannum Lane
Yellow Springs, OH 45387 USA

Website: www.ysi.com

18.2 YSI Authorized Service Centers

YSI has authorized service centers throughout the United States and Internationally. For the nearest service center information, please visit www.ysi.com and click 'Support' or contact YSI Technical Support directly at 800-897-4151.

When returning a product for service, include the Product Return form with cleaning certification. The form must be completely filled out for a YSI Service Center to accept the instrument for service. The form may be downloaded from www.ysi.com by clicking on the 'Support' tab, then the Product Return Form button.

18.3 Cleaning Instructions

Equipment exposed to biological, radioactive, or toxic materials must be cleaned and disinfected before being serviced. Biological contamination is presumed for any instrument, probe, or other device that has been used with body fluids or tissues, or with wastewater. Radioactive contamination is presumed for any instrument, probe or other device that has been used near any radioactive source.

If an instrument, probe, or other part is returned or presented for service without a Cleaning Certificate, and if in our opinion it represents a potential

biological or radioactive hazard, our service personnel reserve the right to withhold service until appropriate cleaning, decontamination, and certification has been completed. We will contact the sender for instructions as to the disposition of the equipment. Disposition costs will be the responsibility of the sender.

When service is required, either at the user's facility or at a YSI Service Center, the following steps must be taken to ensure the safety of service personnel.

- In a manner appropriate to each device, decontaminate all exposed surfaces, including any containers. 70% isopropyl alcohol or a solution of 1/4-cup bleach to 1-gallon tap water is suitable for most disinfecting. Instruments used with wastewater may be disinfected with .5% Lysol if this is more convenient to the user.
- The user shall take normal precautions to prevent radioactive contamination and must use appropriate decontamination procedures should exposure occur.
- If exposure has occurred, the customer must certify that decontamination has been accomplished and that no radioactivity is detectable by survey equipment.
- Any product being returned to the YSI Repair Center should be packed securely to prevent damage.
- Cleaning must be completed and certified on any product before returning it to YSI.

18.4 Packing Procedure

- Clean and decontaminate items to ensure the safety of the handler.
- Complete and include the Cleaning Certificate.
- Place the product in a plastic bag to keep out dirt and packing material.
- Use a large carton, preferably the original, and surround the product completely with packing material.
- Insure for the replacement value of the product.

18.5 Warranty

The instrument is warranted for three years against defects in workmanship and materials when used for its intended purposes and maintained according to instructions. The probe module and cables are warranted for one year. The dissolved oxygen, temperature/conductivity, pH, and pH/ORP combination sensors are warranted for one year. Damage due to accidents, misuse, tampering, or failure to perform prescribed maintenance is not covered. The warranty period for chemicals and reagents is determined by the expiration date printed on their labels. Within the warranty period, YSI will repair or replace, at its sole discretion, free of charge, any product that YSI determines to be covered by this warranty.

To exercise this warranty, write or call your local YSI representative, or contact YSI Customer Service in Yellow Springs, Ohio. Send the product and proof of purchase, transportation prepaid, to the Authorized Service Center selected by YSI. Repair or replacement will be made and the product returned transportation prepaid. Repaired or replaced products are warranted for the balance of the original warranty period, or at least 90 days from date of repair or replacement.

Limitation of Warranty

This Warranty does not apply to any YSI product damage or failure caused by (i) failure to install, operate or use the product in accordance with YSI's written instructions, (ii) abuse or misuse of the product, (iii) failure to maintain the product in accordance with YSI's written instructions or standard industry procedure, (iv) any improper repairs to the product, (v) use by you of defective or improper components or parts in servicing or repairing the product, or (vi) modification of the product in any way not expressly authorized by YSI.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. YSI'S LIABILITY UNDER THIS WARRANTY IS LIMITED TO REPAIR OR REPLACEMENT OF THE PRODUCT, AND THIS SHALL BE YOUR SOLE AND EXCLUSIVE REMEDY FOR ANY DEFECTIVE PRODUCT COVERED BY THIS WARRANTY. IN NO EVENT SHALL YSI BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM ANY DEFECTIVE PRODUCT COVERED BY THIS WARRANTY.

19. Appendix F Ferrite Bead Installation

⚠ WARNING: If you are using your YSI 556 in a European Community (CE) country or in Australia or New Zealand, you must attach a ferrite bead to the 655173 PC Interface Cable and the YSI 6117 Charger Adapter Cable in order to comply with the Residential, Commercial and Light Industrial Class B Limits for radio-frequency emissions specified in EN55011 (CISPR11) for Industrial, Scientific and Medical laboratory equipment. These ferrite assemblies are supplied as part of cable kits.

1. Make a small loop (approximately 5 cm in diameter) in the cable near the YSI 556 MS-19 connector.
2. Lay the open ferrite bead assembly under the loop with the cable cross-over position within the cylinder of the ferrite bead.

Figure 19.1 Ferrite Bead Installation

3. Snap the two pieces of the bead together making certain that the tabs lock securely.
4. When the installation is complete, the 655173 and 6117 cables should resemble the following drawings.

Figure 19.2 Cables with Ferrite Beads

20. Appendix G EcoWatch

EcoWatch™ for Windows™ must be used as the PC software interface to the YSI 556 MPS. EcoWatch is a powerful tool that can also be used with YSI 6-series sondes. Many features of the software will only be utilized by advanced users or are not relevant to the 556 MPS at all. This section is designed in tutorial format to familiarize you with the commonly used features of EcoWatch so that it will be possible to:

- Upload data from a 556 MPS to a PC
- Assemble plots and reports of your data
- Zoom in on certain segments of the plots of your data to facilitate analysis
- Show statistical data for your studies
- Export data in spreadsheet-compatible formats
- Print plots and reports

The advanced features of EcoWatch can be explored by downloading a 6-series manual from the YSI Web Site (www.ysi.com), purchasing a hard copy of the manual through YSI Customer Service (Item # 069300), or utilizing the on-line help feature of the software.

20.1 Installing EcoWatch for Windows

EcoWatch for Windows is available at no cost via a download from the YSI Web Site – www.ysi.com

20.2 EcoWatch Tutorial

This EcoWatch tutorial is designed to teach you the commonly used operations associated with the software when used with your 556 MPS.

After you have uploaded a file, Refer to Section [8.4 Upload to PC](#), you will see two files in the C:\ECOWWIN\DATA directory; the file you transferred and a file supplied by YSI designated SAMPLE.DAT. This SAMPLE.DAT file is referred to in the remainder of this tutorial section. After following the instructions below for the analysis of SAMPLE.DAT, you apply the same analysis to the data file which was uploaded from your 556 MPS to assure that you are familiar with the basic features and capabilities of EcoWatch for Windows.

To start the analysis of the SAMPLE.DAT file, note that a shortened menu

bar is visible and many of the tools in the toolbar appear dimmed or “grayed out” before any file is opened (see below).

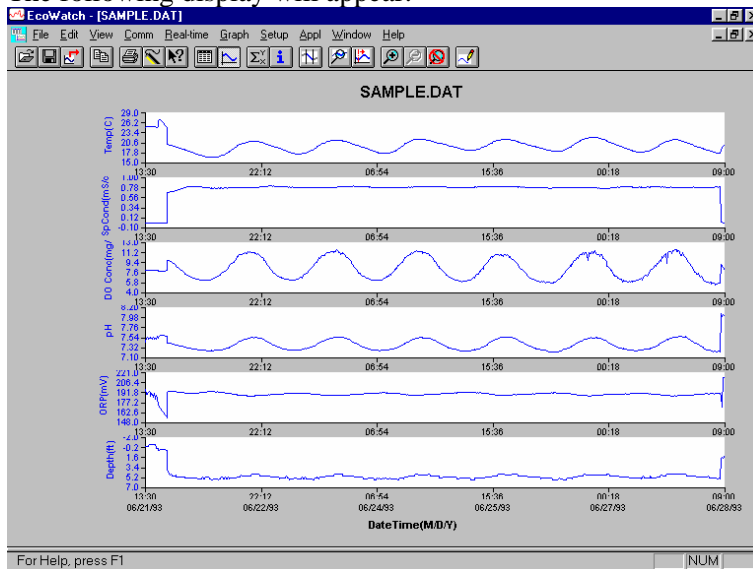

Full activation of EcoWatch features will be realized after a file is opened.

To open the sample data file:

1. Click the **File** menu  button in the toolbar.
2. Select the **SAMPLE.DAT** file.
3. Click **OK** to open the file.

The following display will appear:

Note that the data in this file appears as a graph of temperature, specific conductance, dissolved oxygen, pH, ORP, and depth, all versus time. The graphs are scaled automatically so that all data fits comfortably on the computer screen. Note also that this data file was obtained with a 6-series sonde for which a depth sensor is available. Depth is NOT a current parameter for the 556 MPS.

The **Table**  and **Graph**  buttons on the toolbar are on/off switches that are used to display or hide the graph and table pages respectively. When displaying a graph and a table at the same time, you can control the relative size of the two pages by placing the cursor over the small bar that separates them and

then dragging it to the desired location. Click the **Table**  button to generate the following dual display of data.

Now click the **Graph**  button (turn it off) to display only a report of your data as shown below. Note that the size of the report can be varied by clicking on the  and  buttons in the Toolbar.

Now return to the original graphic display by toggling the **Table** button “off” and **Graph** button “on”.

From the **Setup** menu, click **Graph**. Click **2 Traces per Graph** and notice that the parameters are now graphed in pairs for easy comparison of parameters.

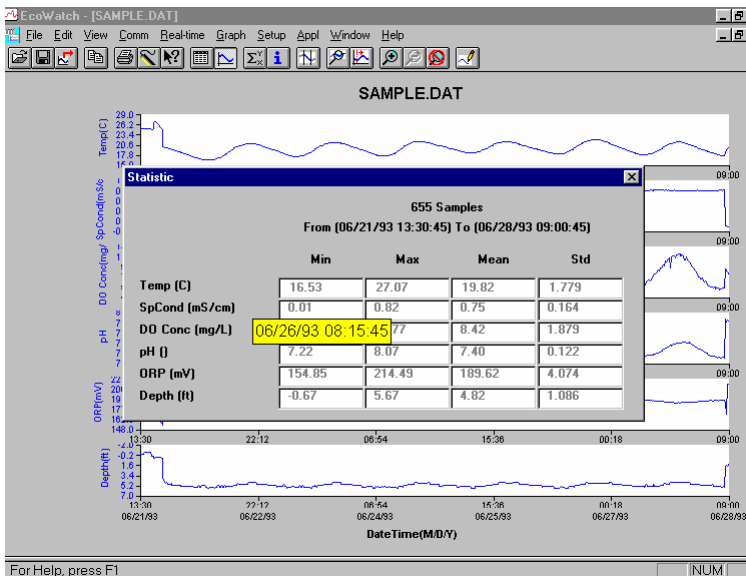

Click **1 Trace per Graph** to return the display to the original setting. Move the cursor to any position in the graph, then click and hold the right mouse button.

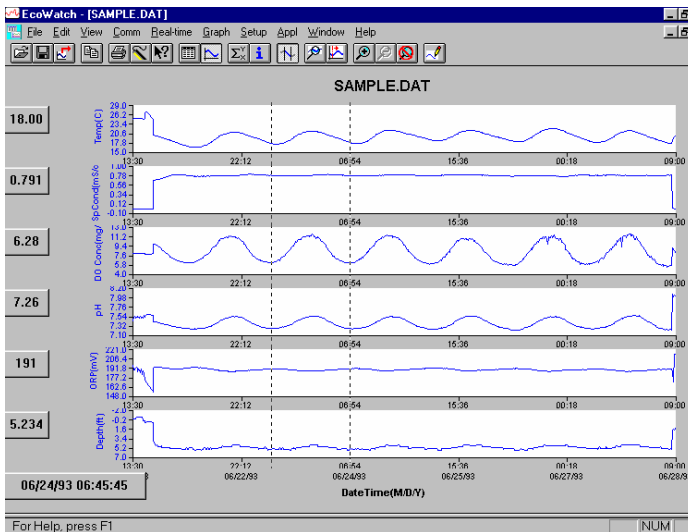

Note that the exact measurements for this point in time are displayed to the left of the graph. While holding down the right mouse button, move to another area on the graph. Notice how the measurements change as you move. When you release the mouse button, the display returns to normal.

To view statistical information for the study, click the **Statistics**  button on the toolbar. On the statistics window, click on any min or max value to display the time when it occurred.

After viewing statistics, click the “x” at the upper right to close the window and return to the normal display.

Now click on the delimiter  icon in the toolbar and then move the displayed icon to the graph. Click at the two points shown by dotted lines in the display below, being sure that the first click is to the left of the second.

The data between the two selected points will then be graphed in higher resolution as shown below.

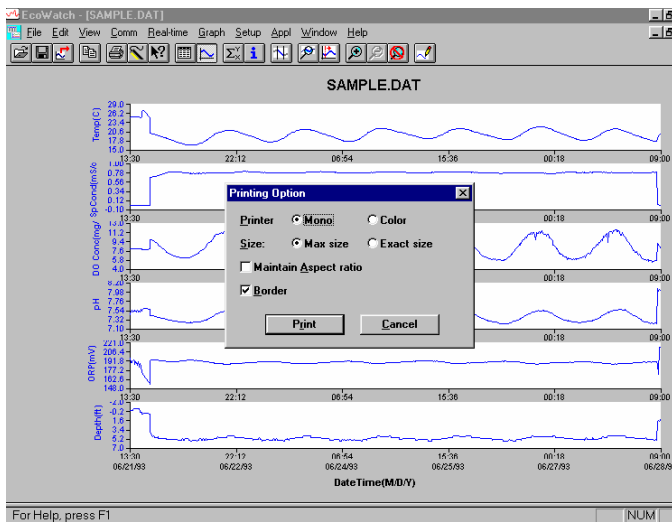

To return to the complete data set, select **Graph** from the toolbar and then click **Cancel Limits**.

Now select the  icon from the Toolbar to create a new data file which will allow your data to be imported into spreadsheets. Select the default export settings for a Comma Delimited File (.CDF) and click OK. A new spreadsheet-importable file (SAMPLE.CDF) is now present in the same folder as the SAMPLE.DAT file.

Now select the  icon from the toolbar to print the plot. Accept the default settings and click OK to complete the printing operation.

Finally, end the tutorial by saving the **Data Display** in the format shown. From the File menu, click **Save Data Display**.

Then type “Default” for the file name and click **Save**. The parameters, colors, format, and x-axis time interval associated with the current display are now saved and can be accessed any time in the future. Nine different data displays may be saved for any data file. You can easily switch between various displays of the data. The data files can be accessed by clicking **Load Data Display** from the file menu and then selecting the desired presentation.

20.2.1 Summary of Toolbar Capability

The EcoWatch toolbar includes buttons for some of the most common commands in EcoWatch, such as **File Open**. To display or hide the toolbar,

open the **View** menu and click on the **Toolbar** command. A check mark appears next to the menu item when the toolbar is displayed.

The toolbar is displayed across the top of the application window, below the menu bar.

Click to:

Open an existing data file (.DAT). EcoWatch displays the **Open** dialog box, in which you can locate and open the desired file.

Save the working Data Display of the active data file. EcoWatch displays the **Save Data Display** dialog box in which you can overwrite existing Data Display or save to a new one.

Export data as a graph in Window Meta File (.WMF) format or as data in Comma Delimited (.CDF) format.

Copy the whole graph page or data from the selection on the table to the clipboard.

Print the active graph page or table page depending on which one is currently active.

Open a new terminal window to communicate with the sonde.

Access context sensitive help (Shift+F1).

Toggle table window during file processing.

Toggle graph window during file processing.

Display study statistics.

Display study info.

Limit the data to be processed.

Enlarge a selective portion of graph.

Center the graph under the cursor.

Enlarge graph of table 20%.

Reduce graph of table 20%.

Return graph or table to its normal size (unzoom).

Redraw the graph.

20.2.2 Other capabilities

The above tutorial and function list for the toolbar provide basic information to allow you to view and analyze the field data which was stored in your 556 MPS. Some of the other commonly used capabilities of EcoWatch which the user may want to explore are listed below:

- Customize the units for each parameter, e.g., report uS/cm instead of mS/cm for conductivity.
- Customize the order of parameters in each plot or report.
- Customize the colors and fonts of each data display.
- Manually scale the y-axis sensitivity for each parameter.
- Merging of two or more data files with compatible parameter formats
- View information about the study such as number of points, instrument serial number, etc. which was stored in the 556 with the data.
- Print data reports in different statistical formats.
- Create plots of parameter vs. parameter rather than parameter vs. time.

These additional features of EcoWatch for Windows are explained in detail in the YSI 6-series manual (which can be downloaded at no cost from the YSI Web Site as described above) and the Help selection in the EcoWatch menu bar. To purchase a hard copy of the 6-series manual, contact YSI Customer Service using the contact information in *Appendix E Customer Service*.

21. Appendix H Calibration Record Information

When your YSI 556 MPS sensors are initially calibrated, relevant information about the sensors will be stored in a separate file in the YSI 556 MPS memory.

NOTE: This file, by default, will have the name “556 Circuit Board Serial Number.glp.” The circuit board serial number is assigned at the factory and has a hexadecimal format such as 000080A4. Thus the default calibration record file would be designated 00080A4.glp. Refer to Section 10.7 *GLP Filename* to change the filename.

The information in the calibration record will track the sensor performance of your instrument and should be particularly useful for programs operating under Good Laboratory Practices (GLP) protocols.

21.1 Viewing the Calibration Record (.glp) File

NOTE: Make certain that you have performed a calibration on at least one of the sensors associated with your YSI 556 MPS.

Follow the procedures outlined in Section 8.3 *View File*.

21.2 Uploading the Calibration Record (.glp) File

NOTE: Make certain that you have performed a calibration on at least one of the sensors associated with your YSI 556 MPS.

Follow the procedures outlined in Section 8.4 *Upload to PC*.

21.3 Understanding the Calibration Record (.glp) File

1. Open a calibration record file. Refer to Section 8.3 *View File*.
2. Use the arrow keys to scroll horizontally and/or vertically to view all the data.

01/24/2001 08:39:19 

Figure 21.2 Calibration Record Screen 2

NOTE: Each sensor (not parameter) is characterized by either 1 line (Conductivity, Dissolved Oxygen, ORP, TDS, or Barometer (Optional)) or 2 lines (pH) of calibration documentation.

The left hand portion of each calibration entry shows the date and time that a calibration of a particular sensor was performed. In addition, each calibration entry is characterized by the instrument serial number, as defined by YSI. See Figure 21.1 Calibration Record Screen 1. The right hand portion shows the YSI designation of the calibration constants and their values after their calibration has been performed. A more detailed description of the calibration constants is provided below:

- **Conductivity Gain** – A relative number which describes the sensitivity of the sensor. Basically, the value represents the calculated cell constant divided by the typical value of the cell constant (5 cm⁻¹).
- **DO Gain** – A relative number which describes the sensitivity of the sensor. Basically, the value represents the sensor current at the time of calibration divided by the typical value of the sensor current (15 uA).
- **pH Gain** – A number which basically represents the sensitivity of the pH sensor. To remove the effect of temperature on the slope of the relationship of probe output in mv versus pH, the value of pH/mv is multiplied by the temperature in degrees Kelvin (K).
- **pH Offset** – A number which basically represents the offset (or intercept) of the relationship of probe output in mv versus pH, the value of pH is multiplied by the temperature in degrees Kelvin (K).

Anytime you perform a calibration, information concerning the calibration constants will be logged to the Calibration Record file (.glp file). However, if the **Delete All Files** command is used, Refer to Section 8.6 *Delete All Files*, the Calibration Record file will also be lost. It is critical that this file should be uploaded to your PC prior to issuing a **Delete All Files** command. Refer to Section 8.4 *Upload to PC*.
