RE: 2019 4TH QTR GW Wells

OrderNo.: 1910D49

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 7 sample(s) on 10/25/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

RE: 2019 4th QTR GW Wells

OrderNo.: 1910E89

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 10 sample(s) on 10/30/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

QA/QC Summary

QC Parameter	Yes / No (if No, see Comments below)
1. Sample Holding Time Valid?	Yes
2. Instrument Tunes Valid?	Yes
3. Method Blank(s) Valid?	Yes
4. Internal Standard Response(s) Valid?	Yes
5. Initial Calibration Curve(s) Valid?	Yes
6. Continuing Calibration(s) Valid?	Yes
7. Surrogate Recoveries Valid?	No
8. QC Sample Recoveries Valid?	No

Comments:

Four of the eight samples required dilution due to the high level of petroleum contamination present in the extracts and this contributed to the various QC failures (examples below).
Surrogate recovery was low, surrogate recovery failure due to matrix interference, and surrogate recovery for one of the six surrogates was above laboratory and method acceptance limits.
LFB/LFBD RPD exceeded the laboratory acceptance limit. Recovery met acceptance criteria.

QA/QC Summary

QC Parameter	Yes / No (if No, see Comments below)
1. Sample Holding Time Valid?	Yes
2. Instrument Tunes Valid?	Yes
3. Method Blank(s) Valid?	Yes
4. Internal Standard Response(s) Valid?	Yes
5. Initial Calibration Curve(s) Valid?	Yes
6. Continuing Calibration(s) Valid?	Yes
7. Surrogate Recoveries Valid?	No
8. QC Sample Recoveries Valid?	No

Comments:

Four of the eight samples required dilution due to the high level of petroleum contamination present in the extracts and this contributed to the various QC failures (examples below).
Surrogate recovery was low, surrogate recovery failure due to matrix interference, and surrogate recovery for one of the six surrogates was above laboratory and method acceptance limits.
LFB/LFBD RPD exceeded the laboratory acceptance limit. Recovery met acceptance criteria.

RE: 2019 4th QTR GW Wells

OrderNo.: 1910F99

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 7 sample(s) on 10/31/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

QA/QC Summary

QC Parameter	Yes / No (if No, see Comments below)
1. Sample Holding Time Valid?	Yes
2. Instrument Tunes Valid?	Yes
3. Method Blank(s) Valid?	Yes
4. Internal Standard Response(s) Valid?	Yes
5. Initial Calibration Curve(s) Valid?	Yes
6. Continuing Calibration(s) Valid?	Yes
7. Surrogate Recoveries Valid?	No
8. QC Sample Recoveries Valid?	No

Comments:

All five of the samples required dilution due to the high level of petroleum contamination present in the extracts and this contributed to the various QC failures (examples below).
Surrogate recovery for one of the six surrogates was above laboratory and method acceptance limit and surrogate recovery was above laboratory and method acceptance limits (potential chemist error thus data for this analyte is suspect). LFB/LFBD RPD exceeded the laboratory acceptance limit. Recovery met acceptance criteria.

2. Instrument Tunes Valid?	Yes
3. Method Blank(s) Valid?	Yes
4. Internal Standard Response(s) Valid?	Yes

7. Surrogate Recoveries Valid?	No
8. QC Sample Recoveries Valid?	No

Comments:

All five of the samples required dilution due to the high level of petroleum contamination present in the extracts and this contributed to the various QC failures (examples below).
Surrogate recovery for one of the six surrogates was above laboratory and method acceptance limit and surrogate recovery was above laboratory and method acceptance limits (potential chemist error thus data for this analyte is suspect). LFB/LFBD RPD exceeded the laboratory acceptance limit.
Recovery met acceptance criteria.

RE: 2019 4th QTR GW Well

OrderNo.: 1911178

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 7 sample(s) on 11/6/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: 2019 4th QTR GW Wells

OrderNo.: 1911858

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 7 sample(s) on 11/19/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

RE: 2019 SEMI ANNUAL EVAPORATION PONDS

OrderNo.: 1911A00

Dear Brian Moore:

Hall Environmental Analysis Laboratory received 5 sample(s) on 11/21/2019 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.
