RE: Discharge Plan Requirement BW-018 Trucker's #2 Brine Station Lea County, New Mexico

Dear Mr. Calhoun,

A review of the file for the discharge plan BW-018, Trucker's #2 Brine Station, located in the NE/4 SW/4, Section 33, Township 18 South, Range 38 East, NMPM, Lea County, New Mexico, has revealed that payment of the February, 1993 discharge plan flat fee has not been submitted to the Oil Conservation Division (OCD). This fee, in the amount of \$690.00, was due on February 11, 1993.

In order to continue to be in compliance with Water Quality Control Commission (WQCC) Regulation 3-114 B.6, please remit this fee to the OCD as soon as possible. All checks should be made payable to: NMED-WATER QUALITY MANAGEMENT and addressed to the OCD Santa Fe office.

If there are any questions on this matter, please feel free to contact me at (505)827-4080.

Sincerely,

Robert L. Myers II

SUBJECT:

Delinquent Discharge Plan Fee Payment

Below is a chronological list of discharge plan recipients who have failed to pay their discharge plan filing and/or plan fee.

DP #	Company	<u>Facility</u>	Fee Owed	<u>Date Due</u>
GW-099	Halliburton	Farmington SC	1380	12/30/92
BW-018	Unichem	Trucker #2 BW	690	2/11/93
GW-069	Continental	Carlsbad GP	667	4/29/93
GW-113	Transwestern	Eunice CS	740	6/22/93
GW-150	Llano	Pure Gold CS	690	11/22/93
GW-157	P & A	Farmington SC	1380	12/28/93
GW-115	Halliburton	Artesia SC	1380	1/13/94
GW-161	Associated NG	Rosa CS	690	4/ 7/94
GW-016	GPM	Eunice GP	1717.50	4/25/94
GW-137	Continental	Carrasco CS	276	4/28/94
GW-069	Continental	Carlsbad GP	667	4/29/94
GW-141	Parker&Parsley	Loving GP	667	5/ 6/94
		TOTAL OWED	10944.50	

Note that the last five have recently been due and probably are not really late. However, the Continental Carrasco compressor station fee is a incremental fee, so they had one year since last payment to prepare to submit it.

Mr. Richard Brakey Unichem International Inc. P.O. Box 1499 Hobbs, New Mexico 88240

RE: Approval of Discharge Plan BW-18

Unichem International Inc., Trucker's No. 2 Brine Station

Lea County, New Mexico

Dear Mr. Brakey:

The discharge plan renewal BW-18 for the Unichem International Inc., Trucker's No. 2 Brine Station located in the NE/4 SW/4, Section 33, Township 18 South, Range 38 East, NMPM, Lea County, New Mexico, is hereby approved under the conditions contained in the enclosed attachment. The renewal application consists of the original discharge plan as approved December 18, 1982; the renewal of the discharge plan approved July 19, 1988; and the renewal application dated November 13, 1992.

The discharge plan renewal was submitted pursuant to Section 5-101.B.3 of the New Mexico Water Quality Control Commission (WQCC) Regulations. It is approved pursuant to Sections 5-101.A and 3-109.C. Please note Sections 3-109.E and 3-109.F which provide for possible future amendments or modifications of the plan. Please be advised that the approval of this plan does not relieve you of liability should your operation result in actual pollution of surface water, ground water, or the environment which may be actionable under other laws and/or regulations.

The monitoring and reporting shall be as specified in the above referenced materials. Please note that Section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan." Pursuant to Section 3-107.C you are required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume.

Mr. Richard Brakey February 11, 1993 Page 2

Pursuant to Section 3-109.G.4, this plan is for a period of five (5) years. This approval will expire July 18, 1998, and you should submit an application for renewal in ample time before this date. Note that under Section 5-101.G of the regulations, if a discharger submits a discharge plan renewal application at least 180 days before the discharge plan expires and is in compliance with the approved plan, then the existing discharge plan will not expire until the application for renewal has been approved or disapproved.

The discharge plan application for the Unichem Trucker's No. 2 Brine Facility is subject to the WQCC Regulation 3-114 discharge plan fee. Every billable facility submitting a discharge plan will be assessed a fee equal to the filing fee of fifty (50) dollars plus one-half of the flat fee or six-hundred and ninety (690) dollars for brine extraction facilities.

The OCD has received your \$50 filing fee. The flat fee for an approved discharge plan may be paid in a single payment due at the time of approval, or in equal annual installments over the duration of the discharge plan, with the first payment due upon receipt of this approval.

Please make all checks out to: NMED - Water Quality Management and addressed to the OCD Santa Fe Office.

On behalf of the staff of the Oil Conservation Division, I wish to thank you and your staff for your cooperation during this discharge plan review.

Sincerely,

William J. LeMay

Director

WJL/kmb

ATTACHMENT TO DISCHARGE PLAN BW-18 APPROVAL UNICHEM TRUCKER'S NO. 2 BRINE FACILITY DISCHARGE PLAN REQUIREMENTS

(February 11, 1993)

- 1. <u>Monitor Well Inspection:</u> The leak detection monitor well for your single-lined brine storage pond will be inspected quarterly. If fluids are detected in the monitor well the conductivity of the fluid will be measured and the OCD Santa Fe Office will be notified immediately.
- 2. <u>Brine Storage Pond:</u> A minimum freeboard will be maintained in the pond so that no overtopping of brine occurs. Any repairs or modifications to the pond liner must receive prior OCD approval. In the future, if the pond liner is replaced or a new pond is constructed, then a double synthetic liner with leak detection will be incorporated into the design.
- 3. <u>Brine Transfer Lines:</u> All below-grade brine transfer lines will be tested for integrity once every five years with the first test conducted prior to the next discharge plan renewal (July 18, 1998). Prior to conducting the integrity test the OCD will be notified of the exact method and date.
- 4. <u>Sump Inspection:</u> The sump located at the brine loading area will be cleaned out and visually inspected on an annual basis. Any new sumps or below-grade tanks will be approved by the OCD prior to installation and will incorporate secondary synthetic containment and leak detection in their designs.
- 5. <u>Spill Containment:</u> All brine storage and transfer will be managed in such a manner to keep brine off of the ground surface. Any brine spilled onto the ground surface will be cleaned-up upon discovery.
- 6. Spill Reporting: All spills and/or leaks will be reported to the OCD Hobbs District Office pursuant to WQCC Rule 1-203 and OCD Rule 116.
- 7. <u>Production Method:</u> Fresh water will be injected down the annulus and brine will be recovered up the tubing. Reverse flow will be allowed once a month for a maximum of 24 hours for clean out.
- 8. <u>Maximum Injection Pressure:</u> The maximum operating injection pressure at the well head will be four-hundred and fifty (450) psi.
- 9. <u>Mechanical Integrity Testing:</u> A mechanical integrity test will be conducted on the well annually. A pressure equal to one and one-half of the normal operating pressure will be maintained for four hours. The OCD will be notified prior to the test so that they may witness the test.

- 10. <u>Production/Injection Volumes:</u> The volumes of fluids injected (fresh water) and produced (brine) will be recorded monthly and submitted to the OCD Santa Fe Office quarterly.
- 11. <u>Well Workovers Operations:</u> OCD approval will be obtained prior to performing remedial work or any other workover. Approval will be requested at the OCD Hobbs District Office on OCD Form C-103 "Sundry Notices and Reports on Wells" (OCD Rule 1103-A).
- 12. <u>Drum Storage:</u> All drums will be stored on pad and curb type containment.
- 13. <u>Tank Berming:</u> All tanks that contain materials other than fresh water will be bermed to contain one and one-third times the capacity of the tank.
- 14. <u>Closure:</u> The OCD will be notified when operations of the facility is discontinued for a period in excess of six months. Prior to closure of the facility a closure plan will be submitted for OCD approval. Closure and waste disposal will be in accordance with the statues, rules and regulations in effect at the time of closure.

TESTING OF BRINE WELLS

XL TRANSPORTATION AND ROWLAND TRUCKING

DATE:

January 4, 1993

XL Transportation and Rowland Trucking will test their brine wells while you are down here.

They will start pressuring the cavity on January 9, 1993 and the test will start the 11th and will continue until the well is stabilized to your satisfaction.

A meeting is set up with Dale Gandy at their treating plant on the 12th at 10:00 a.m.

RE: TESTING OF BRINE WELLS

Gentlemen:

This is to confirm the test on the brine well starting January 11, 1993.

If you will pressure up on the cavity on the 9th to 50% over operating pressure and keep this pressure on it, the Oil Conservation Division (OCD) will start witnessing the test on the 11th.

Please have a 24 hour dual recorder set up on the well with one pin on the tubing side and one pin on the casing side.

Very truly yours.

Re: Unichem International, Trucker's No. 2 Brine Station Lea County, New Mexico - Discharge Permit Renewal DP-371

Dear Jerry,

After obtaining your approval, we intend to run a mechanical integrity test on our Trucker's No. 2 brine well located in Section 33, Township 185, Range 38E. We plan to close the discharge line and to use the system's triplex pump to charge the formation to approximately 425 PSI (top hole fracture pressure is 560 PSI).

When the formation stabilizes, we will install a 24-hour chart recorder and will monitor the pressure as required.

As soon as we get your approval, we will set a date and advise you before installing the recorder.

Sincerely,

- ROWLAND TRUCKING COMPANY

Cally, B _____

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission-Regulations, the following discharge plan renewal application has been submitted to the plants of the Oil Conservation Division, State Land Office Building, P.O. Box 2088, Santa Figure Mexico 87504-2088, Telephone (505) 827-5800:

(BW-15) - Unichem International, Wayne Frice, P.O. Box 1499, Hobbs, New Mexico, 88240, has submitted a renewal application for the previously approved discharge plan for their insitu extraction brine well facility. The Unichem Truckers #2 Brine Station is located in the NE/4 SW/4, Section 33, Township 18 South, Range 38 East, NMPM, Lea County, New Mexico. Fresh water is injected into the Salado Formation at an approximate depth of 2000 feet and brine is extracted with an average total dissolved solids concentrations of about 390,000 mg/l. Groundwater most likely to be affected by an accidental discharge is at a depth of 60 feet with a total dissolved solids concentration of approximately 500 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 aa.m. and 5:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and public hearing may be requested by any interested person. Requests for public hearing shall set forth the reasons why a hearing should be held., A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

GIVEN under the Seal of New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 30th day of November, 1992.

NO EFFECT FINDING
The described action will have no effect on listed species, wetlands, or other important wildlife resources.

NOTICE OF PUBLICATION

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge plan renewal application has been submitted to the Director of the Oil Conservation Division, State Land Office Building, P.O. Box 2088, Santa Fe, New Mexico 87504-2088, Telephone (505) 827-5800:

(BW-18) - Unichem International, Wayne Price, P.O. Box 1499, Hobbs, New Mexico, 88240, has submitted a renewal application for the previously approved discharge plan for their insitu extraction brine well facility. The Unichem Truckers #2 Brine Station is located in the NE/4 SW/4, Section 33, Township 18 South, Range 38 East, NMPM, Lea County, New Mexico. Fresh water is injected into the Salado Formation at an approximate depth of 2000 feet and brine is extracted with an average total dissolved solids concentrations of about 390,000 mg/l. Groundwater most likely to be affected by an accidental discharge is at a depth of 60 feet with a total dissolved solids concentration of approximately 500 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 aa.m. and 5:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and public hearing may be requested by any interested person. Requests for public hearing shall set forth the reasons why a hearing should be held., A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

GIVEN under the Seal of New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 30th day of November, 1992.

RE: Discharge Plan BW-18 (formerly DP-371)

Unichem International, Trucker's #2 Brine Station

Lea County, New Mexico

Dear Mr. Brakey:

On July 19, 1988, the ground water discharge plan, BW-18 for the Unichem International Inc., Trucker's #2 Brine Station located in Section 33, Township 18 South, Range 38 East, NMPM, Lea County, New Mexico, was approved by the Director of the Environmental Improvement Division (EID). This discharge plan was required and submitted pursuant to Water Quality Control Commission (WQCC) regulations and was approved for a period of five years. The approval will expire on July 19, 1993. Please note the new discharge plan number (BW-18), formerly DP-371, which will be the permanent designation used in all future correspondence.

If your facility continues to have potential or actual effluent or leachate discharges and you wish to continue operations, you must renew your discharge plan. The OCD is reviewing discharge plan submittals and renewals carefully and the review time can often extend for several months. Please indicate whether you have made, or intend to make, any changes in your discharge system, and if so, please include these modifications in your application for renewal. To assist you in preparation of your renewal application, I have enclosed an application form and a copy of the OCD's Guidelines for the Preparation of Ground Water Discharge Plans at Brine Extraction Facilities, revised May 1991, and a copy of the Water Quality Control Commission Regulations.

Mr. Richard Brakey October 6, 1992 Page 2

Note that the completed and signed application form must be submitted with your discharge plan renewal request.

If you no longer have any actual or potential discharges a discharge plan renewal is not needed, please notify this office. If you have any questions, please do not hesitate to contact Kathy Brown at (505) 827-5884.

TRUCKERS #2 WELL FILE

- 7-24-91 Rigged up DA&S and pull 2 3/8" tubing. Pulled 63 joints and a piece 2,011'. Left 86' in the well. Ran an impression block back in the well on the end of the tubing and pulled back out. 5 1/2 " casing parted at 1,916' and at 2,026'. Shut down for the day.
- 7-25/91 Picked up overshot and 2 7/8" work string and went in the hole. Could not get to the tubing. Pulled back out of the hole and went back in the hole with an impression block. Pulled back out of the hole and looked at impression block. Go back in the hole with drill collars and 4 1/4" swedge. Swedged casing out about 4' at 2,026'. Pulled out of the hole and laid down the 4 1/4" swedge and picked up 4 3/4" swedge. Swedged casing out to same spot ~ 2,026'. Pulled out of the hole and shut down.
- 7-26-91 Go in the hole with 4 1/2" impression block. When to 2,165' and hit something. This is 139' past where we were at 2,026. Pulled out of the hole. Tubing was dragging coming out. Had 6 badly bent joints of tubing. Go back in the hole to 1,868' with a packer and tested the casing to 500# for 30 minutes. Lost 30# in that time frame. Pulled out of the hole with the packer and 2 7/8" tubing. Laid all the 2 7/8" tubing down. Laid collars down and started back in the hole with the 2 3/8" tubing. Shut down for the day.
- 7-27-91 Finished going in the hole and started drilling with 4 1/2" blade bit with cutright on it. Drilled 4' and bit torqued up. Could go in the hole, but could not turn the tubing. Pulled out of the hole had 2 joints of bent pipe. Shut down for the day.
- 7-28-91 Shut down.
- 7-29-91 Picked up 2 7/8" tubing and tapered mill. Went in the hole and started to mill at 2,021'. Milled to 2,051'. Worked tapered mill in and out of the casing or tight spot with tubing turning. Stopped turning tubing and went down about 15' to 20'. No trouble going down, but could not turn the tubing. Pulled out of the hole. The bottom 2 joints were bent. Shut down for the day.
- 7-30-91 Ran all the 2 3/8" tubing in the hole out of the derrick and came out laying it down on the rack. Put 4 1/2" bit on 2 7/8" tubing and went in the hole to 2,026' and started drilling. Drilled to 2,116' and shut down for the day.

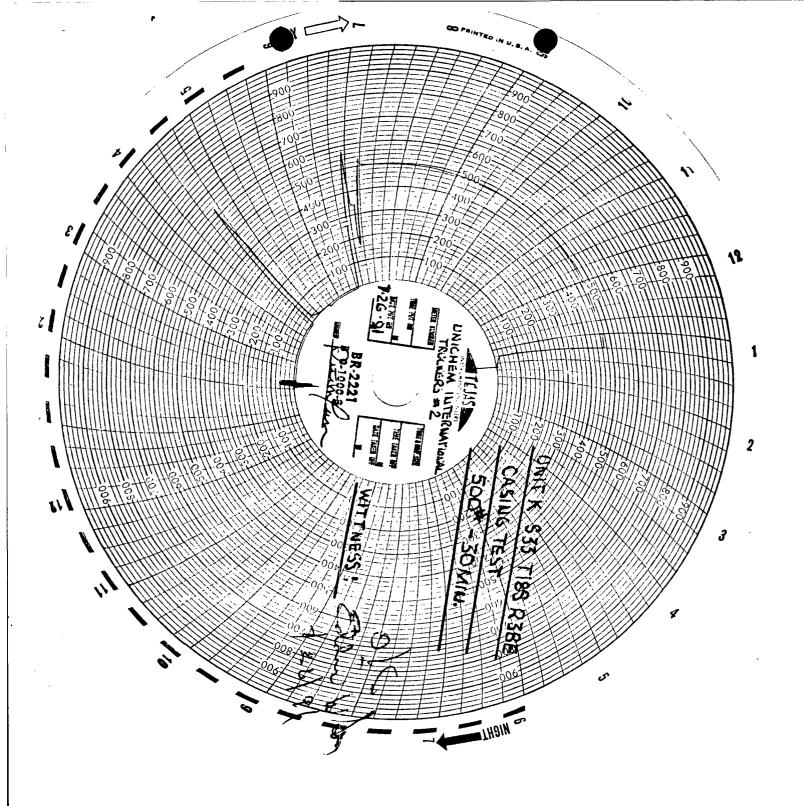

- 7-31-91 Bleed pressure off tubing and started up reverse pump. No problems. Kicked swivel in no torque on tubing. Started drilling. Drilled to 2,141' and shut down to make a connection, could not had pressure on tubing. Back flowed well for 4 1/2 hours. Sent crew home and continued to back flow well. Checked well at 4:00 pm still flowing. Checked well at 8:00 pm had stopped flowing.
- 8-01-91 Picked up a joint of tubing and started to drill. Drilled down to 2,173.9'. There is 71 joints of 2 7/8" tubing and a 4 1/2" bit in the well. Release all equipment.

The well has 345° of 9 5/8" surface casing. The well was drilled to 3,175° and plugged back to 2,935°. It was then perforated at 2,060° to 2,070° with 20 holes and 2,400° to 2,410° with 20 holes. There was a packer set at 2,100° (Baker Loc Set).

The tubing and casing was knocked loose at 1,915' and 2,026', that is known. No trouble to go through the spot at 1,916'. Had trouble at 2,026' getting out of casing.

 - (3) Not applicable.
- C. (1 & 2) Requirement noted and complied with. Please refer to Exhibit #10.

5-209 PLUGGING AND ABANDONMENT:

Unichem International will abide by all of the requirements set forth in Section 5-209 where applicable and will seek approval from the EID on this matter. Please refer to the Blanket Plugging Bond (Surety Bond) in Exhibit #3.

5-210 INFORMATION TO BE CONSIDERED BY THE DIRECTOR:

- A. Noted for in situ extraction wells.
- B. (1) The information required in Part III, Sections 3-106C (1-8) has been provided under the original discharge plan submitted to the OCD. This information is also contained in Exhibit #1.
 - The applicable area of review is set forth in Exhibit #4.

 Please note that there are no known springs, mines, quarries, or surface bodies of water within the area of review. With respect to the general location of residential properties and roads, page three of the OCD discharge plan in Exhibit #1 includes a map of Hobbs and the area of review for reference purposes.

There are eight possible water wells within the area of review currently listed by the State Engineer's office.

Truckers #2 Brine Station

These wells are shown and marked with a highlighter in Exhibit #5. The eight wells listed are all domestic wells and within the city limits of Hobbs, New Mexico; therefore, due to city ordinance, the wells have probably been abandoned.

- (3) Refer to Exhibit #6 for a complete tabulation of the data available on all wells within the area of review. These 11 wells are under jurisdiction of the New Mexico OCD and are subject to OCD testing requirements. The required annual testing procedure includes a Bradenhead test, while a mechanical integrity test is performed every three years—the test records are available upon request.
- (4) Noted for in situ extraction wells.
- (5) Important fresh water (sands) appears to go to a depth of 200', with the primary ground water being the ogalalla aqui-

fer found as shallow as 60'in the area of review.

Any potential usage ground water between 200' and the injection zone of 2,000' has not been identified at this time. Ground water in this area generally flows down-gradient from NW to SE. A map and cross-section can be provided if deemed necessary.

- (6) There are no known faults, nor are any suggested from the investigation. Again, a map and cross-section can be provided if deemed necessary. The geological structure can be interpreted from the various well logs on file and listed in Exhibit #6.
- (7) Generalized maps and cross-sections illustrating the regional geologic setting can be provided to the New Mexico EID upon request.
- (8a) The average injected fluid is 745 bbl/day over a six-year time span. The maximum injected fluid rate possible is 128 bbl/hour or 3,072 bbl/day, which represents the injection pump capability. Refer to Exhibit #9, which represents a summary of the injection volumes.
- (8b) The average injection pressure varies from 275 psig to 400 psig, with the maximum injection pressure experienced to date being 450 psig. Refer to Exhibit #9.
- (8c) The injection fluid is fresh water obtained from the City of

Truckers #2 Brine Station

- Hobbs, New Mexico. Chemical analysis of the injection fluid utilized will be made available upon request.
- (9) This requirement is duly noted and compliance is agreed to as deemed necessary.
- (10) Generally, fresh water is pumped down the casing through perforations at approximately 2,060' and the water is then mixed in an underground cavern created by continual injection of fresh water. The brine is returned through the tubing at approximately 2,400' and pumped to the surface. The pressure increases when salt builds up at the perforations, resulting in blockage.
- (11) A proposed stimulation program consists of reversing the 77 flow in order to clear any salt blockage.
- (12) Actual injection procedures consist of pumping fresh water down the casing and producing brine out of the tubing, interspersed with short periods of reversal to clear lines of salt blockage.
- (13) Please refer to page two of Exhibit #1, which is a surface plot plan; to page 4, which is a subsurface well schematic; and to Exhibit #6a, which details the well history.
- (14) Not applicable, since this permit is for renewal and not for construction.
- (15) The contingency plan for Truckers #2 Brine Station will include daily monitoring of the system. Should a potential problem occur, the system will be shut down and necessary repairs implemented in order to be in proper compliance.

It shall also include notification in accordance with the EID requirements, accompanied by restitution for any damaged ground water deemed to be the responsibility of Unichem International.

An additional aspect of the contingency plan shall consist of an updated plugging and abandonment procedure to include provision of all required bonds.

Unichem International will provide a more-detailed description of its contingency plan in accordance with Water Quality Control Commission guidelines at the request of the EID.

(16) This requirement is duly noted and compliance agreed to.
Unichem International will submit additional material as

Truckers #2 Brine Station

deemed necessary.

- (17) This requirement is duly noted and compliance agreed to--please refer to Exhibit #3.
- C. (1-7) Requirements noted and complied with in this submittal.

5-300 INJECTION WELL NOTIFICATION REQUIREMENT:

- A. The requirement in this section is duly noted and the information indicated is currently on file with the EID.
- B. This statement has been duly noted and compliance is agreed to.

Truckers # 2 Brine Station

Wayne Price Unichem International P. O. Box 1499 Hobbs, NM 88240

Dear Mr. Price:

Thank you for your cooperation and assistance during our pressure test of Unichem #2 on March 7th.

This pressure test was performed in partial fullfillment of the mechanical integrity requirements found in Part 5-204 of the New Mexico Water Quality Control Commission Regulations. Results showed no leakage from Unichem #2.

If you have any questions, please feel free to call me at 827-0027.

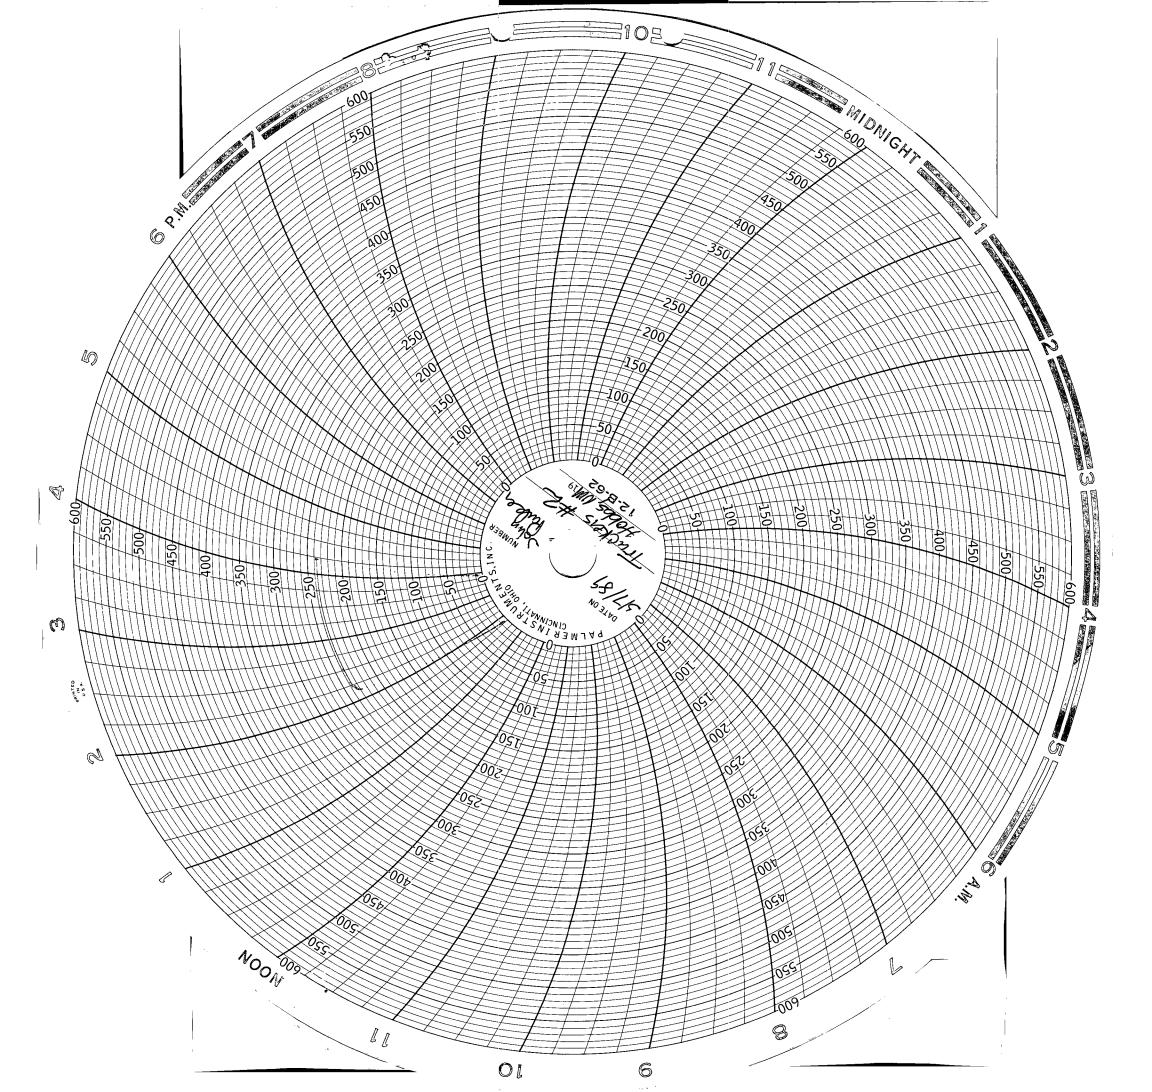

Sincerely,

John Parker

CERTIFIED MAIL - RETURN RECEIPT REQUESTED

July 19, 1988

James H. Brutton, President Unichem International, Inc. P.O. Box 1499 Hobbs, NM 88240

RE: Approval of DP-370 and DP-371

Dear Mr. Brutton:

Pursuant to the Settlement Agreement entered into by Unichem International, Inc. (Unichem) and the Environmental Improvement Division (EID) on February 24, 1988, as amended May 5, 1988, EID has reviewed all financial assurance materials submitted by Unichem, and hereby certifies that it has found these financial assurances to be adequate. This terminates Unichem's obligations under the Settlement Agreement.

The applications for renewal of discharge plans DP-370 and 371 for Trucker's #1 and Trucker's #2 respectively in Lea County, New Mexico are hereby approved. The approved discharge plan renewals consist of the materials dated September 17, and 22, 1987; December 22, 1987; March 17, 1988; May 5, 1988, May 17, 1988; June 6, 1988; June 29, 1988; June 30, 1988; and July 7, 1988, plus the information and materials submitted as part of the original discharge plan approved December 18, 1982.

The discharge plan renewal applications were submitted pursuant to Section 3-106 of the New Mexico Water Quality Control Commission Regulations. It is approved pursuant to Section 3-109. Please note Subsections 3-109.E. and 3-109.F., which provide for possible future amendment of the plan. Please be advised that the approval of this plan does not relieve you of liability should your operation result in actual pollution of surface or ground waters which may be actionable under other laws and/or regulations.

Monitoring and reporting shall be as specified in the discharge plan and supplements thereto. These requirements are summarized on the attached sheets. Any inadvertent omissions from this summary of a discharge plan monitoring or reporting requirement shall not relieve you of responsibility for compliance with that requirement.

JAMES H. BRUTTON July 19, 1988 Page 2.

Pursuant to Subsection 3-109.G.4., these plan renewals are for a period of five years. This approval will expire July 18, 1993, and you should submit an application for a new approval in ample time before that date.

On behalf of the staff of the Ground Water Section I wish to thank you for your cooperation during these discharge plan reviews.

\$incerely,

Michael Burkhart

Director

SUBJECT:

Truckers #2 Brine Station - Hobbs, New Mexico

Discharge Plan Submittal #4

Dear Mr. Parker:

The information contained herein is provided in response to your verbal request of 21 December for clarification regarding Comment No. 7 as addressed in Unichem's Discharge Plan Submittal #3 of December 15, 1987.

Comment No. 7:

Unichem International needs to submit a plugging and abandonment plan for our review. This plan should also include decommissioning of surface facilities. Copies of the blanket plugging/surety bonds submitted for Truckers #1 and #2 (Exhibits 6 and 3 respectively) have been forwarded to our Legal Bureau for review. Please submit documentation that demonstrates the \$50,000 sum of each bond is adequate to properly plug and abandon the brine wells (5-209.A.).

Clarification regarding Response of December 11, 1987:

Plugging and Abandonment Plan: A bridge plug will be set at the top of the salt formation and 200' of cement will be poured into the well casing, constituting a 200' plug to begin at the top of the salt formation (approximately 1,950' above sea level) and to extend upward approximately 200'.

Another bridge plug will be set approximately 50' below the Ogallala formation (approximately 3,375' above sea level), to extend upward to the surface of the

Mr. John Parker Page Two December 22, 1987

well casing. This plug will have a minimum depth of 262'. A P&A marker will then be set at the surface, which represents an approximate ground level elevation of 3,637' above sea level. Please note that the elevation measurements provided herein were obtained from the cross section geology map B-B' previously submitted in Exhibit #2-3 of Submittal #3.

<u>Decommission of Surface Facilities</u>: The surface facilities will be removed as outlined in the Detailed Estimate previously provided in our response to Comment No. 7, Submittal #3.

Documentation regarding Adequacy of Blanket Plugging/Surety Bond: Please note that the removal documentation provided in the Detailed Estimate referenced above also provides information demonstrating that the \$50,000 Blanket Plugging/Surety Bond is adequate to cover the costs that would be incurred in the event that plugging and abandonment is required.

Unichem International is very interested in completing the process for obtaining a discharge plan permit for Truckers #2. Therefore, if any additional information for permitting is required, please contact me immediately so that we can take the necessary action to comply.

Sincerely,

UNICHEM INTERNATIONAL INC.

November 2, 1987

Wayne Price Unichem International P.O. Box 1499 Hobbs, NM 88240

Dear Mr. Price:

The Environmental Improvement Division (EID) Ground Water Section has completed review of Unichem International's September 17 and 22, 1987 submittals for renewal of discharge plan numbers 370 and 371 respectively. The comments and additional information requested herein apply to both facilities unless designated otherwise. As correctly stated in your cover letters to the previously referenced submittals, the focus of our review for both brine well renewals is on conformance to Part V of the Water Quality Control Commission (WQCC) Regulations.

Comments and informational requests are itemized as follows (WQCC regulatory reference follows in parenthesis):

- 1. The Discharge Plan Signatory Requirement (Exhibit 11) lacks the certification: "I certify under penalty of law ..." which should precede signature. (5-101.H.2).
- 2. The number of water wells within the area of review, and the status of these wells is difficult to determine for the Truckers #1 Brine Station. There appears to be more than two wells listed in Exhibit 8, however the penciled-in legend at the top of the page states that the two wells are listed twice, even though the location for at least one of the wells listed is different. Please clarify (5-203.A).
- 3. In order to determine existence of possible conduits for fluid movement, an integral aspect of the Part V MIT requirements, Unichem International must commit to performing a cement bond log at some point during the five year renewal period (5-204.B.2 and 5-205.A.4.b.).
- 4. Unichem International needs to make a commitment to notify this office "prior to commencement of drilling, cementing and casing, well logging mechanical integrity tests and any other well workover ..." (5-205.A.5).

Wayne Price November 2, 1987 Page 2

- 5. Please provide a comparison of fracture pressure for salt at injection interval (approximately 2,100 feet) with the down-hole pressure resulting from the maximum operating pressure (300 psi for Truckers #1, 450 psi for Truckers #2) (5-206.A.1.).
- 6. Please provide a letter of authorization for Wayne Price so as to comply with report signatory requirements (5-208.C.1.).
- 7. Unichem International needs to submit a plugging and abandonment plan for our review. This plan should also include decommissioning of surface facilities. Copies of the blanket plugging/surety bonds submitted for Truckers #1 and #2 (Exhibits 6 and 3 respectively) have been forwarded to our Legal Bureau for review. Please submit documentation that demonstrates the \$50,000 sum of each bond is adequate to properly plug and abandon the brine wells (5-209.A.).
- 8. Maps submitted for Truckers #1 and #2 depicting area of review lack reference scale. Please submit maps including scales and with the $\frac{1}{4}$ mile area of review drawn in (5-210.B.2.).
- 9. Please provide maps showing vertical and horizontal limits of all ground water having less than 10,000 mg/l TDS (5-210.B.5.). Also, we need water quality information for water-bearing formations penetrated by brine well (3-106.C.3.).
- 10. Please provide generalized and specific maps and cross-sections depicting both the regional and site-specific geology (5-210.B.6 and 7).
- 11. Please provide a detailed contingency plan which at a minimum address: surface spills of brine and loss of mechanical integrity in the injection well (5.210.B.15).
- 12. The chemical analysis of samples taken from the Trucker #2 monitor sump (Exhibit 7) indicates an exceedance of the 3-103 standards for magnesium, chloride and TDS. Please explain what has caused the violation of the standards and what plans you have to prevent further contamination.

Should you have any questions, please feel free to contact Mr. Kevin Lambert (827-2902) or myself (827-0027).

Sincerely,

Nohn Parker

MEMORANDUM

TO:

Louis Rose, HED Office of General Counsel

FROM:

John Parker, Ground Water Section

SUBJ:

Review of Blanket Plugging Bonds for Brine Wells

DATE: October 30, 1987

The Ground Water Section's Underground Injection Control (UIC) program is working on discharge plan renewal for the first two of eight brine well facilities due to expire in 1987. All eight facilities were initially permitted by the Oil Conservation Division (OCD) and now must comply with the requirements of Part V of the WQCC regulations. Renewals conducted by former UIC staffers involved substantail changes to the terms of the bond (see attached September 17, 1985 correspondence from Page Morgan). However, my reading of 5-210.B.17 is that the existing bonds posted to the OCD are at least in that respect adequate.

(DP-222) TAOS PHOTOGRAPHIC LABORATORY, J. Gordon Adams, Owner, P.O. Box 2446, Taos, New Mexico 87571, proposes to renew previously approved discharge plan (DP-222) which allows for the discharge of 1400 gallons per day of photographic processing washwater onto 2 acres of land and an intermittent flow of processing solutions into a fiberglass holding tank to be periodically emptied by a commercial service. The discharge site is located 1.4 miles west of Taos in Section 18, T25N, R13E, Taos County, New Mexico. Groundwater below the site is at a depth of 3 feet and has a total dissolved solids concentration of 305 mg/l.

(DP-232) TAOS, TOWN OF, The Honorable Lawrence A. Santistevan, Mayor, P.O. Drawer M, Taos, New Mexico 87571, proposes to modify the public notice published on or before April 10, 1987. The modification consists of changing the sludge application site to 32 acres adjacent to the previously used site to the south and southwest.

(DP-370) TRUCKERS #1 BRINE STATION, Wayne Price, Engineer, Unichem International, 707 North Leech, P.O. Box 1499, Hobbs, New Mexico 88240, proposes to renew their approved discharge plan (DP-370) for a brine water in situ extraction well and surface facility located at Section 1, T19S, R35E, Lea County, New Mexico. The operation involves injection of fresh water into an underlying salt formation thereby dissolving the salt and forming a brine water solution which is then extracted via a production well and used for oil and gas production. The groundwater below the site is at a depth of 70 feet and has a total dissolved solids concentration of approximately 500 mg/l.

(DP-371) TRUCKERS #2 BRINE STATION, Wayne Price, Engineer, Unichem International, 707 North Leech, P.O. Box 1499, Hobbs, New Mexico 88240, proposes to renew their approved discharge plan (DP-371) for a brine water in situ extraction well and surface facility located at Section 33, T18S, R38E, Lea County, New Mexico. The operation involves injection of fresh water into an underlying salt formation thereby dissolving the salt and forming a brine water solution which is then extracted via a production well and used for oil and gas production. The groundwater below the site is at a depth of 60 feet and has a total dissolved solids concentration of approximately 500 mg/l.

Any interested person may obtain further information from the Ground Water Section, Ground Water Bureau, EID, and may submit written comments to the Director of the EID at the address given above. Prior to ruling on any proposed discharge plan or its modification, the Director of EID will allow thirty (30) days after the date of publication of this Notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for public hearing shall set forth the reasons why the hearing should be held. A hearing will be held if the Director determines that there is significant public interest.

OCTOBER 5, 1987

TO BE PUBLISHED ON OR BEFORE OCTOBER 14, 1987

PUBLIC NOTICE NEW MEXICO ENVIRONMENTAL IMPROVEMENT DIVISION

Notice is hereby given that, pursuant to New Mexico Water Quality Control Commission Regulations, the following proposed discharge plans have been submitted for approval to the Director of the New Mexico Environmental Improvement Division, P.O. Box 968, Santa Fe, New Mexico 87504-0968; telephone 827-2900.

(DP-520) ALBUQUERQUE UTILITIES CORPORATION, Mr. Raymond Lucero, 4300 Sara Road, Rio Rancho, New Mexico 87124, proposes to discharge 29,000 gallons per day of domestic and commercial sewage to a lined, aerated lagoon located at T12N, R2E, Section 11, Sandoval County. The treated sewage will then be land applied to 14 acres of undeveloped rangeland approximately 1 mile from the lagoon. The estimated total nitrogen content of the discharge is 32 mg/l. The depth to groundwater in this area is 625 feet with a total dissolved solids content of 250 mg/l.

(DP-471) KIT CARSON CHILE PROCESSING PLANT, Nick and Rena Carson, Owners, P.O. Box 101, Rincon, New Mexico 87940, propose to modify their previously approved discharge plan for the disposal of 35,000 gallons per day of chile wash water to five acres of cropland. The facility is located in the NE $\frac{1}{4}$ of the SE $\frac{1}{4}$ of Section 7, T19S, R2W, NMPM in Dona Ana County. The proposed modification requests that the groundwater monitoring frequency be reduced from biweekly during the months of September to January and monthly during the months of February to August to a frequency of three times per year (August, November and February). The groundwater most likely to be affected is at a depth of approximately 15 feet with a total dissolved solids content of approximately 4000 mg/l.

LAS CRUCES, THE CITY OF, D. Craig Andrews, Associate Director of Wastewater, P.O. Drawer CLC, Las Cruces, New Mexico 88004, proposes to renew the approved discharge plan for the disposal of digested municipal sludge. The current flowrate is 35,000 gallons per day with a 2% solids content. The design flowrate is 61,200 gpd at 4% solids. The sludge is land applied in T23S, RIW, Section 25, SE½, NMPM in Dona Ana County. The groundwater most likely to be affected is at a depth of approximately 300 feet with a total dissolved solids content of approximately 700 mg/l.

(DP-519) LOVELACE I.T.R.I., J.J. Thompson, P.O. Box 5890, Albuquerque, New Mexico 87185, proposes to continue discharging approximately 35,000 gallons per day of liquid waste from their Biomedical Research Laboratory and Animal Housing facility to a system of six lagoons. This discharge consists of the following: kennel washwater (15%), cage washwater (15%), sewage from restrooms, lab sinks, and cafeteria (20%), mechanical (pump cooling and sealing) and boiler and cooling tower blowdown (50%). The discharge has between 60 and 90 mg/l Nitrate (as NO₃) and is located at T8N, R4E, Section 3 in Bernalillo County. The depth to groundwater in this area is approximately 60 feet with a total dissolved solids content of 870 mg/l.

Dear Kevin,

SUBJECT:

TRUCKERS #2 BRINE STATION

BROADWAY PLACE - HOBBS, NEW MEXICO

Please find enclosed an integrity well test performed on our brine well located at Broadway Place in Hobbs. Please accept this as the first portion of our required application for a discharge plan under the new requirements to become effective in 1988.

For your information, we will be submitting a more-detailed plan for the brine well in the future. In the meantime, I believe that you should already have some information on hand from the Oil Conservation Division for Truckers #2. Would you please provide me with some sort of indication as the extent of the information that you do have available? This would greatly assist us in our efforts.

If you have any questions, please do not hesitate to contact me.

Sincerely,

UNICHEM INTERNATIONAL INC.

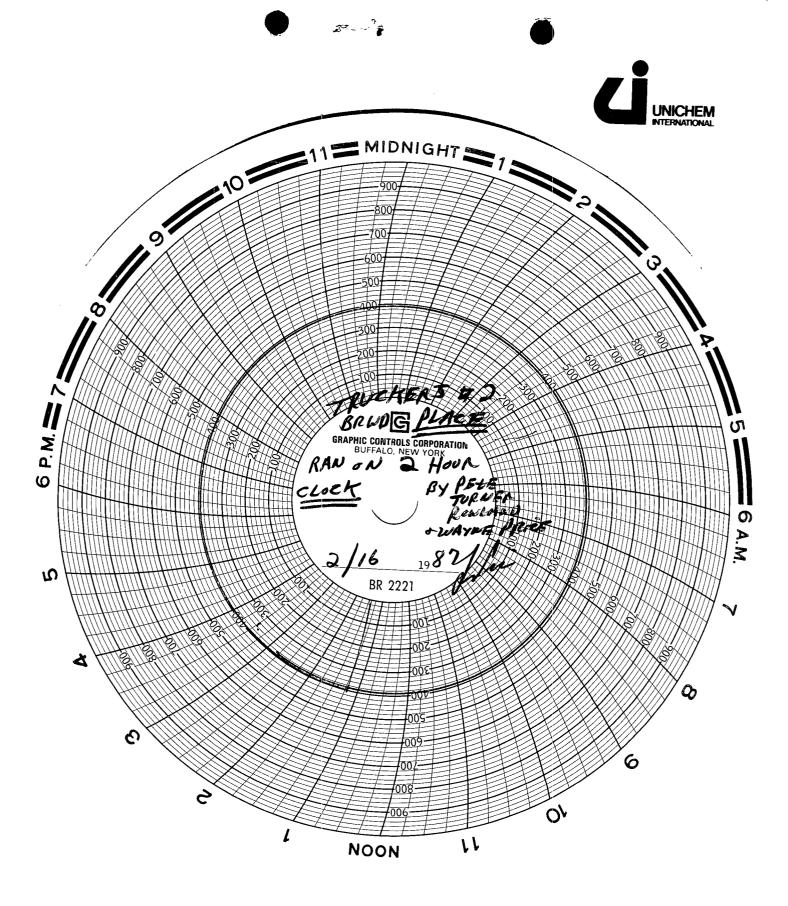

Wayne Price Staff Engineer

Paige Grant Morgan Water Resource Specialist State of New Mexico Environmental Improvement Division P.O. Box 968 Santa Fe, New Mexico 87504-0968

RE: Unichem's Truckers Brine Well No. 2

Dear Paige:

Regarding your letter of November 14, 1985 to Richard Brakey, the surface inspection of Unichem's Truckers Brine Well No. 2 by the EID on that date showed the existence of oily waste on the surface near the sump. This contamination has now been removed, and we have made a point to adjust our maintenance schedule to prevent this from reforming.

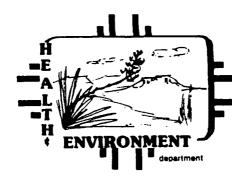

Sincerely,

UNICHEM INTERNATIONAL INC.

Wayne Price Staff Engineer

Richard Brakey Unichem International P.O. Box 1499 Hobbs, New Mexico 88240

Re: DP-371

Dear Mr. Brakey:

On a surface inspection of Unichem's Truckers Water Company Brine Well #2 on November 11, 1985, I noted that the sump intended to capture spillage during truck loading had overtopped, causing oily waste to flow onto the surface. Please remove the surface contamination as soon as possible and adjust your maintenance schedule so that the fluid level in the sump is checked often, so as to prevent a repetition of the problem. This request constitutes the EID's attempt to obtain your voluntary compliance with the New Mexico Water Quality Control Commission (WQCC) regulations at this facility.

You will soon be receiving a separate letter regarding serious violations of the state's ground water protection regulations at your Carlsbad brine facility.

Sincerely,

Paige Grant Morgan

Water Resource Specialist

NOTICE OF PUBLICATION STATE OF NEW MEXICO ENERGY AND MINERALS DEPARTMENT OIL CONSERVATION DIVISION SANTA FE, NEW MEXICO

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following proposed discharge plan has been submitted for approval to the Director of the Oil Conservation Division, P. O. Box 2088, State Land Office Building, Santa Fe, New Mexico 87501, telephone (505) 827-3260.

UNICHEM INTERNATIONAL, P. O. Box 1499, Hobbs, New Mexico 88240, telephone (505) 393-7751, requests approval of their discharge plan for their four brine in situ extraction wells and facilities located in Section 3, Township 22 South, Range 37 East, NMPM, Lea County, New Mexico; Section 33, Township 18 South, Range 38 East, NMPM, Lea County; Section 3, Township 22 South, Range 37 East, NMPM, Lea County; Section 36, Township 22 South, Range 26 East, NMPM, Eddy County, New Mexico. Unichem injects water down each injection well to an underlying salt formation thereby dissolving the salt to form a brine water solution with a total dissolved solids content of approximately 300,000 mg/L. Unichem extracts and sells the brine water solution to various companies for use in oil and gas production.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the Director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

GIVEN Under the Seal of the New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 12th day of November, 1982.

RE: GWB-10

Discharge Plan

Gentlemen:

The discharge plan submitted for the brine production facility and in situ extraction well located in <u>Section 33</u>, <u>Township 18 South</u>, <u>Range 38 East</u>, <u>NMPM</u>, Lea County, New Mexico, is hereby approved.

The discharge plan was submitted pursuant to Section 3-106 of the Water Quality Control Commission regulations. It is approved pursuant to Section 109. Please note subsections 3-109.E and 3-109.F which provide for possible future amendment of the plan. Please also be advised that the approval of this plan does not relieve you of liability should your operation result in actual pollution of surface or ground waters which may be actionable under other laws and/or regulations.

Yours very truly,

JOE D. RAMEY

Director

RE: Brine Well Discharge Plan
Truckers Water Co. Brine Well #2
Sec. 33-T18S-R38E
Lea County, New Mexico

But the second of the first of the second of

Dear Sir:

Attached herewith, please find schematic drawings of our brine producing facility in the captioned location.

In explanation of the schematics, fresh water is pumped from the city line, down the $5\ 1/2$ " casing, through perforations at 2060 feet into the salt cavity at a pressure of 325#. Brine water is returned to the surface from the perforations at 2400, where it is stored in a plastic lined 11,000 barrel pit. The system is monitored functionally on a daily basis. Water quality is monitored as the need arises, and/or usually on a monthly basis. Quantity of production varies with demand. The demand over the past two years has been extremely large, and was metered at 370,000 barrels.

The surface storage facility was constructed in accordance to oil conservation commission specifications. The monitor sump is checked daily to insure against lining failure. The loading platform is designed to catch any overflow from trucks being loaded.

The ground water that could possibly be contaminated would be the ogalalla aquifer at an estimated 60 feet. To our knowledge there are no wells being produced from the aquifer in the immediate area. However, there are no doubt many wells that have been drilled to the ogalalla in the area that are no longer in use, and probably have never been suitably plugged.

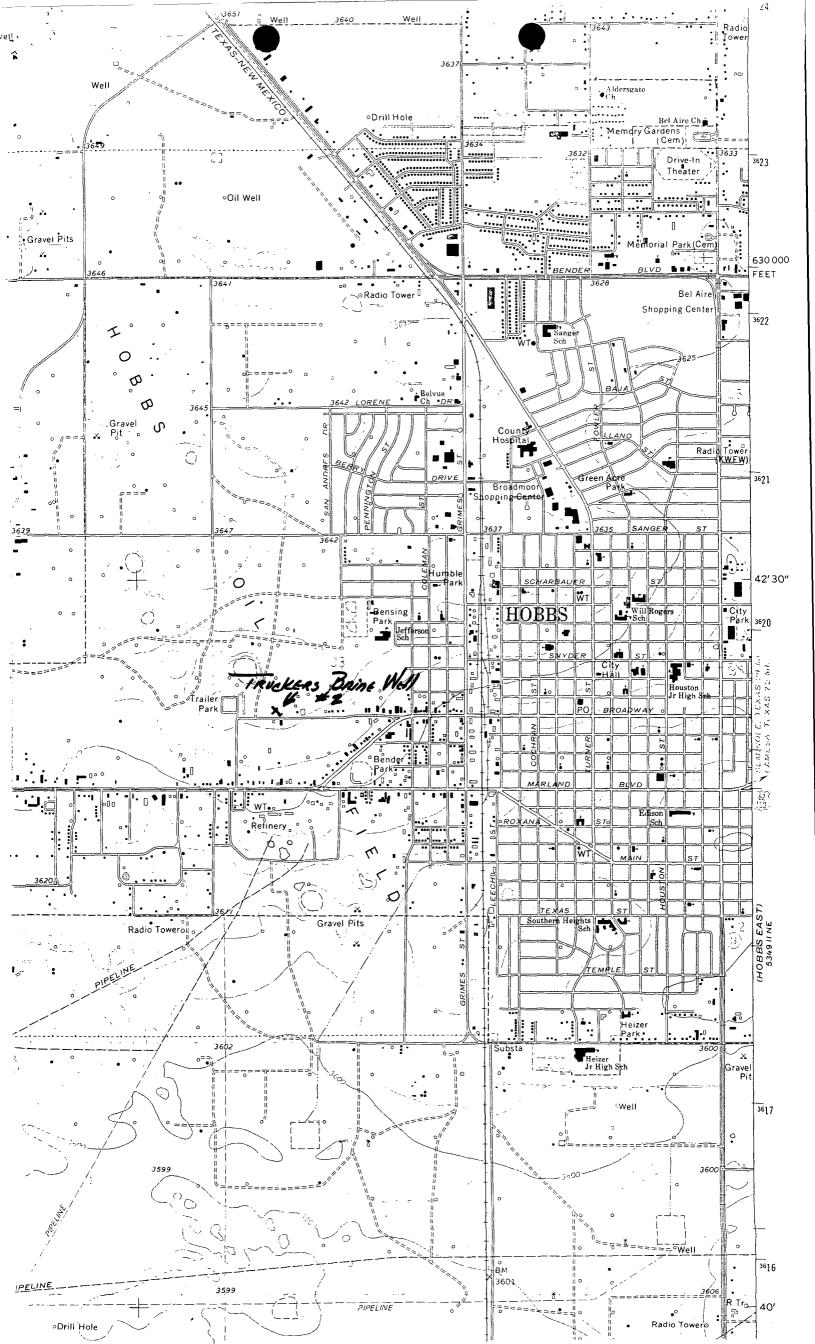

We trust this meets your requirements for a suitable discharge plan and meets with your approval.

Very truly yours

UNICHEM INTERNATIONAL INC.

KNOW ALL MEN BY THESE PRESENTS:

That Unichem International, Inc., et al.	(a partnership)
	, with its principal office in the city of
the State of New Mexico), as PRINCIPAL, and HARTFORD ACC	IDENT & INDEMNITY
corporation organized and existing under the laws of the State of	Connecticut and authorized
to do business in the State of New Mexico. as SURETY, are held firmle and benefit of the Oil Conservation Commission of New Mexico processes and the conservation of New Mexico processes are the conservation of New Mexico processes.	ly bound unto the State of New Mexico, for the use orsuant to Section 65-3-11. New Mexico Statutes
Annotated, 1953 Compilation, as amended, in the sum of Fifty Thousa	nd Dollars(\$50,000.00) lawful money of the United
States, for the payment of which, well and truly to be made, said PRIS successors and assigns, jointly and severally, firmly by these presents.	SCIPAL and SURETY hereby bind themselves, their

The conditions of this obligation are such that:

WHEREAS. The above principal has heretofore or may hereafter enter into oil and gas leases, or carbon dioxide (CO₂) gas leases, or helium gas leases with the State of New Mexico; and

WHEREAS. The above principal has heretofore or may hereafter enter into oil and gas leases, or carbon dioxide (CO₂) gas leases, or helium gas leases on lands patented by the United States of America to private individuals, and on lands otherwise owned by private individuals; and

WHEREAS, The above principal, individually, or in association with one or more other parties, has commenced or may commence the drilling of wells to prospect for and produce oil or gas, or carbon dioxide (CO₂) gas or belium gas, or does own or may acquire, own or operate such wells, or such wells started by others on land embraced in said State oil and gas leases, or carbon dioxide (CO₂) gas leases, or belium gas leases, and on lands patented by the United States of America to private individuals, and on lands otherwise owned by private individuals, the identification and location of said wells being expressly waived by both principal and surety hereto.

ROW, THEREFORE, If the above bounden principal and surety or either of them or their successors or assigns, or any of them, shall plug all of said wells when dry or when abandoned in accordance with the rules, regulations, and orders of the Oil Conservation Commission of New Mexico in such way as to confine the oil, gas, and water in the strata in which they are found, and to prevent them from escaping into other strata;

THEN, THEREFORE, This obligation shall be null and void; otherwise and in default of complete compliance with any and all of said obligations, the same shall remain in full force and effect.

PROVIDED, HOWEVER, That thirty (30) days after receipt by the Oil Conservation Commission of New Mexico of written notice of cancellation from the surety, the obligation of the surety hereunder shall terminate as to property or wells acquired, drilled, or started after said thirty (30) day period but shall continue in effect, notwithstanding said notice, as to property or wells theretofore acquired, drilled, or started.

RE: Brine Well Discharge Plan
Truckers Water Co. Brine Well #2
Sec. 33-T18S-R38E
Lea County, New Mexico

Dear Sir:

Attached herewith, please find schematic drawings of our brine producing facility in the captioned location.

In explanation of the schematics, fresh water is pumped from the city line, down the $5\ 1/2$ " casing, through perforations at 2060 feet into the salt cavity at a pressure of 325#. Brine water is returned to the surface from the perforations at 2400, where it is stored in a plastic lined 11,000 barrel pit. The system is monitored functionally on a daily basis. Water quality is monitored as the need arises, and/or usually on a monthly basis. Quantity of production varies with demand. The demand over the past two years has been extremely large, and was metered at 370,000 barrels.

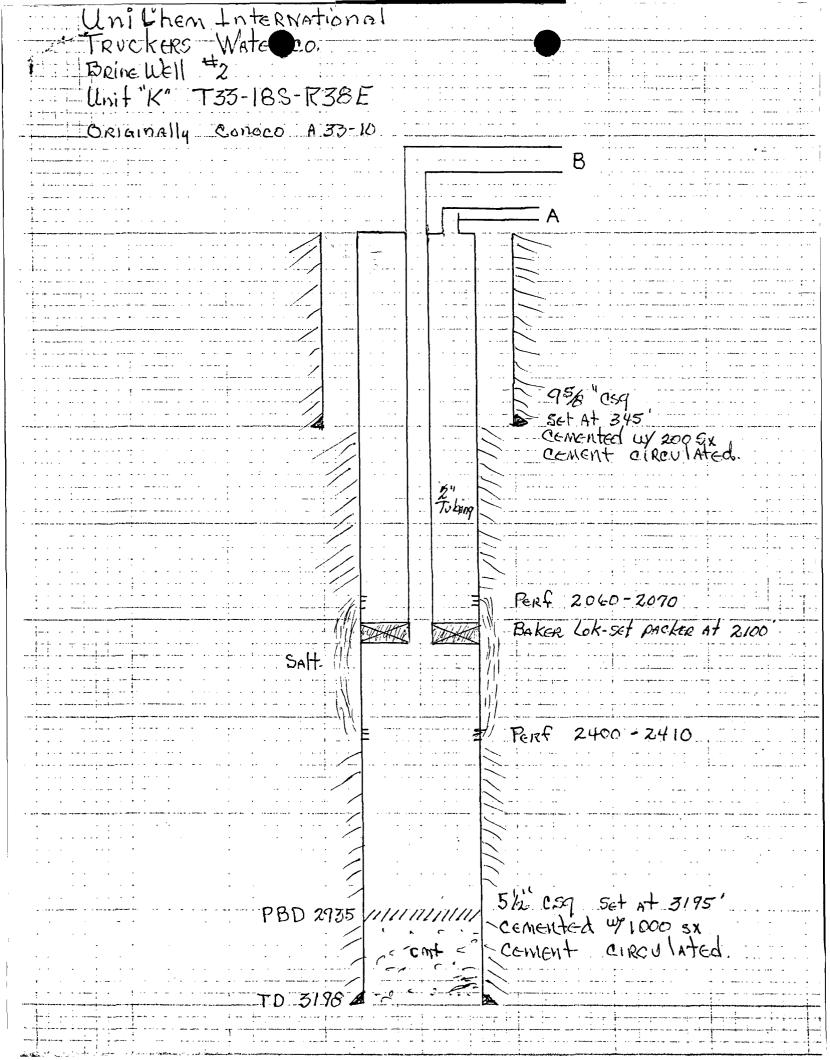

The surface storage facility was constructed in accordance to oil conservation commission specifications. The monitor sump is checked daily to insure against lining failure. The loading platform is designed to catch any overflow from trucks being loaded.

The ground water that could possibly be contaminated would be the ogalalla aquifer at an estimated 60 feet. To our knowledge there are no wells being produced from the aquifer in the immediate area. However, there are no doubt many wells that have been drilled to the ogalalla in the area that are no longer in use, and probably have never been suitably plugged.

We trust this meets your requirements for a suitable discharge plan and meets with your approval.

Very truly yours,

UNICHEM INTERNATIONAL INC.
