Annual Ground Water Monitoring Report

Targa Midstream Services, L.P.

Monument Gas Plant (GW-025)

Lea County, New Mexico

1.0 INTRODUCTION

Targa Midstream Services, L.P. ("Targa"), successor company to Dynegy Midstream Services, L.P., has retained Larson and Associates, Inc. ("LA") to perform quarterly (4 times per year) ground water monitoring at its Monument Gas Plant ("Facility") located approximately 2.6 miles southeast of Monument, New Mexico. The Facility operates under New Mexico Oil Conservation Division ("OCD") Ground Water Discharge Plan GW-025 and is located in Unit Letter N ("SE/4, SW/4"), Section 36, Township 19 South, Range 36 East, Lea County, New Mexico. Figure 1 presents a location and topographic map. Figure 2 presents a Facility drawing.

On March 5, 1998, the OCD approved a request to modify the Facility's ground water monitoring program to include the following:

- Measure depth-to-groundwater and hydrocarbon product thickness in twelve (12) monitoring wells (WP-1, WP-2, WP-4, WP-5, WP-6, WP-7, WP-10, WP-11, WP-12, WP-13, WP-14 and WP-15) quarterly (4 times per year);
- Collect and analyze groundwater samples from six (6) monitoring wells (WP-1, WP-5, WP-6, WP-7, WP-13 and WP-14) during the second (2nd) quarter (April through June) for benzene, toluene, ethylbenzene, xylene ("BTEX"), dissolved metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver), chloride, sulfate and total dissolved solids ("TDS");
- Collect and analyze groundwater samples from three (3) monitoring wells (WP-1, WP-5 and WP-14) during the fourth (4th) quarter (October through December) for BTEX, chloride, sulfate and TDS; and
- Prepare an annual report.

2005 Annual Ground Water Monitoring Report
Targa Midstream Services, L.P., Monument Gas Plant

2.0 ADDITIONAL INVESTIGATIONS

On August 4, 2005, LA personnel supervised installation of three (3) monitoring wells (WP-16, WP-17 and WP-18) southeast (down gradient) of the Facility. The wells were installed at OCD's request to determine the extent of hydrocarbon product observed in monitoring wells WP-4R, WP-12 and WP-14. Scarborough Drilling, Inc., located in Lamesa, Texas, drilled the wells from approximately 36 to 42 feet below ground surface ("bgs") using an air rotary rig. The wells were completed using threaded 2-inch schedule 40 polyvinyl chloride ("PVC") casing and twenty (20) feet of 0.010-inch factory slotted well screen.

On August 9, 2005, ground water samples were collected from wells WP-16, WP-17 and WP-18, submitted under chain-of-custody control and preservation to Environmental Lab of Texas, Inc. ("ELTI"), located in Odessa, Texas, and analyzed for BTEX using method SW-846-8021B. Benzene was reported above the State of New Mexico Water Quality Control Commission ("WQCC") human health standard of 0.01 milligrams per liter ("mg/L") in samples WP-17 (5.28 mg/L) and WP-18 (1.03 mg/L). Toluene, ethyl benzene and xylene were below the WQCC human health standards, except for sample WP-17, which reported ethyl benzene at 1.22 mg/L. The WQCC threshold for ethyl benzene is 0.75 mg/L.

On October 7, 2005 and December 12, 2005, hydrocarbon product was observed in well WP-18 at 0.04 feet and 0.06 feet, respectively. The investigation results were submitted to OCD on November 1, 2005, with recommended integration of wells WP-16, WP-17 and WP-18 into the quarterly ground water monitoring program. The recommendation was approved on February 8, 2006.

3.0 2005 GROUND WATER MONITORING

3.1 Depth to Ground Water and Hydrocarbon Product Thickness Measurements

On April 4, 2005, October 7, 2005 and December 12, 2005, depth to ground water was

2005 Annual Ground Water Monitoring Report
Targa Midstream Services, L.P., Monument Gas Plant

measured in all wells, except wells WP-3, WP-8 and WP-9. On June 14, 2005, depth to ground water was measured in all wells, except WP-2, WP-3, WP-4, WP-4R, WP-8, WP-9, WP-10, WP-11 and WP-12. Wells WP-3, WP-8 and WP-9 are corrosion (cathodic) protection wells and could not be accessed. An electronic water level meter and interface probe, which distinguishes between water and oil, was used to measure the depth to ground water and hydrocarbon product thickness. The measurements were determined at the top of the PVC well casing and recorded in a dedicated bound field notebook. The interface probe was thoroughly cleaned between uses with a solution of distilled water and laboratory-grade detergent, and rinsed with distilled water. Table 1 presents a summary of the depth to ground water measurements.

Referring to Table 1, no significant variations in depth to ground water was observed during 2005, except an increase in depth to ground water or lowering of the aquifer approximately 3.94 feet at well WP-14. Hydrocarbon product was only observed in well WP-18 on October 7, 2005 (0.04 feet) and December 12, 2005 (0.06 feet). Depth to ground water measurements from the 2nd quarter (June 14, 2005) and 4th quarter (December 12, 2005) were used to prepare ground water potentiometric surface maps, presented as Figure 3 and Figure 4, respectively.

Referring to Figure 3, on June 14, 2005, the elevation of the ground water surface on June 14, 2005, ranged from approximately 3,556.66 feet above mean sea level ("MSL") at well WP-6 (upgradient) to 3,544.93 feet above MSL at well WP-1 (downgradient). Ground water flow was from northwest to southeast at a gradient of approximately 0.015 feet per foot. Referring to Figure 4, the elevation of the ground water surface on December 12, 2005, ranged from about 3,556.46 feet above MSL at well WP-6 (upgradient) to 3,541.01 feet above MSL at well WP-16 (downgradient). Ground water flow was from northwest to southeast at a gradient of approximately 0.01 feet per foot. No significant variations in groundwater flow or gradient was observed between current or previous events.

3.2 Ground Water Samples

On June 14, 2005, ground water samples were collected from wells WP-1, WP-5, WP-6, WP-7, WP-13 and WP-14. On August 9, 2005, ground water samples were collected from wells WP-16, WP-17 and WP-18, submitted under chain of custody control and preservation to ELTI and analyzed for BTEX. On December 12, 2005, ground water samples were collected from wells WP-1, WP-5 and WP-14. The samples were collected after the wells were purged of three (3) casing volumes of ground water using dedicated and disposable PVC bailers or slowly pumped using a low-flow pump and flow cell. Ground water was carefully transferred to laboratory prepared containers, which were labeled, chilled in an ice chest and delivered under chain of custody control to Environmental Lab of Texas, Inc. ("ELTI"), located in Odessa, Texas. ELTI analyzed samples from June 14, 2005, for BTEX, dissolved metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver), chloride, sulfate and TDS. ELTI analyzed samples from December 12, 2005, for BTEX, chloride, sulfate and TDS. Table 2 presents a summary of the BTEX analysis. Table 3 presents a summary of the dissolved metals analysis. Table 4 presents a summary of the chloride, sulfate and TDS analysis. Appendix A presents the laboratory report.

Referring to Table 2, benzene exceeded the WQCC human health standard of 0.01 mg/L in samples collected on June 14, 2005, from wells WP-1, WP-5, WP-13 and WP-14. The benzene ranged from 0.422 mg/L (WP-14) to 3.61 mg/L (WP-1). Samples collected on August 9, 2005, from wells WP-17 (5.28 mg/L) and WP-18 (1.03 mg/L) also exceeded the WQCC human health standard for benzene. Toluene, ethyl benzene and xylene were below the WQCC human health standards in all samples, except ethyl benzene in sample WP-17 (1.22 mg/L). Figure 5 presents concentrations of dissolved benzene in ground water during the second (2nd) quarter (June 14, 2005).

Benzene exceeded the WQCC human health standard of 0.01 mg/L in samples collected on December 12, 2005, from wells WP-1, WP-5 and WP-14. The benzene ranged from 0.274 mg/L (WP-14) to 6.26 mg/L (WP-5). Toluene, ethyl benzene and xylene were below the WQCC human

2005 Annual Ground Water Monitoring Report
Targa Midstream Services, L.P., Monument Gas Plant

health standards in samples WP-1, WP-5 and WP-14, on December 12, 2005. Figure 6 presents concentrations of dissolved benzene in ground water during the fourth (4th) quarter (December 12, 2005).

Referring to Table 3, barium exceeded the WQCC human health standard of 1.0 mg/L, in sample WP-1 (12.1 mg/L) collected on June 14, 2005. Chromium exceeded the WQCC human health standard of 0.05 mg/L, in samples WP-5 (0.816 mg/L) and WP-7 (0.2 mg/L) collected on June 14, 2005. Figure 7 presents the concentrations of dissolved barium and chromium reported above the WQCC human health standards in ground water during the second (2nd) quarter (June 14, 2005).

Referring to Table 4, on June 14, 2005, the background concentrations for chloride, sulfate and TDS, as reported in ground water samples from well WP-6, were 1,100 mg/L, 1,980 mg/L and 4,670 mg/L, respectively. The WQCC domestic water quality standards for chloride, sulfate and TDS are 250 mg/L, 600 mg/L and 1000 mg/L, respectively. The sample from well WP-7 was the only samples to record concentrations of chloride (10,900 mg/L), sulfate (7,310 mg/L) and TDS (15,500 mg/L) above the background concentrations. On December 12, 2005, concentrations of chloride, sulfate and TDS in samples WP-1 and WP-5 were below the background concentrations from June 14, 2005. Figure 8 presents chloride, sulfate and TDS concentrations in ground water on June 14, 2005. Figure 9 presents chloride, sulfate and TDS concentrations in ground water on December 12, 2005.

4.0 CONCLUSIONS

1. No significant variations in depth to groundwater was observed, except well WP-14, which showed an increase in depth to ground water or lowering of the aquifer approximately 3.94 feet during 2005;
2. The groundwater flow direction and gradient remains generally to the southeast at approximately 0.010 to 0.015 feet per foot. No significant variation was noted in the

2005 Annual Ground Water Monitoring Report
Targa Midstream Services, L.P., Monument Gas Plant

- direction and gradient of ground water flow;
- 3 Hydrocarbon product was only observed in well WP-18 on October 7, 2005 (0.04 feet) and December 12, 2005 (0.06 feet);
 4. Benzene exceeded the WQCC human health standard of 0.01 mg/L in groundwater samples from wells WP-1, WP-5, WP-13 and WP-14, on June 14, 2005. The benzene ranged from 0.422 mg/L (WP-14) to 3.61 mg/L (WP-1);
 5. Samples collected on August 9, 2005, from wells WP-17 (5.28 mg/L) and WP-18 (1.03 mg/L) also exceeded the WQCC human health standard for benzene;
 6. Toluene, ethyl benzene and xylene were below the WQCC human health standards in all samples, except ethyl benzene in sample WP-17 (1.22 mg/L);
 7. Benzene exceeded the WQCC human health standard of 0.01 mg/L in samples collected on December 12, 2005, from wells WP-1, WP-5 and WP-14. The benzene ranged from 0.274 mg/L (WP-14) to 6.26 mg/L (WP-5);
 8. Toluene, ethyl benzene and xylene were below the WQCC human health standards in samples WP-1, WP-5 and WP-14, on December 12, 2005;
 9. Barium exceeded the WQCC human health standard of 1.0 mg/L in sample WP-1 (12.1 mg/L) collected on June 14, 2005;
 10. Chromium exceeded the WQCC human health standard of 0.05 mg/L in samples WP-5 (0.816 mg/L) and WP-7 (0.2 mg/L) collected on June 14, 2005;
 11. The sample from well WP-7 was the only sample to record concentrations of chloride (10,900 mg/L), sulfate (7,310 mg/L) and TDS (15,500 mg/L) above the background concentrations of 1,100 mg/L, 1,980 mg/L and 4,670 mg/L, respectively, on June 14, 2005;
 12. Concentrations of chloride, sulfate and TDS in samples WP-1 and WP-5 were below the background concentrations from June 14, 2005.

5.0 RECOMMENDATIONS

Targa will continue quarterly ground water monitoring in accordance with the modified

2005 Annual Ground Water Monitoring Report
Targa Midstream Services, L.P., Monument Gas Plant

sampling schedule and integrate wells WP-16, WP-17 and WP-18 into the monitoring and sampling schedule.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
PS-1	Matrix spike recoveries were outside method and/or historical control limits due to matrix interference. Interference was confirmed by similar results from a post matrix spike.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
LCS	Laboratory Control Spike
MS	Matrix Spike
Dup	Duplicate

2004

Annual Groundwater Monitoring Report
Monument Gas Plant
Lea County, New Mexico

1.0 INTRODUCTION

Dynegy Midstream Services, L.P. ("DMS") has retained Larson and Associates, Inc. ("LA") to conduct quarterly and semi-annual groundwater monitoring at its Monument Gas Plant ("Facility") located approximately 2.6-miles southeast of Monument, in Lea County, New Mexico. The Facility is located in Unit Letter N (SE/4, SW/4), Section 36, Township 19 South and Range 36 East. Figure 1 presents a location and topographic map. Figure 2 presents a Facility drawing.

2.0 CURRENT ACTIVITIES

2.1 Depth-to-Groundwater and Hydrocarbon Product Thickness

Depth-to-groundwater and PSH was measured in all monitoring wells, except WP-3, WP-8 and WP-9, during 2004 on March 18, June 30, September 8 and December 27. The measurements were recorded using an electronic oil and water interface probe, and the probe was cleaned thoroughly between wells using a solution of distilled water and laboratory-grade detergent, and rinsed with distilled water. Measurements were not recorded from wells WP-3, WP-8 and WP-9, since these wells were modified for corrosion (cathodic) protection. The measurements were recorded at the top of the well casing, which had been previously surveyed for elevation by a New Mexico registered professional land surveyor. Table 1 presents a summary of the depth-to-groundwater and PSH measurements.

Referring to Table 1, seasonal variations in depth-to-groundwater were observed, and ranged from approximately 1.28 feet (WP-6 and WP-7) to 8.83 feet (WP-14). Groundwater was not observed in well WP-2 during the first (1st) second (2nd) and third (3rd) quarterly periods. Groundwater potentiometric surface maps were prepared from measurements collected on March 18, 2004, June 30, 2004, September 8, 2004 and December 27, 2004, and are presented on Figure 3, Figure 4, Figure 5 and Figure 6, respectively.

2004 Annual Groundwater Monitoring Report – Monument Gas Plant

Referring to Figure 3 (March 18, 2004), groundwater ranged from approximately 3,556.32 feet above mean sea level ("MSL") at well WP-6 (upgradient) to 3,538.91 feet MSL at well WP-14 (downgradient). On June 30, 2004, groundwater ranged from approximately 3,556.35 feet MSL at well WP-6 (upgradient) to 3,539.00 feet MSL at well WP-14 (downgradient). On September 8, 2004, groundwater ranged from approximately 3,556.36 feet MSL at well WP-6 (upgradient) to 3,539.81 feet MSL at well WP-14 (downgradient). On December 27, 2004, groundwater ranged from approximately 3,557.90 feet MSL at well WP-6 (upgradient) to 3,546.07 feet MSL at well WP-15 (downgradient). Groundwater flow was consistently from northwest to southeast at a gradient ranging from approximately 0.009 to 0.01 feet per foot. No significant variations in groundwater flow direction or gradient were observed between the current or previous monitoring periods.

PSH was observed in wells WP-6 (0.00 to 1.17 feet), WP-12 (0.00 to 0.16 feet) and WP-14 (0.00 to 0.08 feet). The PSH, except well WP-6, is consistent with natural gas condensate. The PSH observed in well WP-6 is consistent with crude oil from a source upgradient to the Facility. Laboratory analysis of product samples indicates that the PSH is residual from a historic release. Since 2003, DMS has recovered approximately 100 gallons of PSH from wells WP-4R, WP-12, WP-14 and WP-15 using pneumatic pumps. The PSH is pumped into drums, and processed at the Facility. No PSH was observed in the wells during the fourth (4th) quarter of 2004 and first (1st) quarter of 2005. Table 2 presents a detailed summary of PSH measurements from wells WP-4/4R, WP-6, WP-10, WP-12, WP-14 and WP-15. Figure 7 presents a control chart of the PSH thickness measurements. Referring to Figure 7, PSH thickness in wells WP-4/4R, WP-6, WP-10, WP-12, WP-14 and WP-15 has diminished to non-detectable.

2.2 Groundwater Samples

On July 1, 2004, groundwater samples from wells WP-1, WP-5, WP-7, WP-10, WP-11 and WP-13 were analyzed for benzene, toluene, ethylbenzene, xylene (collectively referred to as BTEX), dissolved metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver), chloride, sulfate and Total dissolved solids (TDS). On December 27, 2004, groundwater samples from wells

2004 Annual Groundwater Monitoring Report – Monument Gas Plant

WP-1, WP-5 and WP-14 were analyzed for BTEX, chloride, sulfate and TDS. Table 3 presents a summary of the BTEX analysis. Table 4 presents a summary of the dissolved metals analysis. Table 5 presents a summary of the inorganic (chloride, sulfate and TDS) analysis. Appendix A presents the laboratory reports.

Each well was purged to remove three (3) casing-volumes of groundwater using dedicated polyethylene disposal bailers and nylon cord. The wells were generally purged dry and allowed to recover sufficiently prior to sample collection. The purged water was placed in a portable tank and disposed with waste water from the Facility. The samples were carefully poured from the bailers into laboratory-prepared containers, labeled, chilled in an ice chest, and delivered under chain-of-custody ("COC") control to TraceAnalysis, Inc. ("Trace"), located in Lubbock, Texas. The samples were analyzed using NMOCD approved methods, and a duplicate sample was collected and analyzed for quality assurance and quality control ("QA/QC").

Referring to Table 3, benzene exceeded the State of New Mexico, Water Quality Control Commission ("WQCC") human health standard of 0.01 milligrams per liter (mg/L) in samples from wells WP-1 (1.10 mg/L), WP-5 (2.81 mg/L), WP-10 (1.98 mg/L), WP-11 (3.05 mg/L) and WP-13 (0.586 mg/L) during the July 2004 event. Concentrations of benzene exceeded the WQCC standard in samples from wells WP-1 (1.73 mg/L), WP-5 (2.74 mg/L) and WP-14 (0.199 mg/L) during the December 2004 event. The benzene concentrations were consistent with previous sample results. The toluene, ethylbenzene and xylene concentrations were below the WQCC standards during the July 2004 and December 2004 events. Figure 8 presents a Facility drawing showing benzene concentrations on July 1, 2004 and December 27 2004.

Referring to Table 4, barium was the only metal detected in the groundwater samples on July 1, 2004, and ranged from 0.049 mg/L (WP-11) to 1.71 mg/L (WP-11). The barium concentrations in wells WP-1 (1.44 mg/L), WP-5 (1.19 mg/L), WP-10 (1.71 mg/L) and WP-13 (1.19 mg/L) exceeded the WQCC human health standard of 1.0 mg/L, and were consistent with concentrations previously

2004 Annual Groundwater Monitoring Report – Monument Gas Plant

reported in samples from the wells. Figure 9 presents barium concentrations in groundwater samples collected on July 1, 2004 and December 27, 2004.

Referring to Table 5, the background concentration reported for chloride, sulfate and TDS in groundwater from well WP-6 on June 6 –7, 2002, were 1,600 mg/L, 147 mg/L and 4,410 mg/L, respectively. The WQCC has established domestic water quality standards for chloride, sulfate and TDS at 250 mg/L, 600 mg/L and 1000 mg/L, respectively. Concentrations of chloride reported in samples from wells WP-5, WP-7, WP-10, WP-11, WP-13 and WP-14 exceeded the NMWQCC standard. Chloride is generally elevated due to historic operations from a chemical plant upgradient (northwest) of the Facility. Sulfate was detected above the WQCC standard (600 mg/L) in samples from wells WP-7 and WP-14. The sulfate concentrations are consistent with results previously reported to the OCD. The concentration of TDS exceeded the WQCC domestic water quality standard (1,000 mg/L) in samples from all wells, and is likely attributed to upgradient industrial operations. Figure 10 and Figure 11 present chloride and TDS concentrations in groundwater samples, respectively, on July 1, 2004 and December 27, 2004.

3.0 CONLUSIONS

1. Slight variations in depth-to-groundwater from seasonal fluctuation were observed during 2004, and groundwater flow was generally from northwest to southeast at a gradient from 0.009 to 0.01 feet per foot.
2. PSH was observed in wells WP-6 (0.00 to 1.17 feet), WP-12 (0.00 to 0.16 feet) and WP-14 (0.00 to 0.08 feet), but diminished to non-detectable during the fourth (4th) quarter of 2004 and first (1st) quarter of 2005. Approximately 100 gallons of PSH from wells WP-4R, WP-12, WP-14 and WP-15 using pneumatic pumps.
3. The measurements indicate that PSH has been captured at the Facility boundary at locations WP-4, WP-12 and WP-14.

*MEG JMW
GRAPET Mw's*

2004 Annual Groundwater Monitoring Report – Monument Gas Plant

4. The data suggests that PSH observed in well WP-6 may be associated with an upgradient source located north of the well, and nearest potential upgradient source may be a producing oil well located about 75 feet north of well WP-6.
5. Benzene exceeded the WQCC standard of 0.01 mg/L in groundwater samples from wells WP-1 (1.10 mg/L), WP-5 (2.81 mg/L), WP-10 (1.98 mg/L), WP-11 (3.05 mg/L) and WP-13 (0.586 mg/L) during the July 2004, and wells WP-1 (1.73 mg/L), WP-5 (2.74 mg/L) and WP-14 (0.199 mg/L) during the December 2004.
6. Toluene, ethylbenzene and xylene were below the WQCC standards during June and December 2004.
7. Barium was the only detected metal, and exceeded the WQCC human health standard of 1.0 mg/L in samples from wells WP-1 (1.44 mg/L), WP-5 (1.19 mg/L), WP-10 (1.71 mg/L) and WP-13 (1.19 mg/L). The barium concentrations were consistent with results previously reported to the OCD.
8. Chloride and TDS concentrations in samples from wells WP-5, WP-7, WP-10, WP-11, WP-13 and WP-14 exceeded the WQCC standards of 250 mg/L and 1,000 mg/L, respectively. The elevated levels are likely associated with historic releases from a chemical plant located northwest (upgradient) of the Facility. The chloride and TDS concentrations are consistent with results previously reported to the NMOCD.
9. Sulfate was detected above the WQCC standard of 600 mg/L in samples from wells WP-7 and WP-14, and is consistent with results previously reported to the NMOCD.

Analytical and Quality Control Report

Cindy Crain
Larson and Associates, Inc.
P. O. Box 50685
Midland, Tx 79710

Report Date: July 26, 2004

Work Order: 4070614

Project Name: Monument Gas Plant
Project Number: 2-0108

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
38067	WP-1	water	2004-07-01	09:55	2004-07-03
38068	WP-13	water	2004-07-01	10:36	2004-07-03
38069	WP-10	water	2004-07-01	11:03	2004-07-03
38070	WP-11	water	2004-07-01	11:45	2004-07-03
38071	WP-7	water	2004-07-01	12:25	2004-07-03
38072	WP-5	water	2004-07-01	13:02	2004-07-03
38075	Dup	water	2004-07-01	00:00	2004-07-03

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 20 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

¹Changed spike amount from 0.1 to 0.2 due to prep; 2x normal surrogate amount was used.

²Changed spike amount from 0.1 to 0.2 due to prep; 2x normal surrogate amount was used/Low BFB surrogate recovery due to matrix interference. TFT surrogate recovery shows the method to be in control.

Analytical and Quality Control Report

Cindy Crain
Larson and Associates, Inc.
P. O. Box 50685
Midland, Tx 79710

Report Date: January 3, 2005

Work Order: 4122915

Project Name: Monument Gas Plant
Project Number: 2-0108

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
51676	WP-1	water	2004-12-27	00:00	2004-12-29
51677	WP-5	water	2004-12-27	00:00	2004-12-29
51678	WP-14	water	2004-12-27	00:00	2004-12-29
51679	Dup #1	water	2004-12-27	00:00	2004-12-29

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 10 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Annual Groundwater Monitoring Report
Dynegy Midstream Services, L.P., Monument Gas Plant
(GW-025)
Lea County, New Mexico

1.0 INTRODUCTION

Dynegy Midstream Services, L.P. (Dynegy) has retained Larson and Associates, Inc. (LA) to conduct quarterly and semi-annual groundwater monitoring at its Monument Gas Plant (Site) located approximately 2.6 miles southeast of Monument, New Mexico. The Site is situated in Unit Letter N (SE/4, SW/4), Section 36, Township 19 South, Range 36 East, Lea County, New Mexico. Figure 1 presents a location and topographic map. Figure 2 presents a Site drawing.

On March 5, 1998, the New Mexico Oil Conservation Division (NMOCD) established groundwater monitoring at the Site that included the following:

- Measuring depth-to-groundwater and phase-separated hydrocarbon (PSH) thickness in thirteen (13) monitoring wells on a quarterly (4 times per year) schedule;
- Collecting groundwater samples from six (6) monitoring wells (WP-1, WP-5, WP-6, WP-7, WP-13 and WP-14) during the first semi-annual sampling event (June 2002) for benzene, toluene, ethylbenzene, xylene (collectively referred to as BTEX), chloride, total dissolved solids (TDS), sulfate, and dissolved metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver) analysis;
- Collecting groundwater samples from three (3) down gradient monitoring wells (WP-1, WP-5 and WP-14) during the second semi-annual sampling event (December 2002) for BTEX, chloride, TDS, and sulfate analysis; and
- Preparing an annual report for submittal to the NMOCD.

2.0 2002 GROUNDWATER MONITORING

2.1 Depth-to-Groundwater

Depth-to-groundwater was measured in all monitoring wells, except WP-3, WP-8 and WP-9, on April 26, 2002, June 6, 2002, September 30, 2002 and December 19, 2002. Measurements were recorded using an electronic water level meter and interface probe that distinguishes between water and oil. The probe was cleaned thoroughly between wells using a solution of distilled water and

Dynegy Midstream Services, L.P., Monument Gas Plant

laboratory-grade detergent, and rinsed with distilled water. No measurements were recorded from wells WP-3, WP-8 and WP-9, since the wells area currently used for corrosion (cathodic) protection. The depth-to-groundwater was recorded at the top of the well casing which has been previously surveyed for elevation by a New Mexico registered professional land surveyor. Table 1 presents a summary of the depth-to-groundwater measurements.

Referring to Table 1, no significant variations in depth-to-groundwater was observed, except a decrease in water level from well WP-2. Groundwater was not detected in well WP-2 on September 30, 2002 and December 19, 2002, indicating that the aquifer level had decreased below the well screen. Measurements from the second quarter (June 6, 2002) and fourth quarter (December 19, 2002) were corrected for PSH, and used to prepare groundwater potentiometric surface maps. Figure 3 and Figure 4 present groundwater potentiometric surface maps for June 6, 2002 and December 19, 2002, respectively.

Referring to Figure 3, the elevation of the groundwater surface on June 6, 2002, ranged from approximately 3,556.61 feet above mean sea level (AMSL) at well WP-6 (upgradient) to 3,539.41 feet AMSL t well WP-14 (downgradient). Groundwater flow was from north-northwest to south – southeast at a gradient from about 0.011 to 0.012 feet per foot. Referring to Figure 4, the elevation of the groundwater surface on December 19, 2002, ranged from about 3,556.50 feet AMSL at well WP-6 (upgradient) to 3,539.72 feet AMSL at well WP-14 (downgradient). Groundwater flow was north - northwest to south - southeast at a gradient from 0.010 to 0.013 feet per foot. No significant variations in groundwater flow or gradient were observed between current or previous events.

2.2 PSH Thickness

PSH was measured in the wells using an electronic interface probe, and was detected in wells WP-4 (0.31 to 0.44 feet), WP-6 (0.04 to 0.30 feet), WP-10 (0.02 and 0.03 feet), WP-12 (0.22 to 0.52 feet), WP-14 (0.10 to 0.18 feet) and WP-15 (0.55 to 0.72 feet). PSH was evident in well WP-10 during the first (April 26, 2002) and second (June 6, 2002) quarterly monitoring events. The PSH

Dynegy Midstream Services, L.P., Monument Gas Plant

measurements have indicated that migration off the Site boundary may have occurred at locations WP-4, WP-12 and WP-14. The data also suggests that the PSH observed in well WP-6 might be associated with an upgradient source located north of the well. The nearest potential upgradient source may be a producing oil well located about 75 feet north of the well. Figure 5 and Figure 6 presents maps of apparent PSH thickness and distribution for June 6, 2002 and December 19, 2002, respectively.

2.3 Groundwater Samples

On June 6 – 7, 2002, groundwater samples were collected from wells WP-1, WP-5, WP-6, WP-7, WP-13 and WP-14 for BTEX, dissolved metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver), chloride, sulfate and TDS analysis. On December 19, 2002, groundwater samples were collected from wells WP-1, WP-5 and WP-14 for BTEX, chloride, sulfate and TDS analysis. Table 2 presents a summary of the BTEX analysis. Table 3 presents a summary of the dissolved metals analysis. Table 4 presents a summary of the chloride, sulfate and TDS analysis. Appendix A presents the laboratory report.

Referring to Table 2, benzene exceeded the New Mexico Water Quality Control Commission (NMWQCC) human health standard of 0.01 milligrams per liter (mg/L) in groundwater samples from wells WP-1, WP-5, WP-6, WP-13, and WP-14 during the June 2002 event. The benzene concentrations ranged from 0.012 mg/L (WP-14) to 1.93 mg/L (WP-1). Concentrations of benzene exceeded the NMWQC standard in wells WP-1, WP-5 and WP-14 during the December 2002 event, and ranged from 0.025 mg/L (WP-14) to 2.24 mg/L (WP-1). The benzene concentrations in groundwater from wells WP-1 and WP-5 indicate an increasing concentration trend over time, based on historical data. The concentrations of toluene, ethylbenzene and zylene reported in the groundwater samples were below the NMWQCC standards during the June and December 2002 semi-annual events. Figure 7 presents an isopleth map showing the distribution of benzene in groundwater on June 6 – 7, 2002.

Dynegy Midstream Services, L.P., Monument Gas Plant

Referring to Table 3, arsenic, barium and cadmium were the only metals detected in the groundwater samples on June 6 – 7, 2002. Barium was the only metal that exceeded a NMWQCC human health standard (1.0 mg/L), and was reported in samples from WP-1 (1.9 mg/L) and WP-13 (1.63 mg/L). The barium concentrations in groundwater from wells WP-1 and WP-13 are lower than data that was previously reported to the NMOCD.

Referring to Table 4, the background concentration reported for chloride, sulfate and TDS in groundwater from well WP-6 on June 6 – 7, 2002, were 1,600 mg/L, 147 mg/L and 4,410 mg/L, respectively. The NMWQCC has established domestic water quality standards for chloride, sulfate and TDS at 250 mg/L, 600 mg/L and 1000 mg/L, respectively. The concentrations of chloride reported in samples from wells WP-5, WP-7, WP-13 and WP-14 exceeded the NMWQCC standard. The chloride level in the sample from well WP-13 was below the background concentration. The sulfate concentrations reported in samples from wells WP-5, WP-7 and WP-14 exceeded the NMWQCC standard, and background. The chloride and sulfate concentrations in groundwater from wells WP-5 and WP-7 have decreased from historical levels previously reported to the NMOCD. Figure 8 presents an isopleth map showing the distribution of chloride in groundwater on June 6 – 7, 2002.

Concentrations of TDS exceeded the NMWQCC domestic water quality standard and background samples from wells WP-5, WP-7, WP-13 and WP-14. The TDS concentration in water from well WP-14 suggests that the TDS concentration has risen over time, when compared to the historical data.

3.0 CONLUSIONS

1. No significant variations in depth-to-groundwater was observed, and groundwater flow was generally north - northwest to south - southeast at a gradient from 0.010 to 0.013 feet per foot.

Dynegy Midstream Services, L.P., Monument Gas Plant

2. PSH was observed in wells WP-4 (0.31 to 0.44 feet), WP-6 (0.04 to 0.30 feet), WP-10 (0.02 and 0.03 feet), WP-12 (0.22 to 0.52 feet), WP-14 (0.10 to 0.18 feet) and WP-15 (0.55 to 0.72 feet).
3. The measurements indicated that PSH has migrated off the Site boundary at locations WP-4, WP-12 and WP-14.
4. The data suggests that PSH observed in well WP-6 may be associated with an upgradient source located north of the well, and nearest potential upgradient source may be a producing oil well located about 75 feet north of well WP-6.
5. Benzene exceeded the New Mexico Water Quality Control Commission (NMWQCC) standard of 0.01 milligrams per liter (mg/L) in groundwater samples from wells WP-1, WP-5, WP-6, WP-13, and WP-14 during the June 2000 event. Benzene exceeded the NMWQC standard in wells WP-1, WP-5 and WP-14 during the December 2002 event. The benzene concentrations in groundwater from wells WP-1 and WP-5 indicate an increasing concentration trend over time, based on historical data.
6. Concentrations of toluene, ethylbenzene and zylene in groundwater samples were below the NMWQCC standards during the June and December 2002 semi-annual events.
7. Barium was the only metal that exceeded a NMWQCC human health standard (1.0 mg/L), and was reported in samples from WP-1 (1.9 mg/L) and WP-13 (1.63 mg/L). The barium concentrations in groundwater from wells WP-1 and WP-13 are lower than data that was previously reported to the NMOCD.
8. The concentrations of chloride reported in samples from wells WP-5, WP-7, WP-13 and WP-14 exceeded the NMWQCC standard. The chloride level in the sample from well WP-13

Dynegy Midstream Services, L.P., Monument Gas Plant

was below the background concentration. The chloride concentrations in wells WP-5 and WP-7 have decreased from historical levels previously reported to the NMOCD.

9. The sulfate concentrations reported in samples from wells WP-5, WP-7 and WP-14 exceeded the NMWQCC standard, and background. The sulfate concentrations in wells WP-5 and WP-7 have decreased from historical levels previously reported to the NMOCD.
- 10 Concentrations of TDS exceeded the NMWQCC domestic water quality standard and background in samples from wells WP-5, WP-7, WP-13 and WP-14. The TDS concentration in water from well WP-14 suggests that the TDS concentration has risen over time, when compared to the historical data.

CASE NARRATIVE

ENVIRONMENTAL LAB OF TEXAS

Prepared for:

LARSON AND ASSOCIATES, INC.
P.O. BOX 50685
MIDLAND, TX 79710

Order#: G0205300

Project: Dynegy/Monument Plant

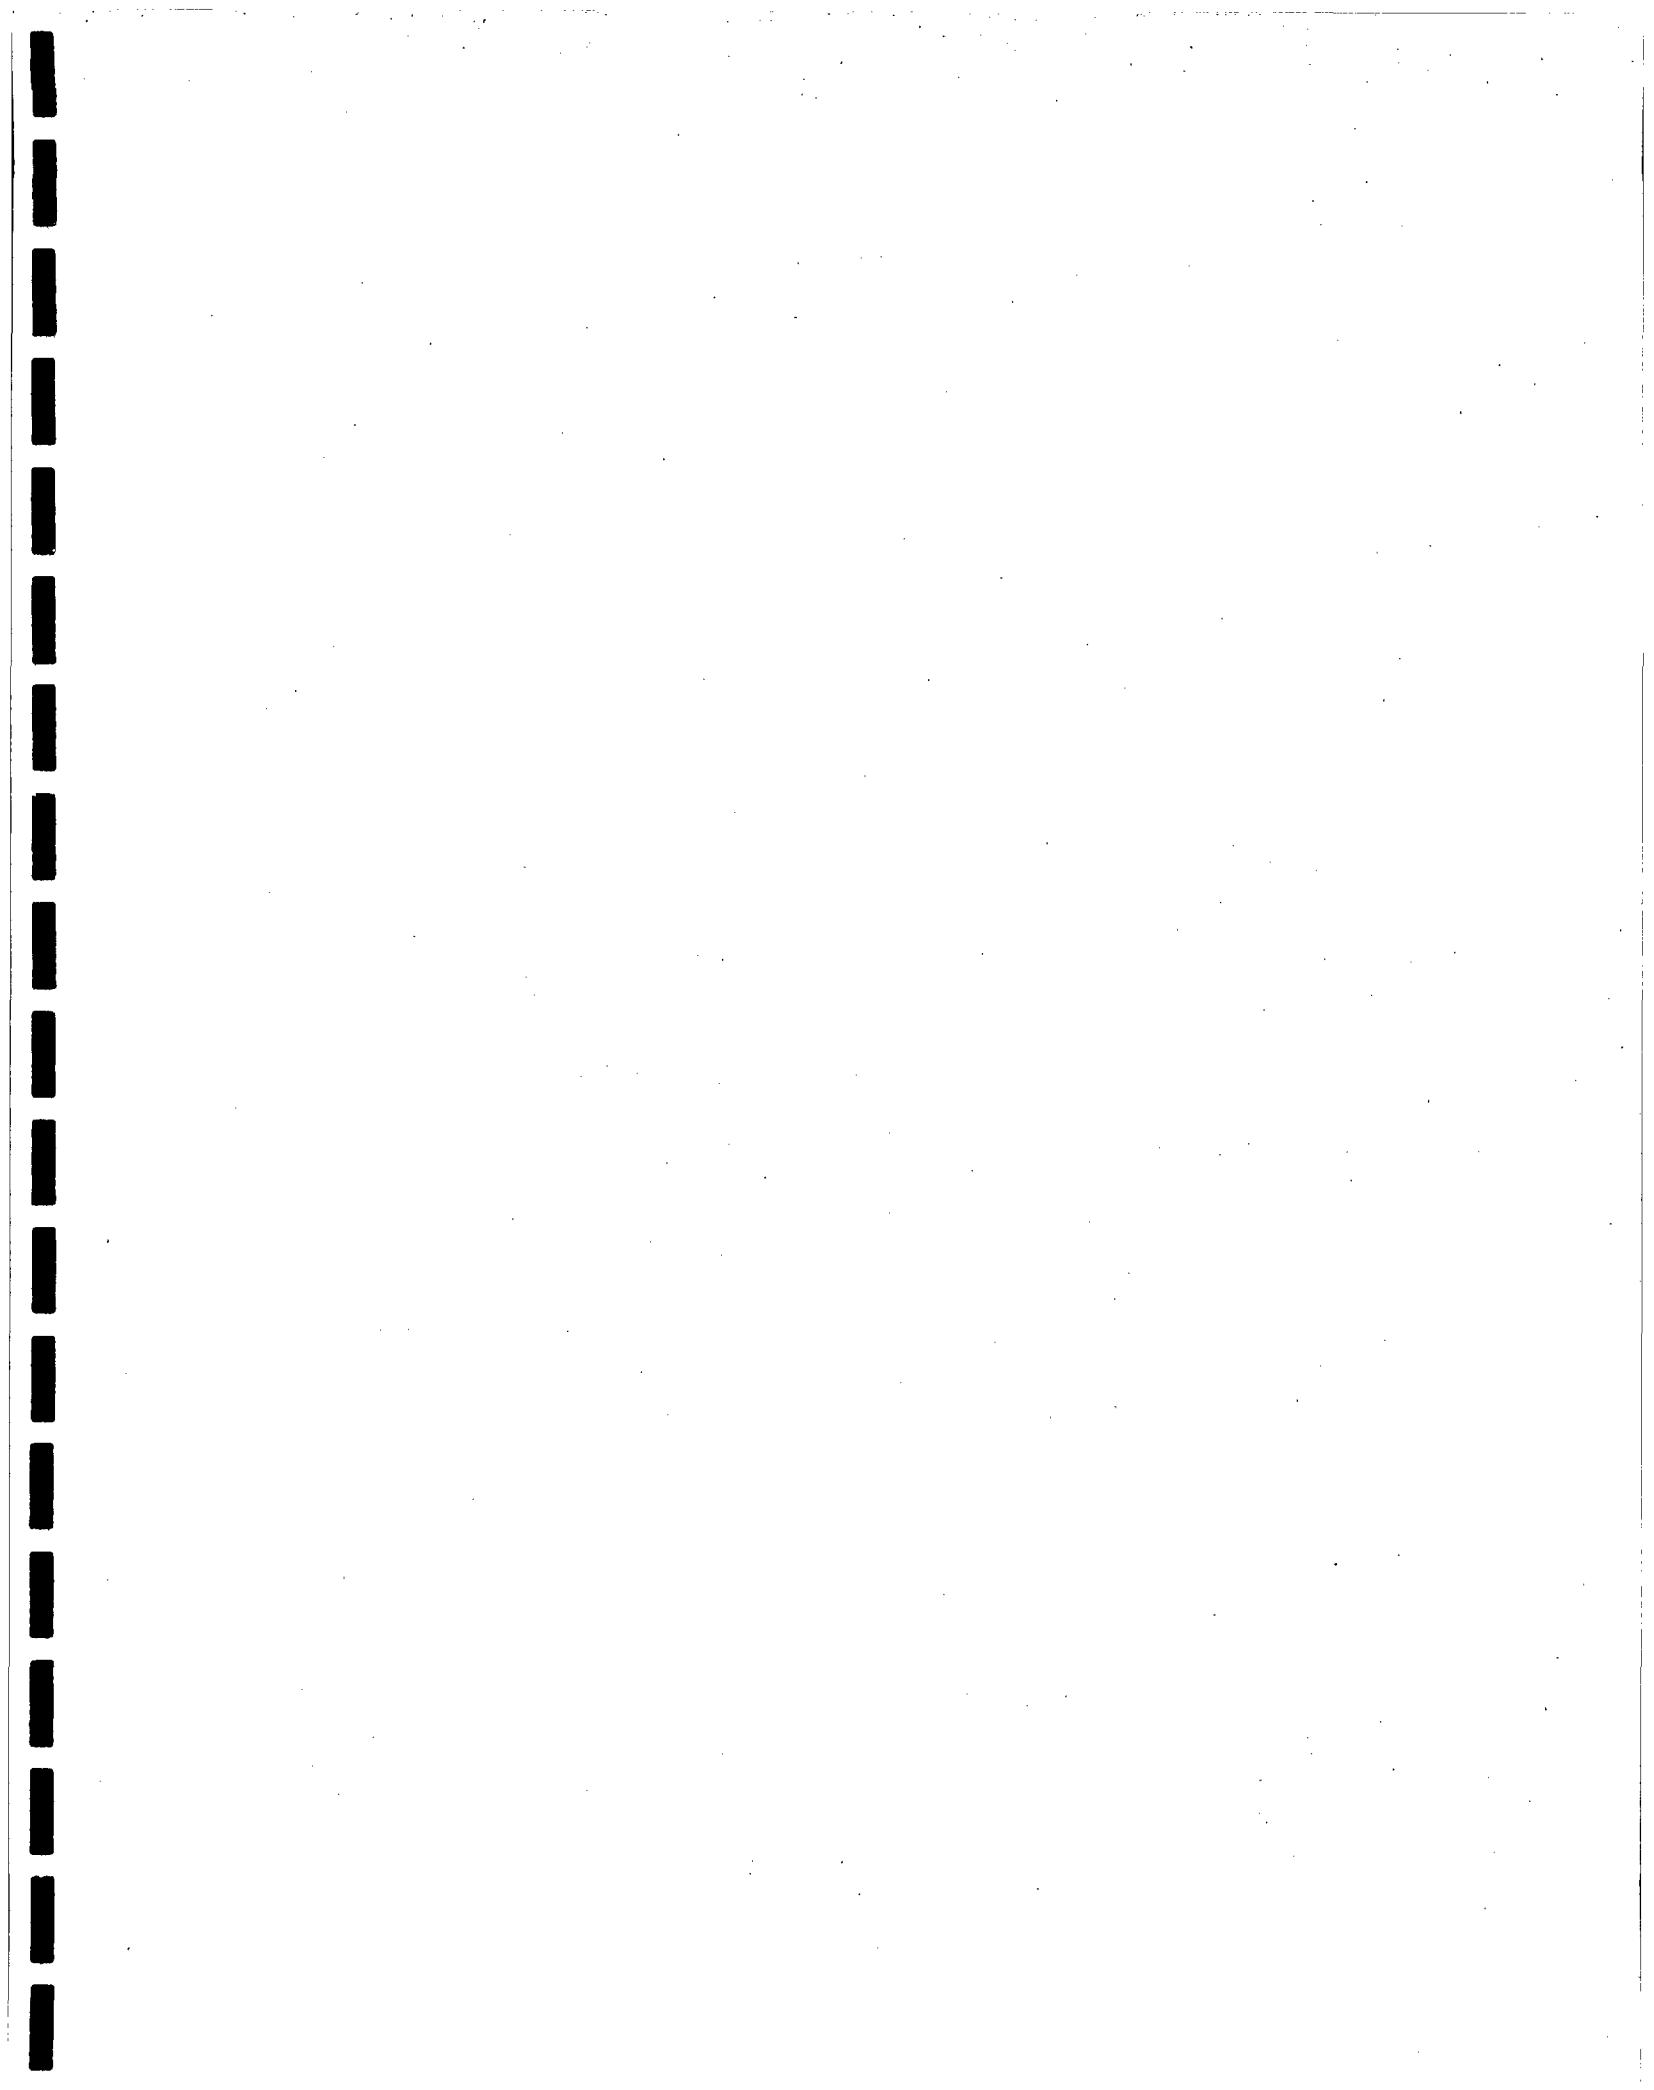

The following samples were received as indicated below and on the attached Chain of Custody record. All analyses were performed within the holding time and with acceptable quality control results unless otherwise noted.

SAMPLE ID	LAB ID	MATRIX	Date Collected	Date Received
WP-1	0205300-01	WATER	12/19/2002	12/19/2002
WP-5	0205300-02	WATER	12/19/2002	12/19/2002
WP-14	0205300-03	WATER	12/19/2002	12/19/2002

Surrogate recoveries on the 8021B BTEX are outside control limits due to matrix interference from coeluting compounds. (0205300-03)

The enclosed results of analyses are representative of the samples as received by the laboratory. Environmental Lab of Texas makes no representations or certifications as to the methods of sample collection, sample identification, or transportation handling procedures used prior to our receipt of samples. To the best of my knowledge, the information contained in this report is accurate and complete.

Annual Summary Report for 2000 Groundwater Monitoring Activities at DYNEGY
(Former Warren) Monument Gas Plant, Lea County, New Mexico

ENVIRONMENTAL

Dear Mr. Olson:

On behalf of DYNEGY Midstream Services, Inc. (DYNEGY), ARCADIS Geraghty & Miller, Inc. is submitting the following annual summary report for 2000 groundwater monitoring activities at the DYNEGY Monument Gas Plant, Lea County, New Mexico. Groundwater monitoring activities for 2000 were conducted by DYNEGY plant personnel. This annual summary report has been prepared jointly by DYNEGY and ARCADIS Geraghty & Miller, Inc. to satisfy the monitoring and reporting requirements outlined in the New Mexico Oil Conservation District (NMOCD) correspondence dated August 9, 1996, modified as approved in NMOCD correspondence dated June 17, 1998.

Tulsa,

SUMMARY OF MONITORING ACTIVITIES

The 2000 monitoring activities consisted of the following quarterly groundwater gauging and semi-annual sampling events. Any deviations, problems, or deficiencies encountered during the monitoring period are noted. Some of the 2000 gauging and sampling events were delayed, but the facility is making a diligent effort to meet the monitoring schedule.

FIRST QUARTER 2000

- Gauged fluid levels in 13 monitoring wells on March 29, 2000.

SECOND AND THIRD QUARTER 2000

- Gauged fluid levels in 13 monitoring wells on July 18, 2000.
- Sampled six monitoring wells (WP-1, WP-5, WP-6, WP-7, WP-13, and WP-14) on July 19, 2000 that did not contain measurable free-phase hydrocarbons. All groundwater samples were analyzed by SPL Laboratory for BTEX constituents using USEPA Method 8020A; inorganic constituents chlorides, TDS, and sulfates; and total metals.
- Well WP-2 was essentially dry and could not be sampled.

FOURTH QUARTER 2000

- Gauged fluid levels in 13 monitoring wells on January 18, 2001.
- Sampled six monitoring wells (WP-1, WP-5, WP-6, WP-7, WP-13, and WP-14) on January 26, 2001. All groundwater samples were analyzed by SPL Laboratory for BTEX constituents using USEPA Method 8020A; inorganic constituents chlorides, TDS, and sulfates; and total metals.

SUMMARY OF MONITORING AND ANALYTICAL RESULTS

FLUID LEVEL MEASUREMENTS

Results of the 2000 fluid-level monitoring activities are summarized below. A site map with monitoring well locations is presented as Figure 1.

- Field measurements, water-level elevations, liquid hydrocarbon thickness, and total depths are presented in Tables 1A, 1B, 1C, and 1D, respectively. A summary table of groundwater elevations corrected for the presence of hydrocarbons is presented in Table 1F. Based on previous results of liquid hydrocarbon characterization conducted at the site, an average specific gravity of 0.725 was used to calculate corrected groundwater elevations. Graphs of groundwater elevations versus time are presented as Appendix A.
- A slight increasing trend in water-level elevations was generally observed across the site during 2000. Well WP-2 was essentially dry, with the exception of the January 18, 2001, measurement.
- Groundwater was found at depths ranging from 22.60 feet (ft) to 42.20 ft below the measuring point elevations (Table 1A). The saturated thickness of the alluvial sediments beneath the site on January 18, 2001, ranged from 1.75 ft in Well WP-6 to 14.98 ft. in Well WP-7. The saturated thickness was less than 5 ft in 3 of the 13 wells at the site (Table 1E).
- Groundwater elevation contour maps for each quarterly monitoring period in which all monitoring wells were gauged are presented as Figures 2 through 4. The generalized groundwater flow direction beneath the eastern half of the site is toward the southeast while groundwater flow beneath the western portion of the site is toward the south. An apparent area of groundwater mounding is present east of the processing area. The configuration of the water table appears to be consistent throughout each monitoring event in 2000.
- Anomalous high water-level elevations were recorded in Well WP-1 during the July 18, 2000, gauging event, and in Well WP-14 during the January 18, 2001, gauging event. These values were not used in the construction of the groundwater elevation contour map for the periods. The cause of the anomalous data is unknown.

ANALYTICAL RESULTS

Analytical results for the 2000 monitoring program are summarized below.

- A summary of organic and inorganic groundwater quality data for the six wells (WP-1, WP-5, WP-6, WP-7, WP-13, and WP-14) sampled during the 2000 monitoring program is presented in Tables 2A and 2B. A series of graphs showing BTEX concentrations versus time and inorganic parameter (chlorides, TDS, and sulfate) concentrations versus time are presented as Appendix B. The analytical data sheets for samples collected during the 2000 monitoring program are presented as Appendix C.
- BTEX levels were detected in five out of six monitoring wells sampled during the 2000 sampling events. Well WP-7 was non detect for BTEX during these two sampling events. Benzene is the predominant constituent detected in five of the six groundwater samples with detectable concentrations of BTEX. During the 2000 Semi-Annual sampling events, the highest concentrations of benzene were detected in Wells WP-1, WP-13, and WP-5. Xylenes were also a constituent detected in Well WP-14 during the 2000 monitoring period.
- Inorganic groundwater quality indicates elevated concentrations of chlorides, TDS, and sulfates are present in the groundwater beneath the site, including Well WP-7, which is located in the northwest portion of the site. The elevated concentrations do not appear to be related to gas plant operations but are likely related to former operations at the Climax Chemical Company, located approximately one-half mile northwest (upgradient) of the DYNEGY site.
- A summary of total metals data for groundwater samples collected in 2000 is presented in Table 2B. Of the eight RCRA heavy metals, five of the eight (arsenic, barium, chromium, mercury, and selenium) metals were detected in the groundwater samples. Arsenic was detected in the six monitoring wells sampled at concentrations ranging from 0.00586 to 0.0361 mg/L. Barium was detected in all monitoring wells sampled at concentrations ranging from 0.0219 mg/L to 4.23 mg/L. Chromium was detected in only one sample collected from WP-6 at a concentration of 0.0165 mg/L. Mercury was detected in one sample collected from Well WP-7 at a concentration of 0.000908 mg/L. Selenium was detected in both samples collected from Well WP-7 at concentrations of 0.00551 mg/L and 0.0138 mg/L.

DISTRIBUTION OF LIQUID HYDROCARBONS

The approximate extent of liquid hydrocarbons is shown for each quarterly monitoring event on Figures 5 through 7. A brief summary of findings is presented below.

- During March 2000, liquid hydrocarbons were detected in eight (Wells WP-4, WP-6, WP-10, WP-11, WP-12, WP-13, WP-14 and WP-15) of the 13 wells

gauged. Liquid hydrocarbon thickness in wells ranged from 0.02 ft in Wells WP-6 and WP-13 to 0.55 ft in Well WP-15.

- During July 2000, liquid hydrocarbons were detected in eight (Wells WP-4, WP-6, WP-10, WP-11, WP-12, WP-13, WP-14, and WP-15) of the 13 wells. Liquid hydrocarbon thickness in wells ranged from 0.01 ft in Well WP-6 to 0.30ft in Well WP-4.
- During January 2001, liquid hydrocarbons were detected in six (Wells WP-4, WP-6, WP-10, WP-11, WP-12, and WP-15) of the 13 wells. Liquid hydrocarbon thickness in wells ranged from 0.06 ft in Well WP-6 to 0.55 ft in Wells WP-12 and WP-15.

SUMMARY OF HYDROCARBON RECOVERY OPERATIONS

Hydrocarbon recovery operations were ceased in April 1997 due to low water-table conditions and pump limitations.

CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the 2000 monitoring program, the following conclusions can be made.

- A slight increasing trend in water-level elevations was generally observed across the site during 2000. Well WP-2 was essentially dry, with the exception of the January 18, 2001, measurement.
- The generalized groundwater flow direction beneath the eastern half of the site is toward the southeast while groundwater flow beneath the western portion of the site is toward the south. An apparent area of groundwater mounding is present east of the processing area. The configuration of the water table appears to be consistent throughout each monitoring event in 2000.
- BTEX levels were detected in five out of six monitoring wells sampled during the 2000 sampling events. Well WP-7 was non detect for BTEX during these two sampling events. Benzene is the predominant constituent detected in five of the six groundwater samples with detectable concentrations of BTEX. During the 2000 Semi-Annual sampling events, the highest concentrations of benzene were detected in Wells WP-1, WP-13, and WP-5. Xylenes were also a constituent detected in Well WP-14 during the 2000 monitoring period.
- Inorganic groundwater quality indicates elevated concentrations of chlorides, TDS, and sulfates are present in the groundwater beneath the site, including Well WP-7, which is located in the northwest portion of the site. The elevated concentrations do not appear to be related to gas plant operations but are likely

ARCADIS GERAGHTY& MILLER

related to former operations at the Climax Chemical Company, located approximately one-half mile northwest (upgradient) of the DYNEGY site.

- Only low levels of the heavy metals arsenic, barium, chromium, mercury, and selenium were detected in groundwater samples.
- Hydrocarbon recovery operations were ceased in April 1997 due to low water table conditions and pump limitations. In an effort to make the recovery system operate more efficiently during low water level conditions, DYNEGY may purchase two bottom loading hydrocarbon skimming pumps for Wells WP-4 and WP-13. In addition, an expansion of the hydrocarbon recovery system is proposed.

Based on the results to the 2000 monitoring program the following recommendations can be made.

1. During the March 2001 sampling event, samples should be collected for analysis of BTEX, chlorides, TDS, and sulfates.
2. Complete the upgrade and modification of the hydrocarbon recovery system as discussed above.

Based on information discussed with the NMOCD during the March 5, 1998, meeting, DYNEGY proposes the following groundwater monitoring program for the Monument site in 2001. The 2001 groundwater monitoring program will consist of semi-annual groundwater sampling as approved by NMOCD in the correspondence dated June 17, 1998. Quarterly groundwater gauging activities will also occur during 2001. Prior to sampling, all monitoring wells will be gauged for the presence of liquid hydrocarbons and water-level elevations. The first groundwater sampling event will be conducted in June 2001 in an effort to coincide with late Spring precipitation events. The first event will be considered the comprehensive sampling event as all six monitoring wells (WP-1, WP-5, WP-6, WP-7, WP-13, and WP-14) without liquid hydrocarbons will be sampled for analysis of BTEX, chlorides, TDS, sulfates, and total metals using the appropriate USEPA methods. The second event will be conducted in October to coincide with the end of the Fall precipitation season. Three perimeter downgradient monitor wells (WP-1, WP-5, and WP-14) will be sampled during the second event for analysis of BTEX, chlorides, TDS, and sulfates. The above monitoring events are scheduled to coincide with seasonal periods of precipitation and thus, should be representative of higher groundwater flow conditions. The results of the groundwater monitoring program, as well as hydrocarbon recovery activities, will be summarized in an annual report submitted to the NMOCD. The annual report for 2001 will be submitted to the NMOCD by February 15, 2002.

The first sampling event of 2001 monitoring event is scheduled for June. The 2001 groundwater monitoring will be completed per the proposed plan unless additional input is received from the NMOCD.

Note: The bottom of Well WP-2 is 31.71 feet from top of casing, and was found to be dry prior to the January 18, 2001, monitoring event.

NA indicates not measured or not able to measure.

Note: Well #6 has trace of product but not enough to measure.

Note: #3 MW 3rd Quarter 97 unable to measure due to grounding cable in hole.

Case Narrative for:
Dynegy Midstream Services Limited Partnership

Certificate of Analysis Number:

01010773

Report To: ARCADIS Geraghty & Miller Tim Brandon 5100 E. Skelly Drive, Suite 1000 Tulsa OK 74135- ph: (918) 664-9900 fax: (918) 664-9925	Project Name: Monument, NM 88265 Site: Monument, NM 88265 Site Address: PO Number: State: New Mexico State Cert. No.: Date Reported: 2/14/01
---	---

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Your sample ID " MW-7 A-E" (SPL ID:01010773-06) was randomly selected for use in SPL's quality control program for the Total Metals analysis by SW846 Method 6010B. The Matrix Spike (MS) recovery was outside of the advisable quality control limits for Potassium (Batch ID:10032) due to matrix interference. A Post Digestion Spike (PDS) and Post Digestion Spike Duplicate (PDSD) was performed. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Your sample ID " MW-7 A-E" (SPL ID:01010773-06) was randomly selected for use in SPL's quality control program for the Total Metals analysis by SW846 Method 6010B. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Arsenic and Selenium (Batch ID:10032-T) due to matrix interference. A Post Digestion Spike (PDS) and Post Digestion Spike Duplicate (PDSD) was performed. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Your sample ID " MW-7 A-E" (SPL ID:01010773-06) was randomly selected for use in SPL's quality control program for the Total Metals analysis by SW846 Method 6010B. The Post Digestion Spike (PDS) and Post Digestion Spike Duplicate (PDSD) recoveries were outside of the advisable quality control limits for Sodium (Batch ID:10032B) due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Case Narrative for:

Dynegy Midstream Services Limited Partnership

AUG 01 2000

ARCADIS Geraghty & Miller

Certificate of Analysis Number:

00070460

<u>Report To:</u> ARCADIS Geraghty & Miller Tim Brandon 5100 E. Skelly Drive, Suite 1000 Tulsa OK 74135- ph: (918) 664-9900 fax: (918) 664-9925	<u>Project Name:</u> 2000 Sampling <u>Site:</u> Monument, NM 88265 <u>Site Address:</u> <u>PO Number:</u> <u>State:</u> New Mexico <u>State Cert. No.:</u> <u>Date Reported:</u> 7/25/00
---	--

Your sample ID "MW#7 A-E" (SPL ID: 00070460-04) was randomly selected for the use in SPL's quality control program for the Total Metals analysis by SW846 method 6010. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for several elements (Batch ID: 6127), due to matrix interference. A Post Digestion spike (PDS) and a Post Digestion Spike Duplicate (PDSD) was performed. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Your sample ID "MW#7 A-E" (SPL ID: 00070460-04) was randomly selected for the use in SPL's quality control program for the Total Metals analysis by SW846 method 6010. The Post Digestion spike (PDS) and a Post Digestion Spike Duplicate (PDSD) was performed and recoveries were outside of the advisable quality control limits for Calcium and Sodium (Batch ID: 6127A), due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Any data flags or quality control exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

West, Sonia

Subject:
Annual Summary Report for 1999 Groundwater Monitoring Activities at DYNEGY
(Former Warren) Monument Gas Plant, Lea County, New Mexico

ENVIRONMENTAL

Dear Mr. Olson:

On behalf of DYNEGY Midstream Services, Inc. (DYNEGY), ARCADIS Geraghty & Miller, Inc. is submitting the following annual summary report for 1999 groundwater monitoring activities at the DYNEGY Monument Gas Plant, Lea County, New Mexico. Groundwater monitoring activities for 1999 were conducted by DYNEGY plant personnel. This annual summary report has been prepared jointly by DYNEGY and ARCADIS Geraghty & Miller, Inc. to satisfy the monitoring and reporting requirements outlined in the New Mexico Oil Conservation District (NMOCD) correspondence dated August 9, 1996, modified as approved in NMOCD correspondence dated June 17, 1998.

Tulsa,
17 February, 2000

Contact:
Tim Brandon

Extension:
(918) 664-9900 ext. 124

SUMMARY OF MONITORING ACTIVITIES

The 1999 monitoring activities consisted of the following quarterly groundwater gauging and semi-annual sampling events. Any deviations, problems, or deficiencies encountered during the monitoring period are noted. Some of the 1999 gauging and sampling events were delayed, but the facility is making a diligent effort to meet the monitoring schedule.

FIRST QUARTER 1999

- Gauged fluid levels in 13 monitoring wells on April 7, 1999.

SECOND QUARTER 1999

- Gauged fluid levels in 13 monitoring wells on August 13, 1999.

THIRD QUARTER 1999

- Gauged fluid levels in 4 monitoring wells on October 28, 1999.
- Sampled four monitoring wells (WP-1, WP-5, WP-7, and WP-14) on October 28, 1999 which did not contain measurable free-phase hydrocarbons. All groundwater samples were analyzed by SPL Laboratory for BTEX constituents

ARCADIS GERAGHTY& MILLER

using USEPA Method 8020A; the inorganic constituents chlorides, TDS, and sulfates; total metals.

- Well WP-2 was essentially dry and could not be sampled.

FOURTH QUARTER 1999

- Gauged fluid levels in 13 monitoring wells on December 14, 1999.
- Sampled four monitoring wells (WP-1, WP-5, WP-7, and WP-14) on January 18, 2000. All groundwater samples were analyzed by SPL Laboratory for BTEX constituents using USEPA Method 8020A; the inorganic constituents chlorides, TDS, and sulfates; total metals.
- Well WP-2 was essentially dry and could not be sampled during the fourth quarter event.

SUMMARY OF MONITORING AND ANALYTICAL RESULTS

FLUID LEVEL MEASUREMENTS

Results of the 1999 fluid-level monitoring activities are summarized below. A site map with monitoring well locations is presented as Figure 1.

- Field measurements, water-level elevations, liquid hydrocarbon thickness, and total depths are presented in Tables 1A, 1B, 1C, and 1D, respectively. A summary table of groundwater elevations corrected for the presence of hydrocarbons is presented in Table 1F. Based on previous results of liquid hydrocarbon characterization conducted at the site, a average specific gravity of 0.725 was used to calculate corrected groundwater elevations. Graphs of groundwater elevations versus time are presented as Appendix A. Water level elevations are also included from May 26, 1998.
- A slight increasing trend in water-level elevations was observed across the site during 1999 with the exception of water-level elevations from Well WP-1. Well WP-2 was essentially dry during 1999.
- Groundwater was encountered at approximately 24.35 feet (ft) to 42.7 ft below the measuring point elevations (Table 1D). The saturated thickness of the alluvial sediments beneath the site ranged from being dry in Well WP-2 to 13.23 ft. in Well WP-7. The saturated thickness was less than 5 ft. in 3 of the 13 wells at the site.
- Groundwater elevation contour maps for each quarterly monitoring period in which all monitoring wells were gauged are presented as Figures 2 though 5 including one map for the May 26, 1998, gauging event. Groundwater flow beneath the eastern half of the site is predominantly towards the southeast while groundwater flow beneath the western portion of the site is toward the south.

ARCADIS GERAGHTY & MILLER

An apparent area of groundwater mounding is present east of the processing area. The configuration of the water table appears to be consistent throughout each monitoring event in 1999.

- An anomalous high water-level elevation was recorded in Well WP-1 during the August 13, 1999 gauging event. This value was not used in the construction of the groundwater elevation contour map for this period. The cause of the anomalous data is unknown.

ANALYTICAL RESULTS

Analytical results for the 1999 monitoring program are summarized below.

- A summary of organic and inorganic groundwater quality data for the four wells (WP-1, WP-5, WP-7, and WP-14) sampled during the 1999 monitoring program is presented in Tables 2A. A series of graphs showing BTEX concentrations versus time and inorganic parameter (chlorides, TDS, and sulfate) concentrations versus time are presented as Appendix B. The analytical data sheets for samples collected during the 1999 monitoring program are presented as Appendix C. Groundwater quality data is also included from the May 26, 1998 sampling event
- BTEX levels were detected in three out of four monitoring wells sampled during the 1999 sampling events. Well WP-7 was non detect for BTEX during these two sampling events. Benzene is the predominant constituent detected in three of the four groundwater samples with detectable concentrations of BTEX. During the 1999 Semi-Annual sampling events, the highest concentrations of benzene were detected in Wells WP-1 and WP-5. Xylenes was the predominant constituent detected in Well WP-14 during this period. Wells WP-6 and WP-13 were not sampled over this period due to the presence of a hydrocarbon film.
- Inorganic groundwater quality indicates elevated concentrations of chlorides, TDS, and sulfates are present in the groundwater beneath the site. The highest concentrations of chlorides, TDS, and sulfates were detected in Well WP-7, which is located in the northwest portion of the site. The elevated concentrations do not appear to be related to gas plant operations but are likely related to former operations at the Climax Chemical Company, located approximately one-half mile northwest (upgradient) of the Warren site.
- A summary of total metals data for groundwater samples collected in 1999 is presented in Table 2B. Of the eight RCRA heavy metals, five of the eight (arsenic, barium, chromium, mercury, and selenium) metals were detected in the groundwater samples. Arsenic was detected in all monitoring wells sampled at concentrations ranging from 0.0058 to 0.051 mg/L. Barium was detected in all four monitoring wells sampled at concentrations ranging from 0.022 mg/L to 7.32 mg/L. Chromium was detected in only one sample collected from WP-7 at a concentration of 0.0415 mg/L. Mercury was detected in only one sample collected from Well WP-7 at a concentration of 0.0014 mg/L. Selenium was

ARCADIS GERAGHTY& MILLER

detected in two monitoring wells at concentrations ranging from 0.00755 mg/L to 0.0142 mg/L.

DISTRIBUTION OF LIQUID HYDROCARBONS

The approximate extent of liquid hydrocarbons is shown for each quarterly monitoring event on Figures 6 through 9. A brief summary of findings is presented below.

- During April 1999, liquid hydrocarbons were detected in eight (Wells WP-4, WP-6, WP-10, WP-11, WP-12, WP-13, WP-14 and WP-15) of the 13 wells. Liquid hydrocarbon thickness in wells ranged from 0.03 ft in Well WP-6 to 0.91 ft in Well WP-12.
- During August 1999, liquid hydrocarbons were detected in seven (Wells WP-4, WP-6, WP-10, WP-11, WP-12, WP-13, and WP-15) of the 13 wells. Liquid hydrocarbon thickness in wells ranged from 0.02 ft in Wells WP-6 and WP-13, to 0.50ft in Well WP-12.
- During October 1999, liquid hydrocarbons were not detected in any of the wells gauged.
- During December 1999 liquid hydrocarbons were detected in seven (Wells WP-4, WP-6, WP-10, WP-11, WP-12, WP-13, and WP-15) of the 13 wells. Liquid hydrocarbon thickness in wells ranged from 0.02 ft in Well WP-6 to 0.35 ft in Well WP-15.

SUMMARY OF HYDROCARBON RECOVERY OPERATIONS

Hydrocarbon recovery operations were ceased in April 1997 due to low water-table conditions and pump limitations.

CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the 1999 monitoring program, the following conclusions can be made.

- A slight increasing trend in water-level elevations was observed across the site during 1999 with the exception of water-level elevations from Well WP-1. Well WP-2 was essentially dry during 1999.
- Groundwater flow beneath the eastern half of the site is predominantly towards the southeast while groundwater flow beneath the western portion of the site is toward the south. An apparent area of groundwater mounding is present east of the processing area, and possibly in Well WP-7. The configuration of the water table appears to be consistent throughout each monitoring event in 1999.

ARCADIS GERAGHTY& MILLER

- BTEX levels were detected in all samples from monitoring wells except Well WP-7. Benzene is the predominant constituent detected in three of the four groundwater samples with detectable concentrations of BTEX. During the 1999 monitoring period, the highest concentrations of benzene were detected in Wells WP-1 and WP-5. Xylene was the predominant constituent detected in Well WP-14 during the 1999 sampling event. Wells WP-6 and WP-13 were not sampled after the first quarter of 1997.
- Inorganic groundwater quality indicates elevated concentrations of chlorides, TDS, and sulfates are present in the groundwater beneath the site. The highest concentrations of chlorides, TDS, and sulfates were detected in Well WP-7 which is located in the northwest portion of the site. The elevated concentrations do not appear to be related to gas plant operations but are likely related to former operations at the Climax Chemical Company located approximately one-half mile northwest (upgradient) of the Warren site.
- Only low levels of the heavy metals arsenic, barium, chromium, mercury, and selenium were detected in groundwater samples.
- Hydrocarbon recovery operations were ceased in April 1997 due to low water table conditions and pump limitations. In an effort to make the recovery system operate more efficiently during low water level conditions, DYNEGY may purchase two bottom loading hydrocarbon skimming pumps for Wells WP-4 and WP-13. In addition, an expansion of the hydrocarbon recovery system is proposed.

Based on the results to the 1999 monitoring program the following recommendations can be made.

1. During the March 2000 sampling event, samples should be collected for analysis of BTEX, chlorides, TDS, and sulfates.
2. Complete the upgrade and modification of the hydrocarbon recovery system as discussed above.

Based on information discussed with the NMOCD during the March 5, 1998, meeting, Warren proposes the following groundwater monitoring program for the Monument site in 2000. The 2000 groundwater monitoring program will consist of semi-annual groundwater sampling as approved by NMOCD in the correspondence dated June 17, 1998. Quarterly groundwater gauging activities will also occur during 2000. Prior to sampling, all monitoring wells will be gauged for the presence of liquid hydrocarbons and water-level elevations. The first groundwater sampling event will be conducted in June 2000 in an effort to coincide with late Spring precipitation events. The first event will be considered the comprehensive sampling event as all six monitoring wells (WP-1, WP-5, WP-6, WP-7, WP-13, and WP-14) without liquid hydrocarbons will be sampled for analysis of BTEX, chlorides, TDS, sulfates, and total metals using the appropriate USEPA methods. The second event will be conducted in October to coincide with the end of the Fall precipitation season. Three perimeter downgradient monitor wells (WP-1, WP-5, and WP-14)

ARCADIS GERAGHTY& MILLER

will be sampled during the second event for analysis of BTEX, chlorides, TDS, and sulfates. The above monitoring events are scheduled to coincide with seasonal periods of precipitation and thus, should be representative of higher groundwater flow conditions. The results of the groundwater monitoring program, as well as hydrocarbon recovery activities, will be summarized in an annual report submitted to the NMOCD. The annual report for 2000 will be submitted to the NMOCD by February 15, 2001.

The first sampling event of 2000 monitoring event is scheduled for June. The 2000 groundwater monitoring will be completed per the proposed plan unless additional input is received from the NMOCD. Please contact J. Dee Morris of DYNEGY at (713) 507-6400 if you have any questions regarding this annual summary report package.

Sincerely,

Note: The bottom of well WP-2 is 31.71 feet from top of casing. Well #2 is dry.

NA indicates not measured or not able to measure.

Note: Well #6 has trace of product but not enough to measure.

Note: #3 MW 3rd Quarter 97 unable to measure due to grounding cable in hole.

RECEIVED

Case Narrative for:
Dynegy Midstream Services Limited Partnership

DEC 13 1999

Certificate of Analysis Number:

ARCADIS Geraghty & Miller

99100552

<u>Report To:</u> ARCADIS Geraghty & Miller Tim Brandon 5100 E. Skelly Drive, Suite 1000 Tulsa OK 74135- ph: (918) 664-9900 fax: (918) 664-9925	<u>Project Name:</u> <u>Site:</u> Monument, NM <u>Site Address:</u> <u>PO Number:</u> <u>State:</u> New Mexico <u>State Cert. No.:</u> <u>Date Reported:</u> 12/6/99
---	--

As per the request of Tim Brandon of Arcadias Geraghty & Miller, TDS was added and analyzed outside the method holding time.

Your sample ID "MW#14 A-E" (SPL ID: 99100552-04) was analyzed for Purgable Aromatics by SW846 method 8021B. The surrogate 4-Bromofluorobenzene was outside the quality control limits, due to matrix interference.

Your sample ID "MW#5 A-E" (SPL ID: 99100552-02) was randomly selected for the use in SPL's quality control program for the Purgable Aromatics analysis by SW846 method 8021B. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Benzene (Batch ID: HP_S_991109A-97651), due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Your sample ID "MW#1 A-E" (SPL ID: 99100552-01) was randomly selected for the use in SPL's quality control program for the Total Metals analysis by SW846 method 6010B. The Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Calcium (Batch ID: TJA_991103B-89567), due to matrix interference. A Laboratory Control Sample (LCS), Post Digestion Spike (PDS), and Post Digestion Spike Duplicate (PDSD) were analyzed as a quality control check for the analytical batch.

Your sample ID "MW#1 A-E" (SPL ID: 99100552-01) was randomly selected for the use in SPL's quality control program for the Total Metals analysis by SW846 method 6010B. The Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Sodium (Batch ID: TJA_991111A-100187), due to matrix interference. A Laboratory Control Sample (LCS), Post Digestion Spike (PDS), and Post Digestion Spike Duplicate (PDSD) were analyzed as a quality control check for the analytical batch.

Any data flags or quality control exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

Analyte	Spike Added	Result	Percent Recovery	Lower Limit	Upper Limit
Sulfate	26.8	25.8	96	82	111

Matrix Spike (MS) / Matrix Spike Duplicate (MSD)

Sample Spiked: 00010384-01

RunID: WET_000121C-163804 Units: mg/L

Analysis Date: 01/21/2000 10:30 Analyst: ES

Analyte	Sample Result	MS Spike Added	MS Result	MS % Recovery	MSD Spike Added	MSD Result	MSD % Recovery	RPD	RPD Limit	Low Limit	High Limit
Sulfate	5.4	5	10.5	101	5	10.4	99.5	1.81	9.5	84	120

Qualifiers: ND/U - Not Detected at the Reporting Limit
B - Analyte detected in the associated Method Blank
J - Estimated value between MDL and PQL

* - Recovery Outside Advisable QC Limits
D - Recovery Unreportable due to Dilution

Sample Receipt Checklist

Workorder:	00010384	Received by:	Barrera, Nancy
Date and Time Received:	1/19/00 10:00:00 AM	Carrier name:	<u>FedEx</u>
Temperature:	4		
Shipping container/coolers in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Present <input type="checkbox"/>
Custody seals intact on shipping container/coolers?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Present <input type="checkbox"/>
Custody seals intact on sample bottles?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Present <input checked="" type="checkbox"/>
Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Samples in proper container/bottle?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Container/Temp Blank temperature in compliance?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Water - VOA vials have zero headspace?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Present <input type="checkbox"/>
Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>
