RE: 2005 Annual Report for the Schlumberger Oilfield Services (Dowell) Facility in Hobbs, New Mexico

Dear Mr. Ford:

On behalf of Schlumberger Oilfield Services (Dowell), enclosed are two copies of the 2005 Annual Report for the facility in Hobbs, New Mexico. The results of the fourth quarter ground-water monitoring event for 2005 are included in the annual report. An electronic version of the report is being sent via e-mail. If you have any questions concerning the results please feel free to contact me at (307) 760-3277 or John Miller at (281) 285-8498.

Sincerely,

Rick Deuell, P.E.

Enclosres:

1.0 INTRODUCTION

1.0 INTRODUCTION

This report documents monitoring and remedial activities performed in 2005 at the Schlumberger Oilfield Services Facility in Hobbs, New Mexico (Figures 1 and 2). Field work conducted by Western Water Consultants, Inc. (WWC) during the four quarters of 2005 consisted of air and ground-water monitoring, and routine remediation system operation and maintenance. The following sections provide an overview of the field work performed, discussion of the data, and recommendations for 2006.

2.0 GROUND-WATER MONITORING

2.0 GROUND-WATER MONITORING

Ground-water monitoring was performed quarterly in 2005 by WWC personnel. The fourth quarter monitoring event was performed October 9, 2005. Results of the previous sampling events for 2003 were presented in reports to the New Mexico Oil and Conservation Division (NMOCD) dated March 3, 2005; May 16, 2005; and August 10, 2005.

2.1 Static Water Level

Static water levels were measured quarterly in 2005 using an water level probe. The probe was decontaminated between wells with Simple Green and a distilled water rinse. Fourth quarter water level measurements are presented in Table 1, along with historic water level data for comparison. Free product has never been detected at this site.

A map of the potentiometric surface generated from the fourth quarter water level elevations is presented as Figure 3. The ground-water flow direction continues to flow to the east with a hydraulic gradient of 0.006 consistent with earlier determinations of ground-water flow. Ground-water elevations increased 0.2 feet in the last quarter. This is continuing trend only reversed for short periods after large precipitation events.

2.2 Ground-water Sampling

Ground-water samples were collected from monitoring wells MW-2, 4, 6, 7, 8, 9, 13, 14, and 15 during the first three quarters in 2005. During the fourth quarter monitoring event, ground-water samples were collected from all monitoring wells. The Shell Station well was not sampled due to a lack of water. This well was abandoned by the owner in 2005. A minimum of three well volumes of ground-water were purged from each well using a Redi-flow submersible pump. The submersible pump was decontaminated with a Simple Green solution and clean water rinse between wells. Purge water was placed into two galvanized steel stock tanks on site and allowed to evaporate.

Ground-water samples were collected using disposable polyethylene bailers and analyzed for volatile organic compounds by EPA Method 8260. During the fourth quarter monitoring event duplicate samples were collected from MW-12 and MW-13. The analytical results for the fourth quarter monitoring event are provided in Table 2 along with historical data for comparison. Laboratory analytical reports for the fourth quarter monitoring event are presented as Appendix A.

***3.0 SOIL VAPOR EXTRACTION
SYSTEM MONITORING***

3.0 SOIL VAPOR EXTRACTION SYSTEM MONITORING

Air samples were collected quarterly from the three soil vapor extraction (SVE) systems in 2005 and analyzed for volatile organics by EPA Methods 8260. Results of the air quality monitoring are provided on Table 3 along with historical data for comparison. Laboratory data reports are presented as Appendix A. As expected, concentrations in the air being removed are declining. At the former UST System, halocarbons continue to be removed. At the former Waste Pond System, both aromatic and halocarbon compounds are removed. Concentrations in the air at the Acid Dock System are below detectable levels.

4.0 DISCUSSION

4.0 DISCUSSION

Constituents detected in the ground-water at the Hobbs facility are declining. Each monitoring well that has had detections in the past now exhibits an overall downward trend. Concentrations of aromatic hydrocarbon have declined to the extent that ground-water at monitoring wells have no measurements of BTEX constituents above MCL's.

As shown on Table 2, halocarbons remain consistent with historic declining trends in most monitoring wells. All wells declined in concentrations during the fourth quarter with especially significant declines at MW-6 and MW-13. Halocarbon concentrations have declined in the ground-water such that only wells MW-4, MW-5, MW-6, MW-7, and MW-8 have any concentrations above MCL's. These are very low concentrations of halocarbons, only slightly above MCL's. Plots were constructed for static water level versus various halocarbon concentrations to illustrate the declines and/or stabilization of constituents at individual wells (Appendix B). An isoconcentration map for total halocarbons (Figure 4) was constructed with the fourth quarter water quality data. As shown the concentrations are declining significantly. .

SVE and air-sparge systems at the Hobbs facility have run almost 100 percent of the time during 2005 as shown on Figures 5 and 6.

Air quality monitoring indicates both BTEX and halocarbon constituents continue to be removed in the former wastewater collection area. As shown on Table 3, total concentrations have declined from high levels of 425.8 parts per million (ppm) BTEX and 680.7 ppm halocarbons in 1995 to <0.1 ppm BTEX and 2.7 ppm halocarbons in October 2005. The decline of these constituents in air samples and in the water quality monitoring at MW-2 indicates the area is being successfully remediated. MW-2 is now below MCL's for all constituents.

BTEX constituents detected in air samples from the former UST area remain at nondetect levels, while halocarbons have declined from a high level of 1379.58 ppm in 1995 to 2.4 in October 2005 (Table 3). As shown on Table 2, halocarbons in MW-4 have declined from a high level of 5.9 ppm in 1996 to a low of 0.005 ppm in 2004. In the downgradient well MW-9, halocarbons have declined from greater than 2 ppm in 1997 and 1998, to 0.015 ppm in October 2005. Continued SVE and air sparging of the soil and water should facilitate further declines of halocarbon constituents in the ground-water at this area.

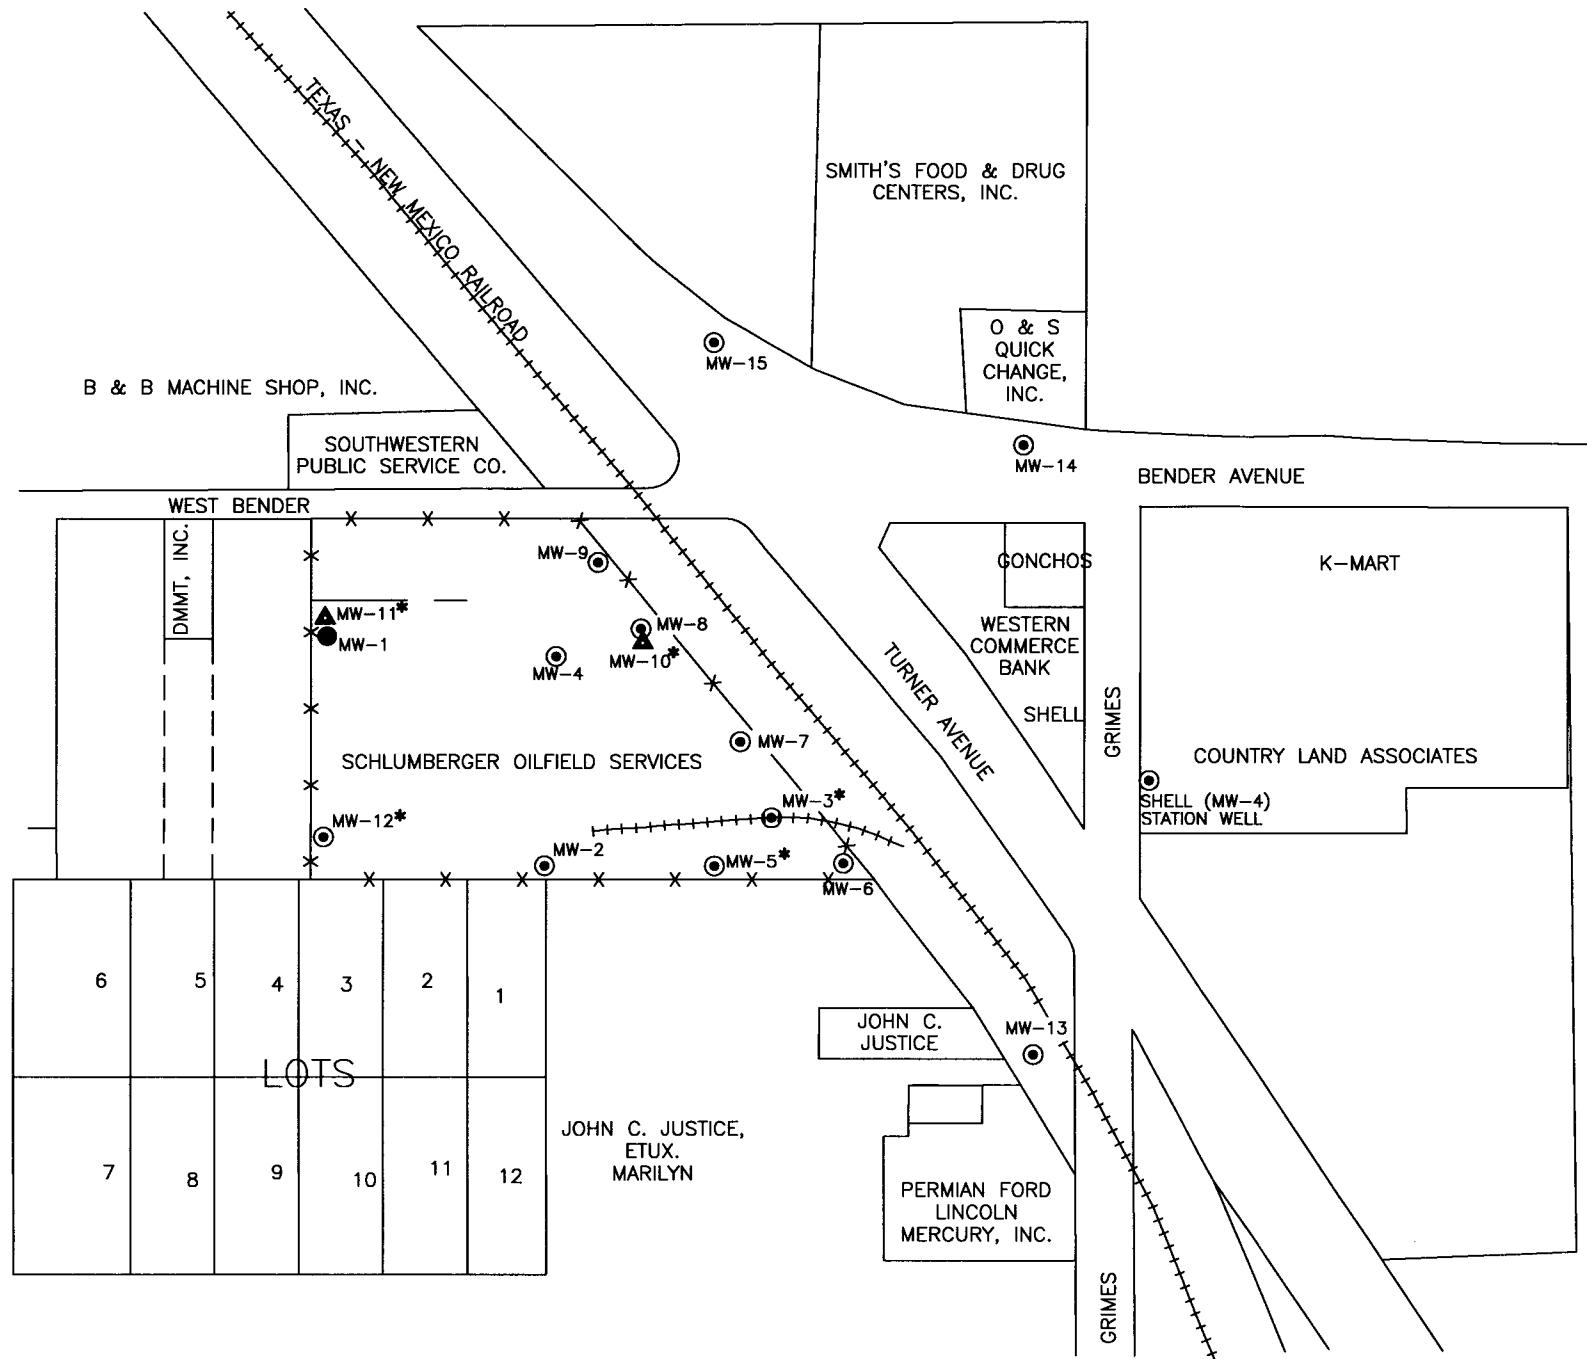

Air samples collected from the acid plant SVE system were nondetect for both BTEX and halocarbon constituents in 2005. However, constituents detected in the ground-water at monitoring wells MW-3, MW-5, MW-6, and MW-7 have either declined or remained relatively stable.

5.0 RECOMMENDATIONS

5.0 RECOMMENDATIONS

As mentioned previously, hydrocarbons remain below MCL's in the ground-water at perimeter monitoring wells MW-13, MW-14 and MW-15. Hydrocarbons and chlorocarbons have been declining in the former wastewater collection area and former UST and have either declined or stabilized in the acid plant area. Dowell recommends that the quarterly ground-water monitoring schedule remain unchanged with monitoring wells MW-3, MW-5, MW-10, MW-11, and MW-12 to be sampled only during the fourth quarter. Static water levels are proposed to be collected from all monitoring wells on a quarterly basis. Operation of the Acid Dock SVE, Waste Pond SVE, and the UST SVE and air-sparge system will continue.

Notes:

Only commonly detected compounds are listed. Other compounds that have been detected infrequently are included in the laboratory reports.

ND - Not Detected at detection limit shown in parentheses.

italicized value - is below the method detection limit.

< - analyte detected above the method detection limit but table is reported only to 1 part per billion

*SD4 - Shell Service Station monitoring well MW-4

1,1-DOA - 1,1-Dichloroethane

1,2-DOA - 1,2-Dichloroethane

1,1-DCE - 1,1-Dichloroethene

PCE - Tetrachloroethane

TCA - 1,1,1-Trichloroethane

TCE - Trichloroethene

STL - Duplicate samples sent to STL, Corpus Christi, Texas

Laboratory Analytical Reports

ANALYTICAL SUMMARY REPORT

October 21, 2005

Rick Deuell
Western Water Consultants
611 Skyline Rd
Laramie, WY 82070

Workorder No.: C05100428
Project Name: 93007 Hobbs

Energy Laboratories Inc. received the following 17 samples from Western Water Consultants on 10/11/2005 for analysis.

Sample ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C05100428-001	93007-14.10/05	10/09/05 7:00	10/11/05	Aqueous	SW8260B VOCs, Standard List
C05100428-002	93007-15.10/05	10/09/05 7:30	10/11/05	Aqueous	Same As Above
C05100428-003	93007-12.10/05	10/09/05 8:00	10/11/05	Aqueous	Same As Above
C05100428-004	93007-11.10/05	10/09/05 8:30	10/11/05	Aqueous	Same As Above
C05100428-005	93007-13.10/05	10/09/05 9:00	10/11/05	Aqueous	Same As Above
C05100428-006	93007-5.10/05	10/09/05 9:30	10/11/05	Aqueous	Same As Above
C05100428-007	93007-6.10/05	10/09/05 10:00	10/11/05	Aqueous	Same As Above

ORIGINAL SAMPLE SUBMITTAL(S)

All original sample submittals have been returned with the data package. A copy of the submittal(s) has been included and tracked in the data package.

SUBCONTRACTING ANALYSIS

Subcontracting of sample analyses to an outside laboratory may be required. If so, ENERGY LABORATORIES will utilize its branch laboratories or qualified contract laboratories for this service. Any such laboratories will be indicated within the Laboratory Analytical Report.

SAMPLE TEMPERATURE COMPLIANCE: 4°C ($\pm 2^\circ\text{C}$)

Temperature of samples received may not be considered properly preserved by accepted standards. Samples that are hand delivered immediately after collection shall be considered acceptable if there is evidence that the chilling process has begun.

ENERGY LABORATORIES, INC. - CASPER, WY certifies that certain method selections contained in this report meet requirements as set forth by NELAC. Some client specific reporting requirements may not require NELAC reporting protocol. NELAC Certification Number E87641.

ELI appreciates the opportunity to provide you with this analytical service. For additional information and services visit our web page www.energylab.com.

The total number of pages of this report are indicated by the page number located in the lower right corner.

ANALYTICAL SUMMARY REPORT

October 26, 2005

Rick Deuell
Western Water Consultants
611 Skyline Rd
Laramie, WY 82070

Workorder No.: C05100399
Project Name: 93007 Hobbs

Energy Laboratories Inc. received the following 3 samples from Western Water Consultants on 10/11/2005 for analysis.

Sample ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C05100399-001	93007-WP.10/05	10/10/05 11:00	10/11/05	Air	SW8260B VOCs, Standard List
C05100399-002	93007-AD.10/05	10/10/05 11:15	10/11/05	Air	Same As Above
C05100399-003	93007-UST.10/05	10/10/05 11:30	10/11/05	Air	Same As Above

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative or Report.

If you have any questions regarding these tests results, please call.

eli-t - Energy Laboratories, Inc. - College Station, TX

ORIGINAL SAMPLE SUBMITTAL(S)

All original sample submittals have been returned with the data package. A copy of the submittal(s) has been included and tracked in the data package.

SUBCONTRACTING ANALYSIS

Subcontracting of sample analyses to an outside laboratory may be required. If so, ENERGY LABORATORIES will utilize its branch laboratories or qualified contract laboratories for this service. Any such laboratories will be indicated within the Laboratory Analytical Report.

SAMPLE TEMPERATURE COMPLIANCE: 4°C ($\pm 2^\circ\text{C}$)

Temperature of samples received may not be considered properly preserved by accepted standards. Samples that are hand delivered immediately after collection shall be considered acceptable if there is evidence that the chilling process has begun.

ENERGY LABORATORIES, INC. - CASPER, WY certifies that certain method selections contained in this report meet requirements as set forth by NELAC. Some client specific reporting requirements may not require NELAC reporting protocol. NELAC Certification Number E87641.

ELI appreciates the opportunity to provide you with this analytical service. For additional information and services visit our web page www.energylab.com.
