the Air Stripper and MW-11 and MW-14 -- Samples Taken 1/10/97
- PAH Results For MW-14 -- Sample Taken 1/10/97

## **1.0 INTRODUCTION**

This report summarizes the results of the remediation system operations for the period of October 15, 1996 through January 15, 1997. This report serves as both the 1996 Fourth Quarter Report and the Second Annual Report.

The primary objectives of the remediation system continue to have been met since the system installation, namely:

- Approximately 131 gallons of product have been recovered.
- No free product has been observed in the downgradient wells.

It is apparent that the only oil which was recovered in the fourth quarter, and for most of 1996, is the oil that was placed in the recovery tank from wells which were bailed. Free product is not reaching the interception trench, and free product appeared in only one of the three wells (MW-10, MW-12, and MW-13) located in close proximity and north of the trench. In addition, the level in this well (MW-10) was only .05 feet.

The trench is preventing flow of water downgradient so that the soluble constituents in the water can be air stripped. The trench is accomplishing this objective quite well, as shown by the absence or extremely low levels of BETX in the two downgradient wells (MW-12 and MW-14).

As stated in the 1996 Third Quarter Report, two operational problems were encountered during the third quarter. First, the pump in the recovery trench failed for approximately three weeks. The pump was replaced and was fully operational during the fourth quarter. Second, the flow totalizer was not functioning correctly in the third quarter. It was repaired during the fourth quarter of 1996 and no problems were encountered during the period of 11/10/96 to 1/10/97.

The discharge limit for benzene, for one sample taken during the fourth quarter, was exceeded, but the discharge limits for ethylbenzene, toluene, and xylene were met. This sample was inadvertently taken the day before scheduled cleaning when the system was known to be experiencing failure due to calcium buildup in the air stripper. The two subsequent samples met all discharge requirements. The other two samples obtained during the third quarter were taken in January, since scheduling conflicts resulted between the personnel providing maintenance and the personnel performing the sampling.

The major system improvement in 1996 was development of an improved sequestering agent which reduced fouling and therefore reduced maintenance requirements and allowed proper operation of the totalizer. Another improvement was establishment of a gate valve, which prevented excess accumulation of water in the oil/water separator.

An evaluation of the remediation system operation will be conducted during the first quarter of 1997 to determine what, if any, additional measures can be taken to expedite the completion of the remediation activities.

The cleanup objectives for the landfarming area were met in 1996 for TPH as gas and diesel. A dramatic reduction in the TPH value as oil was achieved, but the values still slightly exceed the objective of 5,000 mg/Kg. Landfarming was suspended in November 1996 and will resume in the spring of 1997. The landfarming will continue until the cleanup objectives are met.

## **2.0 LABORATORY RESULTS**

### **2.1 MONTHLY BETX RESULTS FOR THE INFLUENT AND EFFLUENT OF THE AIR STRIPPER**

The monthly samples for the influent and effluent of the air stripper were taken on 11/10/96 and 1/10/97. The results from these sampling events are summarized in Table 1. All figures and tables are presented at the end of the text before the appendices. The analytical results are presented in Appendix A. Samples were not obtained during December 1996 due to conflict of schedules between the personnel maintaining the system and the personnel obtaining samples. Two samples were obtained in January 1997 in order to, in part, make up for the missing samples and, in part, to provide a duplicate set of analyses. The results show that all discharge requirements were met during the January 1997 sampling events. The discharge requirements were not met during the November 1996 sampling event for the reason described in the Introduction.

### **2.2 QUARTERLY BETX RESULTS FOR MONITORING WELLS WITH NO FREE PRODUCT**

The quarterly BETX results for monitoring wells which did not contain free product are presented in Table 2. The analytical results are presented in Appendix A for the samples taken on 1/10/97.

The two monitoring wells south of the interception trench (monitoring wells MW-11 and MW-14) have never shown any indication of free product.

## 2.3 ANNUAL RESULTS

The results for the annual analyses are presented in Appendix A. In addition to the BETX results discussed in Sections 2.1 and 2.2, the annual analyses for the influent and effluent of the air stripper, and wells not containing free product, include (per the approved Discharge Plan dated January 12, 1995 from the Energy, Minerals and Natural Resource Department to Amoco Oil Corporation):

- PAHs
- Heavy Metals
- Cations/Anions

Appendix A contains complete sets of laboratory reports and therefore different sets of analyses are presented in different reports.

### **3.0 PRODUCT THICKNESS**

Product thickness measurements were taken in the monitoring wells during the January sampling event. Table 3 contains product thickness information. The free product thickness map is shown in Figure 8. The product thickness maps from September 30, 1996; April 16 and 17, 1996; November 25 and 26, 1995; October 2, 1995; June 16, 1995; February 9, 1995; and July 2, 1996 are shown in Figures 7, 6, 5, 4, 3, 2, and 1. It is clear from the data that the product thickness has decreased in all of the wells (with the exception of Well No. 2) over the duration of the remediation period.

#### **4.0 FLUIDS PUMPED**

During the time period of November 10, 1996 to January 10, 1997, 556,639 gallons of water were pumped. This is equivalent to an average flow rate of 6.3 gallons per minute. The use of a new sequestering agent has resulted in elimination of the problem of the totalizer fouling and being inoperative.

No oil was recovered between November 1996 and January 1997. As noted in the Introduction, there currently appears to be no movement of the oil. The only well showing a depth in excess of .15 feet is Well No. 2, which is near the storage tank. The wells in closest proximity to the interception trench (8, 10, 12, 13) contain .05 feet of product, or less.

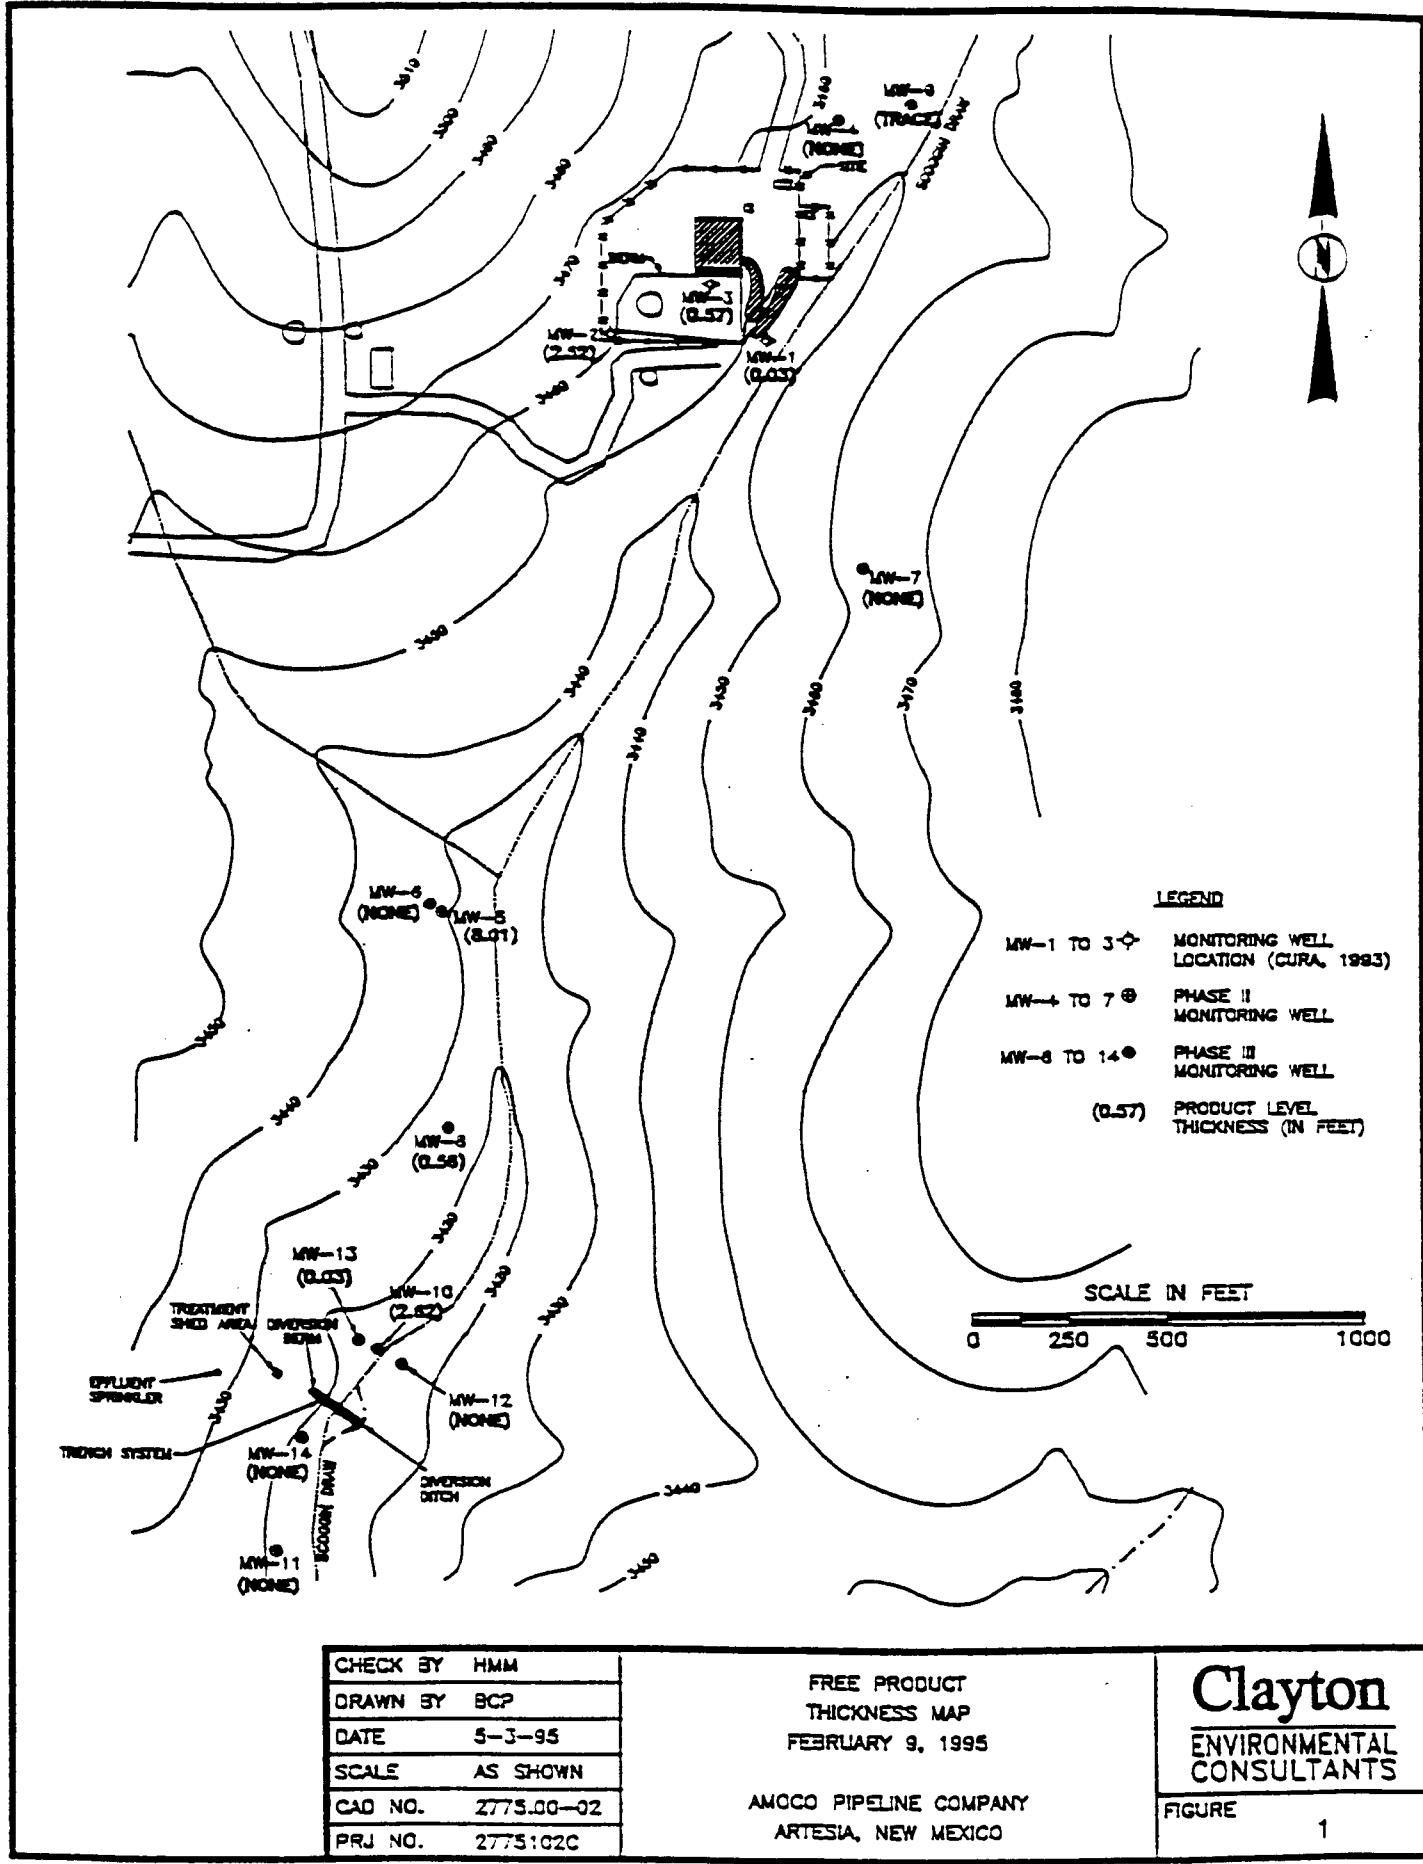

## 5.0 SOIL REMEDIATION

The soil remediation program began in early 1995. The remediation goal is TPH values of 5,000 mg/Kg, expressed as gas, diesel, or oil. The table below summarizes all results, to date:

Sampling Date	Average TPH Values (Values in mg/Kg)			
	As Gas	As Diesel	As Oil	Number of Samples
4/27/95	< 100	5,847	44,433	3
7/28/95	< 100	1,149	34,130	3
10/12/95	< 10	< 100	6,247	3
12/29/95	< 100	4,200	19,666	3
4/22/96	< 10	< 10	6,750	3
6/28/96	< 100	< 100	9,700	4
7/2/96	< 50	< 50	6,673	9
10/14/96	< 10	1,333	6,386	9

All analytical results are included in previous quarterly reports. As shown by the table, the TPH goals for gas and diesel have been met, while the TPH goal as oil has not yet been met. Disking and sampling were discontinued in November 1996 due to the low biological activity and frozen soils encountered during the winter months. Disking and sampling will begin again in the spring of 1997 until the TPH goal as oil is met.

## **APPENDIX A**

### **LABORATORY RESULTS**

- BETX Results For The Influent and Effluent Of The Air Stripper -- Samples Taken 11/10/96
- BETX Results For The Influent and Effluent Of The Air Stripper (Monthly and Quarterly Sampling) and MW-11 and MW-14 -- Samples Taken 1/10/97
- BETX and Heavy Metals and Cation/Anion Results For Monitoring Wells MW-4, MW-6, MW-7, and for MW-12, -- Samples Taken 1/15/97
- PAH Results For The Influent and Effluent To the Air Stripper -- Samples Taken 1/15/97
- PAH Results for Monitoring Wells MW-4, MW-6, MW-7, and MW-12 -- Samples Taken 1/10/97
- PAH Results For MW-11 -- Sample Taken 1/21/97
- Heavy Metals and Cation/Anion Results for the Influent and Effluent of the Air Stripper and MW-11 and MW-14 -- Samples Taken 1/10/97
- PAH Results For MW-14 -- Sample Taken 1/10/97

Enclosed is the Analytical and Quality Control reports for the following samples submitted to Bartlett Division of NET, Inc. for analysis.

Project Description: Amoco Pipeline Company

Sample Number	Sample Description	Date Taken	Date Received
383547	Influent; Grab	11/10/1996	11/12/1996
383548	Effluent; Grab	11/10/1996	11/12/1996
383549	Trip Blank		11/12/1996

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in the results column indicates the analyte was not detected at or above the reported value.
- mg/L : Concentration in units of milligrams of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per million (ppm).
- ug/g : Concentration in units of micrograms of analyte per gram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per million (ppm) or mg/Kg.
- ug/L : Concentration in units of micrograms of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per billion (ppb).
- ug/Kg : Concentration in units of micrograms of analyte per kilogram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per billion (ppb).
- TCLP : These initials appearing in front of an analyte name indicate that the Toxicity Characteristic Leaching Procedure (TCLP) was performed for this test.
- Surr: : These initials are the abbreviation for surrogate. Surrogates are compounds that are chemically similar to the compounds of interest. They are part of the method quality control requirements.
- % : Percent; To convert ppm to %, divide the result by 10,000.  
To convert % to ppm, multiply the result by 10,000.
- ICP : Indicates analysis was performed using Inductively Coupled Plasma Spectroscopy.
- AA : Indicates analysis was performed using Atomic Absorption Spectroscopy.
- GFAA : Indicates analysis was performed using Graphite Furnace Atomic Absorption Spectroscopy.
- PQL : Practical Quantitation Limit; the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

NOTE: Matrix Spike Samples may not be samples from this job.

Advisory Control Limits for MS/MSDs:

For Inorganic Parameters and GC Volatiles, the spike recovery should be 75 - 125% if the spike added value was greater than or equal to one fourth of the sample result value. If not, the control limits are not established. The RPD for the MS/MSD pair should be less than 20.

MS = Matrix Spike

MSD = Matrix Spike Duplicate

RPD = Relative Percent Difference

NET Midwest, Bartlett Division

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in the results column indicates the analyte was not detected at or above the reported value.
- mg/L : Concentration in units of milligrams of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per million (ppm).
- ug/g : Concentration in units of micrograms of analyte per gram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per million (ppm) or mg/Kg.
- ug/L : Concentration in units of micrograms of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per billion (ppb).
- ug/Kg : Concentration in units of micrograms of analyte per kilogram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per billion (ppb).
- TCLP : These initials appearing in front of an analyte name indicate that the Toxicity Characteristic Leaching Procedure (TCLP) was performed for this test.
- Surr: : These initials are the abbreviation for surrogate. Surrogates are compounds that are chemically similar to the compounds of interest. They are part of the method quality control requirements.
- % : Percent; To convert ppm to %, divide the result by 10,000.  
To convert % to ppm, multiply the result by 10,000.
- ICP : Indicates analysis was performed using Inductively Coupled Plasma Spectroscopy.
- AA : Indicates analysis was performed using Atomic Absorption Spectroscopy.
- GFAA : Indicates analysis was performed using Graphite Furnace Atomic Absorption Spectroscopy.
- PQL : Practical Quantitation Limit; the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Enclosed is the Analytical and Quality Control reports for the following samples submitted to Bartlett Division of NET, Inc. for analysis.

Project Description: Amoco Artesia Station

Sample Number	Sample Description	Date Taken	Date Received
391746	Monitor Well #12; Grab	01/15/1997	01/16/1997
391747	Monitor Well #6; Grab	01/15/1997	01/16/1997
391748	Monitor Well #7; Grab	01/15/1997	01/16/1997
391749	Monitor Well #4; Grab	01/15/1997	01/16/1997

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

NOTE: Matrix Spike Samples may not be samples from this job.

Advisory Control Limits for MS/MSDs:

For Inorganic Parameters and GC Volatiles, the spike recovery should be 75 - 125% if the spike added value was greater than or equal to one fourth of the sample result value. If not, the control limits are not established. The RPD for the MS/MSD pair should be less than 20.

MS = Matrix Spike

MSD = Matrix Spike Duplicate

RPD = Relative Percent Difference

RPD - Relative Percent Difference

Advisory Control Limits for Duplicates - RPD should be less than 20.

NET Midwest, Bartlett Division

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in the results column indicates the analyte was not detected at or above the reported value.
- mg/L : Concentration in units of milligrams of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per million (ppm).
- ug/g : Concentration in units of micrograms of analyte per gram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per million (ppm) or mg/Kg.
- ug/L : Concentration in units of micrograms of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per billion (ppb).
- ug/Kg : Concentration in units of micrograms of analyte per kilogram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per billion (ppb).
- TCLP : These initials appearing in front of an analyte name indicate that the Toxicity Characteristic Leaching Procedure (TCLP) was performed for this test.
- Surrogate : These initials are the abbreviation for surrogate. Surrogates are compounds that are chemically similar to the compounds of interest. They are part of the method quality control requirements.
- % : Percent; To convert ppm to %, divide the result by 10,000.  
To convert % to ppm, multiply the result by 10,000.
- ICP : Indicates analysis was performed using Inductively Coupled Plasma Spectroscopy.
- AA : Indicates analysis was performed using Atomic Absorption Spectroscopy.
- GFAA : Indicates analysis was performed using Graphite Furnace Atomic Absorption Spectroscopy.
- PQL : Practical Quantitation Limit; the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Enclosed is the Analytical and Quality Control reports for the following samples submitted to Bartlett Division of NET, Inc. for analysis.

Project Description: Amoco Artesia Station

Sample Number	Sample Description	Date Taken	Date Received
391309	Influent; Grab	01/10/1997	01/14/1997
391310	Effluent; Grab	01/10/1997	01/14/1997

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in the results column indicates the analyte was not detected at or above the reported value.
- mg/L : Concentration in units of milligrams of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per million (ppm).
- ug/g : Concentration in units of micrograms of analyte per gram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per million (ppm) or mg/Kg.
- ug/L : Concentration in units of micrograms of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per billion (ppb).
- ug/Kg : Concentration in units of micrograms of analyte per kilogram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per billion (ppb).
- TCLP : These initials appearing in front of an analyte name indicate that the Toxicity Characteristic Leaching Procedure (TCLP) was performed for this test.
- Surr: : These initials are the abbreviation for surrogate. Surrogates are compounds that are chemically similar to the compounds of interest. They are part of the method quality control requirements.
- % : Percent; To convert ppm to %, divide the result by 10,000.  
To convert % to ppm, multiply the result by 10,000.
- ICP : Indicates analysis was performed using Inductively Coupled Plasma Spectroscopy.
- AA : Indicates analysis was performed using Atomic Absorption Spectroscopy.
- GFAA : Indicates analysis was performed using Graphite Furnace Atomic Absorption Spectroscopy.
- PQL : Practical Quantitation Limit; the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Enclosed is the Analytical and Quality Control reports for the following samples submitted to Bartlett Division of NET, Inc. for analysis.

Project Description: Amoco Artesia Station

Sample Number	Sample Description	Date Taken	Date Received
391725	MW-12; Grab	01/15/1997	01/16/1997
391726	MW-6; Grab	01/15/1997	01/16/1997
391727	MW-7; Grab	01/15/1997	01/16/1997
391728	MW-4; Grab	01/15/1997	01/16/1997

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

NOTE: Matrix Spike Samples may not be samples from this job.

Advisory Control Limits for MS/MSDs:

For Inorganic Parameters and GC Volatiles, the spike recovery should be 75 - 125% if the spike added value was greater than or equal to one fourth of the sample result value. If not, the control limits are not established. The RPD for the MS/MSD pair should be less than 20.

MS = Matrix Spike

MSD = Matrix Spike Duplicate

RPD = Relative Percent Difference

NET Midwest, Bartlett Division

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in the results column indicates the analyte was not detected at or above the reported value.
- mg/L : Concentration in units of milligrams of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per million (ppm).
- ug/g : Concentration in units of micrograms of analyte per gram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per million (ppm) or mg/Kg.
- ug/L : Concentration in units of micrograms of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per billion (ppb).
- ug/Kg : Concentration in units of micrograms of analyte per kilogram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per billion (ppb).
- TCLP : These initials appearing in front of an analyte name indicate that the Toxicity Characteristic Leaching Procedure (TCLP) was performed for this test.
- Surr: : These initials are the abbreviation for surrogate. Surrogates are compounds that are chemically similar to the compounds of interest. They are part of the method quality control requirements.
- % : Percent; To convert ppm to %, divide the result by 10,000.  
To convert % to ppm, multiply the result by 10,000.
- ICP : Indicates analysis was performed using Inductively Coupled Plasma Spectroscopy.
- AA : Indicates analysis was performed using Atomic Absorption Spectroscopy.
- GFAA : Indicates analysis was performed using Graphite Furnace Atomic Absorption Spectroscopy.
- PQL : Practical Quantitation Limit; the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Enclosed is the Analytical and Quality Control reports for the following samples submitted to Bartlett Division of NET, Inc. for analysis.

Project Description: AMOCO ARTESIA STATION

Sample Number	Sample Description	Date Taken	Date Received
392836	MW-11; Grab	01/21/1997	01/23/1997

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

NOTE: Matrix Spike Samples may not be samples from this job.

Advisory Control Limits for MS/MSDs:

For Inorganic Parameters and GC Volatiles, the spike recovery should be 75 - 125% if the spike added value was greater than or equal to one fourth of the sample result value. If not, the control limits are not established. The RPD for the MS/MSD pair should be less than 20.

MS = Matrix Spike

MSD = Matrix Spike Duplicate

RPD = Relative Percent Difference

NET Midwest, Bartlett Division

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in the results column indicates the analyte was not detected at or above the reported value.
- mg/L : Concentration in units of milligrams of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per million (ppm).
- ug/g : Concentration in units of micrograms of analyte per gram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per million (ppm) or mg/Kg.
- ug/L : Concentration in units of micrograms of analyte per liter of sample. Measurement used for aqueous samples. Can also be expressed as parts per billion (ppb).
- ug/Kg : Concentration in units of micrograms of analyte per kilogram of sample. Measurement used for non-aqueous samples. Can also be expressed as parts per billion (ppb).
- TCLP : These initials appearing in front of an analyte name indicate that the Toxicity Characteristic Leaching Procedure (TCLP) was performed for this test.
- Surr: : These initials are the abbreviation for surrogate. Surrogates are compounds that are chemically similar to the compounds of interest. They are part of the method quality control requirements.
- % : Percent; To convert ppm to %, divide the result by 10,000.  
To convert % to ppm, multiply the result by 10,000.
- ICP : Indicates analysis was performed using Inductively Coupled Plasma Spectroscopy.
- AA : Indicates analysis was performed using Atomic Absorption Spectroscopy.
- GFAA : Indicates analysis was performed using Graphite Furnace Atomic Absorption Spectroscopy.
- PQL : Practical Quantitation Limit; the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Enclosed is the Analytical and Quality Control reports for the following samples submitted to Bartlett Division of NET, Inc. for analysis.

Project Description: Amoco Artesia Station

Sample Number	Sample Description	Date Taken	Date Received
391397	Influent	01/10/1997	01/15/1997
391398	MW-11; Grab	01/10/1997	01/15/1997
391399	MW-14; Grab	01/10/1997	01/15/1997
391400	Effluent	01/10/1997	01/15/1997

Sample analysis in support of the project referenced above has been completed and results are presented on the following pages. These results apply only to the samples analyzed. Reproduction of this report only in whole is permitted. Please refer to the enclosed "Key to Abbreviations" for definition of terms. Procedures used follow NET Standard Operating Procedures which reference the methods listed on your report. Should you have questions regarding procedures or results, please do not hesitate to call. NET has been pleased to provide these analytical services for you.

This Quality Control report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

NOTE: Matrix Spike Samples may not be samples from this job.

Advisory Control Limits for MS/MSDs:

For Inorganic Parameters and GC Volatiles, the spike recovery should be 75 - 125% if the spike added value was greater than or equal to one fourth of the sample result value. If not, the control limits are not established. The RPD for the MS/MSD pair should be less than 20.

MS = Matrix Spike

MSD = Matrix Spike Duplicate

RPD = Relative Percent Difference
