INTRODUCTION

Environmental Technology Group, Inc. (ETGI), on behalf of EOTT Energy Corp. (EOTT), prepared this annual report in compliance with the New Mexico Oil Conservation Division (OCD) letter of May 1998, requiring submittal of an annual report by April 1 of each year. The report presents the results of the quarterly ground water monitoring events only. For reference, the Site Location Map is provided as Figure 1.

Ground water monitoring was conducted during four quarterly events in calendar year 2000 to assess the levels and extent of dissolved phase and phase-separated hydrocarbon (PSH) constituents. The ground water monitoring events consisted of measuring static water levels in the monitoring wells, checking for the presence of PSH, and purging and sampling of each well exhibiting sufficient recharge. Monitoring wells containing measurable levels of PSH were not sampled.

FIELD ACTIVITIES

The site monitoring wells were gauged and sampled on February 2, 3, and 16, June 9, July 13, September 20, and December 20, 2000. During each sampling event, the monitoring wells, designated to be sampled, were purged of approximately 3 well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Ground water was allowed to recharge and samples were obtained using disposable Teflon samplers. Water samples were stored in clean, glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Pate Trucking, Hobbs, New Mexico, utilizing a licensed disposal facility (OCD AO SWD-730).

GROUND WATER GRADIENT

Locations of the monitoring wells and the inferred ground water gradient, as measured on December 19, 2000, are depicted on Figure 2, the Site Ground Water Gradient Map. The ground water elevation data are provided as Table 1. Ground water elevation contours, generated from the final quarterly event of calendar year 2000 water level measurements, indicated a general gradient of approximately 0.008 ft/ft to the southwest as measured between ground water monitoring wells MW-22 and MW-31. The depth to ground water, as measured from the top of the well casing, ranged between 14.64 to 22.35 feet for the shallow alluvial aquifer.

A measurable thickness of PSH was detected in monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-16, MW-23 and MW-32 during the annual monitoring period. A maximum thickness of 0.11 feet in monitoring well MW-1, 0.29 feet in monitoring well MW-2, 0.93 feet in monitoring well MW-4, 0.31 feet in monitoring well MW-5, 0.46 feet in monitoring well MW-6, 0.91 feet in monitoring well MW-7, 0.29 feet in monitoring well MW-8, 1.39 feet in monitoring well MW-12, 0.48 feet in monitoring well MW-16, sheen in monitoring well MW-23, and 0.09 foot in monitoring well MW-32 was measured and is shown on Table 1.

LABORATORY RESULTS

Ground water samples obtained during the sampling events were hand delivered to Environmental Laboratory of Texas, Midland, Texas, for determination of benzene, toluene, ethyl benzene and total xylenes (BTEX) concentrations by EPA Method SW846-8021B. The ground water chemistry data are provided as Table 2 and the Laboratory Reports are provided as Appendix A.

Laboratory results for all of the site ground water samples, obtained during the calendar year 2000 monitoring period, indicated that Benzene concentrations were above regulatory standards for monitoring wells MW-3, MW-9, MW-11, MW-13, while BTEX concentrations were below regulatory stands. Benzene and BTEX concentrations contained in monitoring wells MW-10, MW-14, MW-17, MW-18, MW-20, MW-21, MW-30, MW-31, and MW-34 were below regulatory standards. The remaining monitoring wells were below method detection limits for Benzene and BTEX.

SUMMARY

This report presents the results of monitoring activities for the annual monitoring period of calendar year 2000. A measurable thickness of PSH was detected in monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-16, MW-23 and MW-32 during the annual monitoring period. A maximum thickness of 0.11 feet in monitoring well MW-1, 0.29 feet in monitoring well MW-2, 0.93 feet in monitoring well MW-4, 0.31 feet in monitoring well MW-5, 0.46 feet in monitoring well MW-6, 0.91 feet in monitoring well MW-7, 0.29 feet in monitoring well MW-8, 1.39 feet in monitoring well MW-12, 0.48 feet in monitoring well MW-16, sheen in monitoring well MW-23, and 0.09 foot in monitoring well MW-32 was measured in the monitoring wells.

Ground water elevation contours, generated from the final quarterly event of calendar year 2000 water level measurements, indicated a general gradient of approximately 0.008 ft/ft to the southwest as measured between ground water monitoring wells MW-22 and MW-31.

Laboratory results for all of the site ground water samples, obtained during the calendar year 2000 monitoring period, indicated that Benzene concentrations were above regulatory standards for monitoring wells MW-3, MW-9, MW-11, MW-13, while BTEX concentrations were below regulatory stands. Benzene and BTEX concentrations contained in monitoring wells MW-10, MW-14, MW-17, MW-18, MW-20, MW-21, MW-30, MW-31, and MW-34 were below regulatory standards. The remaining monitoring wells were below method detection limits for Benzene and BTEX.
