If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Tubing and rods were pulled from this well. Tubing was found to be set at 525'. This confirms that t.d. shown on old sundry notices (570') was approximately correct. These sundries also showed that 75 sks. of cement was used to cement the 7" above an open hole packer set at 380'. Cement should have circulated to surface if an 8-3/4" hole was drilled.

Plan to plug well by filling 7" casing with Class B cement from surface to 570'.

We request an extension of time until 12/7/98 to respond to your demand that this well be plugged. Your original letter gave us until 11/6/98 to submit plans to plug. Recent heavy rains have washed out access to this location. While we may still be able to meet your original deadline, it now appears that it's going to be close. We must get a rig into the well and pull the rods and tubing to determine how the plugging procedure will be written. We have little information on the configuration of the wellbore. Since we will have a rig on location, we will most likely get your approval and commence plugging operations immediately.
